NEWS IN BRIEF

Bar on GEC strikers

A HIGH COURT injunction bars GEC's striking operators from all the company's Coventry works, as the operators' pay dispute remains unresolved. GEC took legal action after operators staged a sit-in at the engineers' section of the Stole, Coventry plant on May 23 and later occupied the computer room. The strike arose on February 24, because the operators are unhappy with the pay rises offered by the company and it became an official ASTMS matter on March 20.

London is new HQ

THE US-BASED manufacturer of IBM 3350 replacement disc drives, Storage Technology, has, as expected, opened a London office (CW February 18) which becomes the firm's European headquarters. Storage Technology also manufactures main store extensions for IBM 370 computers.

Edutronics switch

The assets of Edutronics Systems International, the US computer training materials manufacturer, have been acquired by McGraw-Hill, the publishers, for an undisclosed amount.

Thirtieth Argus

A MONITORING system based on a 12K word Ferranti Argus 7005 processor will evaluate the performance of a 500 Megawatt coal fired boiler and turbine unit at Fiddler's Ferry Power Station in the CEB's North Western Region. Worth over £200,000, this brings the total of Argus systems in power generation applications to 30.

HPA CORAL 66 (RMCS CORAL 66)
PDP-11s (LSI-11) — under RSX-11M, RSX-11D
RT-11, IAS, DOS — with FLOPPY or DISC SYSTEMS

We hope our potential customers who were sceptical of our claims for our CORAL 66 package have overcome their disbelief. We welcome competition and criticism. The user will decide on the good points — we are happy to try to eliminate any irritations. If the RSRE run-time benchmarks are anything to go by, the HPA CORAL 66 compiler, on a PDP-11/70 with cache memory (9800s) under RSX-11M (Version 3), has produced aggregate timings of 49.38 seconds. Of course, users run their own benchmarks — there is far more to our compilers than mere speed and real-time programming. A competitive compiler is available on Computer Automation's LSI-2 and another soon to be released for the NM4 series — cross-compilers also available.

COMPUTER WEEKLY

Birthday honours go to Dorey and Ellis

EXPORT achievements by the computer industry were recognised in the Queen's Birthday Honours list by awards to Peter Dorey of Ferranti and Peter Ellis of ICL.

Dorey, who is appointed a CBE, is a director of Ferranti and managing director of Ferranti Computer Systems Ltd, a recently created grouping taking in all the company's computer and microprocessor activities. He was responsible for building up Ferranti's business in the military field and has also been closely involved in the joint venture with the Brazilian government and industry to build Argus computers in Brazil.

Peter Ellis, who is awarded the OBE, is ICL's director of worldwide marketing. He joined Powers-Samas in 1951 and

when that company merged with British Tabulator he formed the first programming group. He played a leading part in ICL in 1960 product planning and when ICL was formed in 1968 he became director of accounts, planning and commercial areas. He took over his marketing role in 1970.

Other honours include knightships for Robert Telford, managing director of GEC-Marconi Electronics, and for Amos Chilver, vice-chancellor of Cranfield Institute of Technology.

The MBE has gone to J. G. Walker, a personnel officer at IBM's Greenock plant, and the BEM has been awarded to H. D. Steven, a technical officer with the maintenance division in Edinburgh telephone area.

Peter Dorey

'Computers could halt government'

THE vulnerability of large government computer centres to disruption which could bring the business of various departments to a halt, is highlighted in a report prepared by senior civil servants. Strike action is among the dangers mentioned by the report.

However, trade unions representing civil servants say that although computer centres are useful targets for effective action, such action could not have the disastrous consequences that had been suggested.

The report is called "The Longer Term Review of Administrative Computing in Central Government" and was prepared by a committee under the chairmanship of Richard Wilding, deputy secretary in the Civil Service Department, which includes the Central Computer Agency. The study was initiated partly because of the criticism about large government computer projects, such as the Swansea Vehicle Licensing Centre.

It appears as part of a widespread cooling of enthusiasm towards wholesale introduction of computers and the government is expected to be less eager in future to introduce massive computer systems that may be made out of date by changing technology before they are ready for use.

In particular, there is much heated discussion at present over whether to computerise the collection of income tax, and this report may well swing the argument against computers.

Commenting on the report, the Civil and Public Service Association said that any computer system could be replaced by manual back-up if necessary and strikes by computer staff would act mainly as an irritant to the government.

The Society of Civil and Public Servants, the next largest Civil Service union said that they were taking a militant policy on pay, and that they were committed to taking industrial action if the Government did not establish a pay research system. Computers would certainly be one of the areas involved, a spokesman said.

He pointed out that wastage of government computer staff at present was very high, because of the difference in pay levels between the public and private sectors. Some installations were losing 40% of their programming staff a year.

Logica gets extension to Saudi work

MANAGEMENT and systems consultants Logica, together with consulting engineers Frederic R. Harris, have gained a second year extension worth £1.5 million of a contract for cost estimating and budget evaluation from the Royal Commission for Jubail and Yanbu in Saudi Arabia.

The contract covers provision of services and development of systems, including evaluation of the benefits of using computers to replace the present manual systems.

Said to be the world's largest construction project, the twin new cities of Jubail and Yanbu are planned to have eventual populations of 150,000 each and the development programme involves about 200 different kinds of construction project.

US range additions

A SMALL business system is to be marketed by National Semiconductor in the US, as an addition to its operations in IBM-compatible computers and add-on memories.

The 1780 has passed all its reliability tests and preproduction models will be undergoing final checks next month.

ASTMS highlights its strength in industry

DISCUSSION with NCR on grading and pay for engineers and a statement of its dominance, in terms of membership, within ICL are two of the highlights of ASTMS activity in the computer industry this week.

A joint meeting to be held between NCR and ASTMS tomorrow (Friday) at NCR's London head office to discuss a proposed new job grading plan and salary scales for 800 field engineers.

Talks held last month broke down and the union negotiating team recommended that the engineers take industrial action (CW, June 1), but this has not yet been voted on. A second meeting will be held tomorrow afternoon at which ASTMS representatives in NCR will discuss the situation further.

On another front, Tim Webb, national officer for ASTMS, has asked that a meeting with the

Workers to be laid off by NCR at Dundee

A SWITCH in manufacturing policy by NCR will result in a considerable number of redundancies of the company's Dundee plant. Microprocessor boards for the 8100 family of small computers were to have been produced at Dundee both for the Augsburg plant in Germany, where the 8100 is built, and as a second source supply in the Common Market.

General manager at Dundee, Dick MacDonald, said the change of plan had become necessary because of "further technological simplification" of the microprocessor and 8100 manufacturing. The end product would now have less labour content and "it would thus be uneconomic to involve two European centres."

He said it was not possible to say at present how many redundancies would be involved because it would likely that some people would need to be transferred to other products that were expanding.

Dundee is the sole supplier in Europe of the 8100 series and the 8400 mini 8500 Criterion systems.

There is also the 24-hour self-service banking terminal, the 1780, which was entirely designed and developed at Dundee and has already attracted the attention of US and Canadian banking organisations.

The 1780 has passed all its reliability tests and preproduction models will be undergoing final checks next month.

The long, long registration queues were one of the features of the NCC this year. Some visitors had to wait up to four hours to sign up.

Briefing
Warning on Cobol 80 costs

USERS may be faced with enormous Cobol conversion costs if the expected new Cobol 80 standards emerge from Codasyl in a few years, according to Paul Oliver, of the US Navy's Cobol compiler testing service.

Speaking at the NCC in Anaheim, he said the new standards might be as different from Cobol 74 as the standard was from Cobol 68. He suggested costs of possibly \$1 a line of code for conversion.

Captain Grace Hopper, who pioneered the development of compiler validation procedures, believes that this work must now be taken up by wider user community insisting upon standardisation.

See Software File, page 7.

Microwriter oash

FUNDING in the region of £200,000 is to be provided by Hambro Life Assurance for the Microwriter, the pocket word processor invented by Cy End field (CW, May 11). A team to manage production and marketing of the Microwriter is being set up and exploratory talks have started, in particular with consultancy Logica.

Profile for Dutoh

THE Dutch PTT has followed the West German Bundespost in buying a version of the Post Office's Prestel videodata software and a 4080 minicomputer from DEC. The sale involves a revision of the PTT's software and the PTT has taken an option to buy the public service software later.

\$3,000 saving

AN architect working for Trent Regional Health Authority has won an award of £25 for coming up with the idea of a computerised register of architectural drawings that has saved the authority \$3,000 in one year.

The system was developed by the Authority's computer department and has been applied to the construction of new district general hospitals at Chesterfield and Olney.

Testing time

FIRST examples of a Motorola 6800 microprocessor processed at the company's East Kilbride factory are now being tested. These are the first to be produced by the company outside America, and will probably go through a programme when an integrated programme for the 68000 plant is completed.

First electronic paper this year

THE world's first electronic newspaper, transmitting information digitally in its readers, could be in operation by the end of the year in the San Francisco Bay area, and the system, called Digicast, could be of interest to the United Nations for assisting in technological understanding and decision making.

The initial target of Digicast is the home computer user but it also offers many of the applications now being provided by information services such as viewdata.

Personal computing pioneer Jim Warren Jr, who is developing Digicast, said that the aim was to help people cope with the vast amount of information being produced by using computers, to do the initial scanning of the "newspaper."

Digicast would be transmitted using FM radio frequencies. Warren, founder of the West Coast Personal Fair, and editor of Dr Dobbs's Journal of Computer Calisthenics and Orthodontia, said that a terminal for use with the system would cost about \$100. The Digicast operation would be run on the lines of a newspaper, but the information collected would be transmitted virtually unedited to its "readers."

One "page" of text would be transmitted over the system every two minutes with the information being continually updated. A home computer would be used to "listen in" to the broadcast and select information according to predetermined criteria, for example, criminal records. Similar police systems are to be adopted by Dumfries and Galloway Regional Council, which intends to upgrade its 2903 to a 2904, and Highland Regional Council which will be adding two EDS 900 disc units and two ICL 7502 communications processors to its 2904.

Hoping, in the longer-term, to introduce online facilities for its district authorities, Fife Regional Council has opted to replace its ICL 1903A system with a 2980.

The final council, Grampian, will shortly be switching its ICL 1902T to a 2980.

A major reason for the councils' switching with ICL is believed to be the attraction of being able to run programs developed on the older machines on the new models under ICL's Direct Machine Environment firmware emulator.

All the systems will be delivered within 12 months.

Personal computers add spice

DESPITE a major challenge from semiconductor manufacturers and the mass-market gnawings of the personal computer market, the traditional computer industry put on its most prosperous face last week for the US National Computing Conference at Anaheim, California. The show has expanded to an unwieldy state and there were four-hour registration queues each day outside the conference centre. At the end of the four days nearly 60,000 people had attended the event.

The main excitement and tang of new ideas came from the growing "fringe" event, the Personal Computing Festival, held this year in the Disneyland Hotel. And the most significant conference messages came from the "outsiders," the semiconductor manufacturers which increasingly are encroaching upon traditional computer preserves.

It was fitting that two pioneers of semiconductor, Dr Gordon Moore and Robert Noyce, of Intel won the 15th Harry Goode Award which honours the individuals who have made extraordinary contributions to developments in information processing. It is sponsored by the NCC organisers, the American Federation of Information Processing Societies.

A contents addressable file store costing about \$500, for attachment to a micro system; a high quality full colour display for \$1,395; a micro-based Monopoly game; and a micro-mouse maze competition were typical of the blend of almost unbelievable new commercial products and fun ideas at the personal computer show.

The potential of the booming new market appears to be unlimited, but a warning note was struck by Pertec chairman Roy Peppas, who said there were bound to be some major commercial setbacks as the hobbyist and personal market grew rapidly towards maturity.

On the wider industry position, a key conference session was devoted to the impact of semiconductors on computer architecture.

Speakers from the solid state.

See Turn to page 2.

CIS Cobol adopted for R2E Miorals

FRENCH microcomputer pioneer R2E, in which CII-Honeywell Bull has now taken a 60% share, is to adopt the CIS Cobol compiler from UK systems house Micro Focus, for its Mioral range which is based on Intel 8080 and Zilog Z80 micro. It was announced at the NCC that in the first year the contract will be worth £25,000.

CIS Cobol has already been adopted by Tandberg of Norway for its intelligent desk-top terminals and by ICL for the 1500 series.

Scots to spend £6m on 2900s

ORDERS worth over £6 million for ICL 2900 systems — to replace older ICL equipment and to meet increased workloads — have been made by six Scottish regional councils.

Highland Regional Council is to replace its System 4 with an ICL 2970 and a 2980, and one of the major applications will be a system for expenditure control.

Tayside Regional Council intends to replace its ICL 1902S and 1902T systems with an ICL 2960 and develop its police information system which holds

Design Brief

Micro Logic is Data Logic's microprocessor division. They apply microtechnology to real situations. They advise, design and assemble. Almost certainly, if anything can be done with micros they can do it.

One of Micro Logic's clients had a very special requirement. One hundred portable systems, each to contain a processor and store, a floppy disc drive, a visual display unit with keyboard, and a printer. Why so special? Because the application called for each unit to weigh less than 20 lbs and to fit into a container no bigger than a standard briefcase.

Microprocessors open up completely new areas for computing. But they demand a whole new way of thinking. Micro Logic knows how to think small. And creatively.

APPOINTMENTS PAGES 23-54

IT was a long time ago that Mark Twain said, "Everybody talks about the weather but nobody does anything about it." Today he might put it "Everybody talks about the Social Impact of the Microprocessor Revolution but..." And he would be right. The Labour Party, under the leadership of Tony Benn, is talking about it; there are two groups of Tory MPs talking about it; the TUC prompted by ASTMS, is talking about it, and several pundits have made speeches that have been reported with much solemnity in the Press, all agonising over our seemingly inevitable large-scale unemployment, to go with the large-scale integration.

Everybody is talking about it...

with the problem, the official Conservative group has engaged its external technical adviser Professor Donald Michie, a life-long Socialist. The other group, for backbenchers, had some difficulty organising its first meeting. The invitations, it seems, had computer chips taped to them for added impact, and several MPs mistook them for letter bombs.

Even in the wilds of Saskatchewan a "Social Impact" committee has been formed. The National Enterprise Board, on the other hand, is thinking of setting up a rival Silicon Valley in the North of England. They may experience some difficulty — Germanium Dale does not have quite the same ring about it, and it would not be surprising if our expatriate engineers were reluctant to exchange Palo Alto for Huddersfield. This is, of course, working to aggravate the Social Impact problem rather than relieve it.

Meanwhile the prophetesses of

doom continue to fall like Bob Dylan's Hard Rain, and talk of abundance of work being in privilege by the end of the century, a mind-boggling concept for those of us whose days could easily be 36 hours long without exhausting the supply of things that needed to be done.

Interestingly enough, there are those who say new technology will present the opposite problem regarding employment. Harry Belsey, of BP, pointed out last week that Prestel alone will carry a million pages of text, and many similar systems will doubtless spring up. "Where are we going to get the keyboarding effort to fill all those pages?" he asks. Alan Benjamin has pointed out that electronics has created three and a half million new jobs in the US since 1965.

The visions of gloom are based on what economists call the "Lump of Labour Fallacy" — the notion that there is a fixed amount of work to be done in the world, and people displaced by machines will inevitably have

nothing else to do. In fact, as can be seen from the history of the first Industrial Revolution, technological changes produce entirely new industries that no one had dreamt of before, and there is every reason to believe this can happen with the Second Revolution, too. Just reflecting on the state of most of the world, one realises there is a great deal still to be done.

What will certainly happen is that fewer jobs will involve purely mechanical operations, and more will involve creativity and the making of value judgments, and this is all to the good. It will, however, have traumatic effects on much of the working population.

The talk will doubtless continue. Hopefully it will develop along more positive and practical lines than all the wailing and gnashing of teeth we have heard hitherto. Then eventually there might even be some action.

For the present, let the last word be this story, currently going the rounds of the Post Office Engineering Union:

"What is the staffing level for the new System X exchange?"
"One man and a dog."
"What does the man do?"
"Feed the dog."
"What does the dog do?"
"Make sure the damn fool man never touches the equipment."

MORE FROM ANAHEIM

Compucolor II—the most talked-about system at the NCC

"I HAVE not been so excited by a new product since I first saw the shinning system being demonstrated," was the reaction of experienced British computer users to one of the most talked-about systems on show at the NCC, at Anaheim last week — the Compucolor II personal computer system.

The high definition, high quality colour display of the Compucolor II, including simple to use picture-building capabilities, which had a dramatic impact on the crowds at the Compucolor Corp stand, makes the system ideal for the educational as well as home and business markets.

After viewing the system, many of the NCC visitors said that it would be difficult to go back to plain grey and white screens.

Like many of the other exhibits in the personal computing fair, the Compucolor II's price is perhaps its most amazing factor. A basic configuration costs only \$1,395 for a system including 6K of random access memory, a 32-line x 84-character display, 75K bytes of mini disk storage, a Basic compiler and vector software. The system is based on an Intel 8080. In the two months since it was announced, the Compucolor has taken about 1,700 orders and a production line is currently being set up in Norcross, Georgia, to produce about 150 a month. First deliveries are due this month.

Compucolor applications engineer Ron Westmoreland told Computer Weekly that the system is likely to be introduced to Europe in about six to eight months, by which time the company could cope with the expected increase in demand.

Compucolor applications engineer Ron Westmoreland told Computer Weekly that the system is likely to be introduced to Europe in about six to eight months, by which time the company could cope with the expected increase in demand.

Personal computers

● From front page. Companies made it clear that there was the possibility of a bloody battle between them and the computer manufacturers as the semiconductor makers increasingly become systems, rather than components, suppliers.

Loud applause greeted Bob Helms, assistant general manager of semiconductors at Motorola, when he summarised

ICL 2972 offers 50% more power

TO ward off increasing competition, primarily from IBM with its low-cost 303X computers, ICL has introduced a new machine, the 2972, and an enhanced version of the 2976, both of which employ low-cost 16K bit memory chips.

The 2972 costs only slightly more than the 2970, but offers about 50% more power. And like the 2976, the 2972 has the same order code processor as the 2980.

As expected, one of the first customers for the 2972 will be Oxfordshire County Council (CW, June 8), which is having a 25 Megabyte system. The 2972 will provide Oxfordshire with more than three times the processing power of the 1904S it is replacing.

The council says that it will need the extra capacity for the telecommunications network that it is implementing.

To make program conversion easier for the 2972 or 2976 customer, ICL has also introduced an enhanced version of the 'Direct Machine Environment' emulator called DME+. This enables a 2980 order code processor running 1900 or System 4 programs under DME to share a common storage system with a 2972 or 2976, operating under VME/B.

In this way the user can enjoy DME facilities without having to install a complete 2980 system, and can phase out the 2980 processor when conversion to VME/B is complete.

DME+ also offers 25% better performance than the basic

DME/1900, whether it is used when the 2980 is associated with a 2972 or 2970 or when the 2980 is operating in stand-alone mode.

The storage systems supplied with the 2972 and the new 2976 have the same type of store access controller and store multiple access control, but the main store of the 2976 is faster because it is interleaved. The maximum main memory size on the new 2976 is eight Megabytes and the overall performance of the new machine is about 20% better than the existing 2970.

ICL points out that the new 16K bit chip store can be used to enhance the 2970 and the older 2976. A 2 Megabyte store using the 16K bit chips occupies only two cabinets, while the 1K bit chip memory supplied with the older 2976 required six cabinets to provide the same capacity.

A basic single system 2972 costs between £1.3 million and £1.8 million, while a basic 2970 single system ranges from £1.5 million to £2 million.

An option for the new and the older 2976, just introduced by ICL, is the ability to enhance on-site in a dual system. Also available now as options for the 2972 and 2970 are a fast multiply/divide unit and a micro-ended maths library.

These will improve the performance of programs compiled by the OFC60, optimising Fortran compiler, and programs that make extensive use of multiply and divide operations.

● Another new product announced by ICL is a 6250 bpi density magnetic tape system, the MT 1250, which can be used with 2970, 2972, 2976 and 2980 systems running under VME/B. The MT 1250 provides up to four times the data transfer rate of 1600 bpi tape systems and uses the group code recording format.

'Students put off by unions'

BRIGHT students are being put off going into engineering by requirements for trade union membership, claims the Engineering Professors' Conference.

In its submission to the Finniston Committee investigating the engineering profession, the professors attack efforts both by the unions and the Engineering Employers' Federation to push professionals, graduate engineers into the engineering unions.

Hughes to chair advisory committee

A TECHNICAL advisory committee has been set up by the National Computing Centre, under the chairmanship of Philip Hughes, chairman of Logica. The committee will advise the NCC's director, David Finniston, on technical matters, and its recommendations will be reported by him to the full National Computing Centre board.

Hughes said that the NCC had established itself as a widely accepted authority on computing matters, but the constant impact of new technologies meant that it was necessary continually to review and develop its role.

He saw the advisory committee as having an important part to play in the NCC's future.

Hughes has previously served on committees of the Science Research Council and as a member of the Computers, Systems, and Electronics Requirements Board. He was one of those responsible for founding Logica nine years ago.

The names of the other members of the committee have yet to be announced.

Also under consideration, as an alternative strategy, is a purchase agreement with one of the existing public memory manufacturers.

Univac bubble memories decision

A DECISION is expected within six months from Univac whether to start in-house manufacture of bubble memories. The company's main interest stems from the Defence Systems Division, but if commercial side of the company could be expected to use the devices also.

Also under consideration, as an alternative strategy, is a purchase agreement with one of the existing public memory manufacturers.

FOCUS

BY now Focus would have thought that the Post Office had got the industry message. But at last month's DPMA Conference, Practical Communications, two representatives of the Post Office were noticeably sitting in the front row.

No doubt their subsequent report to the Post Office Establishment was gloomy. In fact, they could hardly have chosen a more hostile venue. "Knock Out Post Office" was very much the theme of the day. As far as the DP industry is concerned, Post Office lines of communication are certainly crossed. Good words for the Post Office were few and far between — adverse comments being in multiplex mode. The conference was perhaps mistitled. A more realistic theme could well have been "Before setting up a data network, first sort out the Post Office."

The Post Office apparently offers not so much a guiding hand, but a restraining boot. Predictably, John McNulty from Modular Technology, had some harsh comments. "The future

for datcom was glorious and exciting. The only handicap to progress was the UK Post Office."

John McNulty did not criticise the Post Office in making a vast profit, providing it was not achieved on a monopolistic basis and that large-scale users were not subsidising the smaller user.

The Post Office Act has turned out in practice to be a total wrong number. It is a rag-bag of an Act which incidentally, appeared to be contrary to the EEC mandate which stipulates that monopolies — both private and State — must not act unfairly.

Consultant Iann Barron was equally forthright. Post Office charges he declared, are not based on cost but on what the market can bear. In effect, the Post Office pension fund seems to be dictating the policy. Technology should be the means of reducing costs, not as the Post Office prefers, a method of extracting ever greater sums from users.

Dr Adrian Stokes from Langton Information, kept his head well down in the Post Office

stakes, and limited his talk to the impact of communications on computing. His suggestion, however, that the telecommunication method of communication was the ultimate solution, was challenged from the floor.

By now delegates to such conferences know what to expect. Praise and congratulations will be in short supply. The fact that most present will achieve much, despite near-insurmountable odds will go unrecognised. Such odds include devious DP teams, hesitant management, unhelpful users and reluctant machines. No wonder with all these problems, polite communication is seldom feasible.

Similarly, it seems that the Post Office gets all the kicks. Ignored are the often highly competent engineers in the field. Post Office Acts; at this level, could well involve working beyond the calls of duty (or unions) with a large dose of personal involvement. Somehow the Post Office lines always seem to get crossed. Buzby would be better employed bug-ging the Post Office higher executive than the TV viewer.

Likewise, the DPMA would have been better advised in the interests of the whole industry, to have included a senior official from the Post Office itself purely to keep the balance.

Confrontation on this scale would have achieved much in the arena of practical communications.

INTERRUPT

ONE day, a programmer, having nothing much to do at the time, amused himself by writing a program whose sole function was to keep on changing its own ID.

He tested it and it worked very well. The trouble was that, when he tried to delete the program, as soon as he had discovered its current ID this had been changed to something else. The only way that the program could be deleted was by means of a hack.

The Moral: Don't start something that you can't stop.

Storage Technology Corporation of Colorado USA is pleased to announce the establishment of its U.K. Subsidiary STORAGE TECHNOLOGY LIMITED

STORAGE TECHNOLOGY is the world's largest manufacturer of high density tape drives and a leader in high performance disk drives.

STORAGE TECHNOLOGY would like to tell you more about their complete range of highly competitive products which include:

3420 series compatible tape drives
3350 series compatible disk drives
370 series, main storage extension

IBM typewriters launch

TWO new electronic typewriters are soon to be introduced in the US by IBM. Called models 50 and 55, they will have internal memory for a single line of text and one or two pages respectively, and are intended to compete directly with the Qyx low-cost word processor launched earlier this year by Exxon (CW, Feb 23 and April 6).

Unlike Qyx with its delay wheel, the IBM machines will

have golf ball typing elements, thereby utilising the large stock of golf balls already in existence. This is despite the fact that IBM has already introduced a delay wheel printer (made by Qume) to its Office System 6 word processor range.

The launch is expected at the Syntexcon word processing exhibition in Washington later this month.

Total for Series 1 this year

A NEW mainframe incarnation of Total, believed to be the first truly multi-tasking, multi-threading DBMS, has been launched by Cincom systems, together with an online query

system for end-users. The company also confirmed that Total would be available for IBM's Series 1 by the end of the year (CW, January 19).

The new Total release runs under IBM's DOS/VS, OS/VS1, OS/VS2, and MVS. Task, the interactive query facility, is an add-on to Cincom's TP monitor Environ/1, but will also be available under other TP monitors via the inclusion of a cut-down version of Environ/1.

COMPUTER WEEKLY
JUNE 13, 1968

THE first general production of British texts with the aid of a computer was to be undertaken by the RMIT. A merchant bank, Singer and Friedlander, placed the first order for an online system with Burroughs. An agreement was signed between RMIT and a Swiss electrical firm to market Argus computers in Switzerland. Hungary's first domestically designed computer, the 6540, entered the production stage. Train movements along the 47 miles of railway track around Leeds City station were being monitored by an EMI 503 "Elemental Control Programme" (ECP) based at "school" to learn about computers, on a two-day appreciation course arranged by NCC.

Announcing: Gemini Recruitment

From now on there's a better way to find the staff you need: Gemini Recruitment.

You already know the Gemini name as the largest software group in Europe. Now it's the name to come to for your permanent staff.

Unlike ordinary recruitment agencies we really understand this business.

Because we're already in the commercial data processing industry we know the problems you face in your day-to-day operation. We know exactly the skills you require to match specific tasks.

In short: we have the ability to obtain properly qualified staff and short-list them for you.

For more information about Gemini Recruitment contact: Ian Bacon — right now!

To see us in action — see page 54.

DOWNTIME

by Chad

Cycling the results

DO you have a pair of giant milk bottles beside your desk? The gentlemen in my picture are not measuring the output of cows, but keeping track of the placings in the round-Britain cycling Milk Race, using a Texas Instruments programmable calculator.

Computerised time-keeping of races is all the rage nowadays. The Manx government's Univac 90/30 is being used at the Isle of Man TT races this year. As an example of hitching up a carthorse to Concordia this could hardly be bettered — the figures are read

off a VDU and painted on to a scoreboard by hand!

Computers were introduced into the Head of the River Boat Race on the Thames several years ago, replacing a manual timing system of two-inspiring complexity. I was once (not that long ago) drafted into the team of schoolboys carrying out this job, sitting at a long line of tables in an hotel in Putney, filling out cards and passing them on to the next boy, without the slightest idea of how the whole amazing scheme worked. It did, though.

Golden Fleece award

THE Americans have a way of making their government colourful. Senator William Proxmire, 'saviour' of the Washington bureaucracy and critic of dubious computer projects, has taken to presenting a "Golden Fleece Award" to the government project involving the most ridiculous waste of taxpayers' money each month. Among the winners have been a study on why people fall in love, an

experiment on how long it takes to cook breakfast, and a study of relationships in a Peruvian brothel.

Many of the recipients of the award are scientists, who, naturally enough, fight back. One winner, an astronomer who is using NASA's radio-telescopes to listen for signals from extraterrestrial life, says of the Senator, "He deserves an honorary membership in the Flat Earth Society."

THE standardisation situation as it affects the European computing scene was the subject of a recent seminar in Paris when the transition from today's

more chaotic position to a more harmonious future was examined. With the emphasis on evolution rather than revolution, our SPECIAL CORRES-

PONDENT, nevertheless, set out here to show why a little revolution may be necessary in the important field of standards.

Where next with standards?

STANDARDISATION is seen by many responsible for computing policies as the key to future systems development. The need for standards for effective interchange of system elements, their interworking and quality assurance, was highlighted in an NCC report early in 1978 which generated considerable interest. It discussed the vital importance of standards especially in some rather mundane areas, such as character codes and sets, and data element representation where common implementation levels are vital.

Standards are important for another reason. If the number of computing systems increases as forecast, especially the number of microcomputers, then systems development on a one-off basis using today's methods has already led to cynical forecasts that almost every intelligent resident of the UK, able to program, will be programming by the year 2000! The implication is that system transfer, and interworking must be made possible to avoid such a situation, and its obvious economic implications!

At the end of April a seminar was held in Paris to explore the situation, particularly within the European context. It was jointly organised by France's BNL Bureau d'Orientation de la Normalisation en Informatique (Office of the Directorate of Standardisation in Informatics) together with West Germany's GMD and the UK's NCC and sponsored by a number of bodies, including France's IRIA and the CEC (EEC) Directorate General III. Its objective was to examine the transition from the present somewhat chaotic position to a (hopefully) harmonised future. The accent was very much on evolution rather than revolution, though the author's opinion is that a little of the latter may be needed if headway is to be made.

Standardisation, and its effective application, is seen by many authorities as the key both to development of the next round of computer applications, particularly those where interworking networking forms the basis of a multi-user system, which in many cases will include system components obtained from dif-

fering sources. The process of standardisation includes identifying the need for a standard, developing and specifying an appropriate standard, and its promotion, implementation and application. The last-mentioned stage should involve quality assurance, a much neglected area within computing.

In reviewing the present scene at the beginning of the seminar, NCC's Ray O'Connor examined the area of implementation of existing standards, and concluded that quality control is badly needed. An NCC audit of the implementations of standards for information codes showed that in the case of CCITT International Alphabet No 2, 47 out of 59 characters were correctly implemented by all implementations, while in the case of the ISO 7 standard, the score was 54 out of 128 characters. EBCDIC scored 49 out of 256. There is a clear need for audit aids which automatically aid implementation and check their alignment with the specification.

Pioneer examples are the US Navy's Cabol and

Inter-standard conversion aids and programs are roughly proportional to the square of the number of differing systems, demonstrating the build-up of chaos likely to result from non-aligned systems which will be inevitably passed on to the consumer at higher cost. This is an area where prospective standardisation is most urgently required ahead of widespread implementation of differing subsystems.

The machinery for the development and endorsement of standards was reviewed by Hugh Ross, chairman of the DP Committee of the British Standards Institution. He contrasted the performance of a "closed" standards-making body, consisting of bodies with a similar viewpoint, CCITT, with that of ISO. Of some 350 current CCITT standards some 20% are updated each year and it has some 80-plus projects in hand. In contrast, ISO's corresponding committee, which necessarily must involve a wider range of participants with differing and sometimes conflicting interests, has only published some 11

standards in the same area, although it has circulated some 1,600 documents to date! Other resources devoted were identified by the same speaker and included money/munipower for the development of standards, and an information service so that users can locate standards where they need them, and relevant information analysis and recommendations, as a back-up support service, where appropriate.

The rapidly increasing importance of standardisation for open system working was highlighted by Hubert Zimmermann of IRIA, the chairman of the Architecture Working Group of ISO's Committee in this area. SC18 of ISO7. He illustrated the vital role of such standards in unrestricted interconnection — the key to general information networking and thus many fu-

The process of standardisation includes identifying the need for a standard, developing and specifying an appropriate standard, and its promotion, implementation and application.

Fortran aids distributed by the BCS in the UK. The speaker went on to illustrate the urgency of the need by highlighting the likely explosion of the number of computers at work, especially as the number of microcomputers rapidly increases. The same point was raised in a lecture on compatibility by GMD's Dr Eckhart Randold.

The value of standardisation was clearly demonstrated by Don Trafford of the UK's Simplification of International Trade Procedures Organisation (SITPRO). The benefits of standardisation in that area are hard to quantify, but the benefit accruing from easier intercommunication between exporters/importers, carriers, agents, government bodies, such as Customs and port-authorities will be very considerable. Without such standards the need for

standards in the same area, although it has circulated some 1,600 documents to date! Other resources devoted were identified by the same speaker and included money/munipower for the development of standards, and an information service so that users can locate standards where they need them, and relevant information analysis and recommendations, as a back-up support service, where appropriate.

NEWS IN BRIEF

Poly centre to cost £185,000

THE Department of Education and Science has approved a £185,000 scheme to build a new computer centre at the Lancaster Polytechnic, Coven-

LANSAC choice

To help in its statistical and analytical work on behalf of 521 local authorities in the UK, the Local Authorities Management Services and Computer Committee has installed an ICL 1903-43 system at its Central London offices. Previously, LANSAC used local authority computers for this work.

JP's rotas

To ease the time-consuming work of preparing justices' rotas, Solicitor Computer Services is offering Magist, a computer service run from its bureau at Millers Keynes. Up to 15 types of courts can be dealt with, and information on courts and magistrates is submitted on a standard form to Solicitor. A complete annual rota is available within 14 days.

Bakery network

AN ORDER worth £175,000 has been placed by Allied Bakeries with Rascal-Milgo. This is for 98 Multi-Mode and MPS 48 modems and T-bar switching equipment, for use in Allied's 48-site management network based on Honeywell 90 mainframes and Level 5 minicomputers.

Factor data

DATA can now be sent to Singapore at 2,400 bps. And the same as the previous slower services, International Data 200 and 800. The new service is International Data 2400, and its introduction to Singapore follows successful operation to Bahrain since April.

Automatic answer

A NEW automatic answer facility, the 301-AA, announced by Borar Electronics of Wokingham for their 300 bps modem, enables an untended computer to respond automatically to incoming calls. Both line ICI and chairman of BSI Committee DPS/13, who suggested

Profile of a typical computer store customer—US style

THE typical computer store customer in the US is an engineer, aged 28, earning \$21,000, who belongs to a company of fewer than 20 employees and has had over four years of college education. And self-education or game playing are the most likely applications of the personal computer.

That is the finding of a survey conducted in computer store customers, by Imago Resource of Westlake Village, California.

According to the survey, 27% of customers were engineers, including 48% in 14% of the total were outnumbers by students, who were 18% of customers. Doctors and accountants both took up 2%.

Although the personal computer market is often seen as a young person's hobby, 48% of the customers were over 30, with 16% over 40. Self-education was given as a reason for buying equipment by 61% of customers, exactly the same figure as for those who wanted to use it for games.

Personal computing comes of age at Anaheim

THE personal computing market seems to have come of age in only 12 months. It was first featured at the NCC last year in Dallas, where a handful of hobbyists gained enormous attention for ingenious but amateurish exhibits; and by 1978, at Anaheim, the centre of the stage was taken by small companies offering business applications on microcomputers, and companies offering low-cost peripherals.

Typical of the products featured was the new R2E Micral V microcomputer in a suitcase, first shown at Slob in Paris last September. Complete with strip display, keyboard, printer and two minifloppy drives, all driven by a Z80, Micral V attracted enormous attention at the show, where the French company's US subsidiary offered it at \$8,250 in quantities of 50.

"We have just started operations out of our subsidiary in Minneapolis," Thi Truong, R2E founder and president, told Computer Weekly. "We are also introducing the Micral CM multi-megabyte microcomputer system, consisting of a data file management processor capable of supporting up to four independent microcomputer stations, each with its own local memory, input-output bus and serial input-output channel."

"The stations can support a local or remote terminal, which can be anything from a CRT display to a Micral C or Micral V system."

"We are building the Micral CM in the US for the local market," he added, saying that the system can support up to 80 Megabytes of mass storage and is programmable in ANSI Fortran IV, using the Fort/80 compiler on licence from Unified Technologies of Toronto. It is also programmed in the standard Micral BAL language, and CIS Cobol from Micro Focus of the UK will be available shortly.

Typical of the applications now being pursued by the so-called hobby market is medical data management for doctors. An attractive product for this market was exhibited by PAM, Professional Accounting Machines, of Santa Ana, California.

Zilog claims 'best of 370 and PDP-11 families' for Z-8000 16-bit micro

THE best attributes of the IBM 370 mini Digital Equipment PDP-11 computer families, without their worst attributes. This is what Zilog is claiming for its Z-8000 16-bit microprocessor, scheduled to be introduced towards the end of the year.

Some of the aims of the California-based micro-maker were outlined by Northern European marketing manager, Phil Pitman, when he talked about the details of the device at last week's meeting of the BCS microprocessor specialist group.

The design of the Z-8000 had been heavily influenced by the successful 370 and PDP computer families, as well as by Zilog's own Z-80 eight-bit device. The company's design team is trying to incorporate the advantages and eradicate the

Gemini moves into the recruitment field

MOVING into the people market, Gemini Computer Systems, the UK subsidiary of the CAP Gemini/Suget group, has set up a recruitment and staff selection operation. Initially based on Gemini's Manchester office, it is planned to extend the service later to cover London, and

Bacon, formerly with Combyte Services in Manchester, has joined the company to manage the new section.

Per Clarke, manager of Gemini's northern region, said Gemini had decided to venture

into the personnel field because many clients had asked for recruitment advice and assistance. The new service is independent of Gemini's software activities but will be complementary to it.

66 QUITE SIMPLY PIX GIVES YOU AN SDLC NETWORK

...QUITE SIMPLY...

IBM 360/370 users. Establish SDLC network easily quickly without the SNA front-end hardware or software are required by IBM. The sample program is the only answer to the problem of SDLC network. For details call 020 477 1715 or send advertisement, name and company to: Data Communications Division, IBM Technology, 50, Whitehall, London SW1A 2BQ.

IBM Technology

GILB'S MYTHODOLOGY

Verification dead—almost

I KNOW some of you will find this incredible, but there are still computer installations which use repetitive keying of input, and a second look at the source document, as a way of checking the validity of input data capture.

This technique, which I will call "verification" here, might even be unknown to the many readers who have been born directly into an online interactive environment. But such techniques continue to flourish.

Not too many years ago I could find a typical commercial DP installation where at least 30% of the keying devices were specialist verifiers. These days the amount of work still being verified. These days the amount of verification being done is hidden because of the multipurpose nature of the encoding machines.

But I regularly come across recently planned commercial and even technical engineering systems where repetitive verification is being used as a means of checking the quality of the original keying. The continued use of repetitive verification in new designs is, in my view, a sign of lack of imagination or of training of the designer.

One of the points against verification is its high cost. It requires an extra person-process, not to mention

machine, and people are becoming expensive. In some countries, this might create employment, and be desirable, but in others it simply results in increased import of cheap foreign labour, or the export of the keypunching jobs.

It is my experience that we are not unwilling to improve this process, but I have met system designers who claim that there is no better way of doing it. This has always turned out to be untrue, when they have had the opportunity to evaluate techniques of which they were not aware.

There is no one superior technique to replace verification. That is precisely the advantage of verification. It is highly generalised. One need not know much about the application, but merely repeat the keypunching instructions. The only justification I have found is where an immediate thorough check of keying is required for an application which is entirely new and which is not worth any long term investment in analysis and design of other checking procedures.

Here is my checklist of the techniques which in one combination or another, can replace repetitive verification.

1 Get the source to provide machine readable input. For example the bank could

supply a tape of transactions instead of a list.

2 Let the data source decide the amount. Years ago in Datamation an American company reported letting their suppliers fill out the amount the company owed, on a blank signed cheque. The bank then got the keypunching job, and the suppliers got the "correct" amount. There were maximum-amount, and responsible-supplier controls, of course, and the system worked out very well.

3 Automatically self-adjusting reasonableness checks. Check the quantity in relation to a programed note in the product record of the maximum amount validly ordered. Or the largest amount posted to an account. This may require extra fields in database records, but existing fields, such as year-to-date or last-month quantities may give interesting reasonableness tests.

4 Use a default quantity. In one application we found that 90% of all orders were for quantity one.

5 Logical deduction of the field. In one charter aircraft application there were eight six-digit dates on a form. All were currently being keyed, written and verified. Most dates were

the same, or related to travel distance, start time, air speed and crew resting rules. Better to let the computer work out most of them, and let humans intervene for exceptional circumstances.

6 Don't verify at all, take a chance. What is the maximum error? What is the cost of the verification? The answers may lead you to drop verification.

7 Use the side-by-side repetition method, for example 123 123. This does not cost as much as verification. It can be done by exception (for example, for the three per cent of orders with two digits or larger order quantities), and the program can read both attempts, check that a second attempt has been made, prompt the operator when it has not, give alternatives when there is a difference, and even select a probable alternative.

8 Distinct repetition method. This is the same as the ordinary repetition on the same input record, but some of the problems of input parroting are solved.

9 Check sums. The old tried accounting method. Here for completeness sake.

10 Use grouping concepts to simplify numbers and to introduce checking redundancy at no extra cost. For example, PK meaning whatever quantity is in package of that item identification. DY meaning however many hours of work in a normal working day of that date for that class of worker.

11 Use "Check words" which are quantities. For example, item and price, or person and birthdate. This concept acts as a powerful double check on not just the quantifier, but also the identifier.

12 Let the receiver verify. In one case where 100,000 insurance client names and addresses were converted to gibberish, we let the post office try to deliver bills, rather than checking a million policy records ourselves.

13 Pattern checking. Quantity patterns which are normal are recorded (automatically) for each item, account, etc. The input is checked against these.

GILB'S HYPOTHESIS: Repetitive verification is obsolete, but we don't all know it.

Space package from Spa

A GENERAL accounting package, called Space, is available from IBM System 32, System 34 and System 3 computers from Spa Software Services. Written in RPG 2, the package handles order entry, invoicing, sales ledger, sales analysis, stock control, sales forecasting, and commission reporting. Spa Software Services is based at Thom Way, Long Thorns, Long Thorns, Rugby. Tel: 0628-81 2237.

NEW structural mechanics programs are included in the revised catalogue of finite element computer programs produced by Linköping Institute of Technology, Sweden. The catalogue describes program characteristics and source for about 40 programs.

Updated at the same time is the similar catalogue of pre and postprocessor programs.

FOLLOWING the takeover of Atkins Computing Services by On-line Systems Inc (CW, August 4, 1977), the company has changed its name to Atkins On-line Ltd and plans a major expansion of computing resources. In addition to a satellite link to On-line's Pittsburgh complex, two DECsystem 10s have been ordered for the Ipswich bureau, complementing the existing Xerox Sigma 8 service.

The new equipment will be used in part to make available the successful US software packages, Oscar for project management, and Oliver, a database management system (CW, January 29, 1976).

SOFTWARE FILE -2

EDOS/VS version launched

A VS version of the EDOS operating system is to be released shortly in the UK by The Computer Software Company. Based on IBM's DOS/VS, the system will be available to both System/360 and System/370 users.

EDOS/VS follows the pattern established by EDOS in providing both performance improvements and superior operational facilities over the standard IBM software. Incorporating all the enhancements of EDOS, it is fully compatible with existing DOS/VS and EDOS programs and JCL.

One factor contributing to efficient memory management in EDOS/VS is that variable partitions are supported, whose size is established at each job step. Up to 12 partitions can be run, with automatic partition balancing.

Another throughput feature is real storage system support. Typical of the architectural tailoring in EDOS/VS, this

enhancement is based on the observation that, even under the VIRTUAL-REAL option, DOS/VS continues to invoke channel program translation as if it were paging.

According to the company, by-passing these routines can save up to 20% of the supervisor overhead when all partitions are being executed in real mode.

Another major bottleneck, multiple outstanding reads to the system console, is eliminated with a facility permitting asynchronous operator communication. Support is also provided for use of a 3270 as the system console.

Other features of the software include extended procedure library support and automatic IPL procedures, allowing standard system IPL statements to be catalogued.

On a 360, one of the major attractions of the system is support for program products and devices otherwise only available on a

370. EDOS/VS-360 differs from EDOS/VS-370 only in the removal of paging code.

Installations with both 360 and 370 equipment can thus use EDOS/VS as a single compatible operating system, enabling jobs to be run on either machine. The system in addition supports the company's Gemini software, which enables CPUs to be coupled.

EDOS/VS also supports the full range of existing EDOS options which include disc space management and tape management systems; the PDMS program development and maintenance system; Extended RJE; the Datacom/DB database management system; and a data entry control system, DECS.

Previously offering support based on the US, The Computer Software Co has now established a permanent address in the UK. The company is based at St Alphage House, 2 Fore Street, London EC2. Tel: 638-2144.

Enhancements to Total

PORTABILITY, performance, and support for online working are the main areas enhanced by Cincom in the latest IBM 370 release of Total, numbered 8.0.

Released at the same time is an interactive query facility, Task, the first of a projected range of end-user oriented software.

Most of the enhancements in the new Total version relate to the control of tasks and the en-

vironment, and file control, with only a slight effect on data manipulation.

The result of a major internal re-design, the chief benefits for users are a substantial improvement in throughput and response time, and a greatly superior recovery mechanism.

Fully re-entrant, Total 8.0 supports multi-task, multi-threading operation within the

DBMS itself, permitting maximum I/O overlap, blocked logging, and a significant reduction in CPU cycles. Other factors leading to improved performance are execution-time element binding, and code-directed and data-directed access.

Previously restricted to BDM, the new system for the first time offers the option of VSAM support. Including support for the key sequential version, the option facilitates the implementation of inverted file structures.

Other features of the new release include task-level recovery and a high degree of portability across operating systems; system components are now identical for DOS and OS.

Available to the Harris microcomputer implementation, Task provides three basic functions: query, procedure cataloguing, and directory maintenance. An interpretive processor, it is operated from a 3270 or 3270-compatible terminal.

On signing on and supplying a password, the user is presented with a menu of the database elements available to him. Those selected as germane to the query will appear on the final display, together with any derived fields such as averages or totals.

Task then asks the user to specify the selection criteria, and any derived fields, using the system language. When executed, the routines present results on the screen one page at

a time, with the option to continue or abandon the retrieval at the end of each display.

The directory maintenance function allows the system administrator to specify which database items can be accessed by each user. Data items on each menu transcend file boundaries and can be named differently for each user. A central directory relates these aliases to the Total DBGEN name for the element.

The Inquire database management system has been made available at a UK bureau.

The IBM-based UK arm of Control Data Corporation Data Services Division has installed the DBMS software on its 360/85 running under MVT. Now that field trials have been successfully completed the bureau expects several clients will soon be using Inquire.

Inquire originates from Information Systems of Virginia, but is marketed in the UK by London consultancy Software Implementation. Despite having had the agency for two years, this is the first site supplied by Software Implementation.

The system has several unusual features, including an English-like query language and facilities for text processing.

IBM applications system for 5110 machines

FIELD-DEVELOPED applications-oriented software is to be made available by IBM for the 5110 desk-top computer. The package, Business Report/ Application Development System (Brads), is described as a database entry and maintenance system designed to help in the development of common commercial applications.

Brads provides facilities both for reporting and data manipulation. Driven interactively, the system guides the user through complete command entry by prompting for the parameter specifications required by each command.

The built-in report program caters both for automatic and user-specified formatting, reflecting a general concern in the package to meet the needs both of the casual and the more experienced user.

Features of the report generator include the ability to handle multiple input and output files, and to select on multiple user-defined criteria, such as intermediate results. Files can be accessed directly, via record number or key, as well as sequentially or indexed-sequentially.

In addition to the report program and file access methods, the software offers general purpose functions for access to the database; an inquiry facility; and facilities for data entry and update.

Written in Basic, Brads is scheduled for release at the end of September. It will rent for £34 per month.

Offered in the US with a wide range of standard business packages, the 5110 was released in the UK without the benefit of any IBM applications software (CW, January 26). However, a number of software houses have found the system very attractive and those already offering packages include CAP, CRI-Abacus, and Eurologie Software.

Inquire can support hierarchical, network, and relational databases. A special feature allows two files to be temporarily associated and treated as one, by identifying to Inquire a field common to both—a useful restructuring facility.

Among 85 Inquire users worldwide are two UK users supplied before the agency agreement with Software Implementation.

SOFTWARE FILE-1

Big growth in VM users is predicted

A LEADING specialist in IBM's VM/370 operating system has predicted a dramatic growth in the number of active users over the next two years.

Jim Byrne, chairman of the VM/370 user group in the UK and Elre till 1977, said the number of VM users in the UK was expected to grow from 60 to 300 in the next two years.

In the US, VM users would grow from 400 to 2,000 by the end of this year, he said, representing at least 20% of all US installations.

"A major reason for this," Byrne explained, "is the availability of the new level of IBM computers with much improved price/performance ratios, and the emphasis that IBM itself is placing on VM."

Byrne, now technical support manager, VM products, for Computer Associates, was speaking at the company's formal launch of the products in the UK.

Chief among CA's offerings for VM users is DOS/VS, which provides conversational, time sharing facilities for OS/VS users. Based on extensions to CMS, the software allows the DOS and CMS environments to exist concurrently in the same machine.

DOS/VS makes available interactive facilities to develop, execute, and debug DOS/VS programs and fully supports all DOS/VS utilities, access methods, and compilers. One important application cited by the company is as an aid in the transition from DOS to VSI.

Available for use with the

system are tools for interactive symbolic debugging of Cobol, Fortran, and Assembler, and for test data generation. These packages, Symbug and Symdata, can also be run under CMS.

Other CA software for VM/GMS includes CA-ISAM, a simulation of OS ISAM under CMS, and CA-VSORT, an implementation of OS Sort for

CMS. CA, best known for CA-Sys and CA-Earl, originally acquired its VM products through the takeover of the software products division of Standard Data Corp (CW, July 8, 1976).

The occasion was also the anniversary of Computer Associates' UK arm, formed at the takeover of Carus (CW, March 10, 1977).

Seicon system for financial planning

THE latest bureau to introduce an interactive financial planning system for end-users is Seicon Computer Services. The company has installed Finar, a financial analysis and reporting system developed by Arlato Business Systems (CW, August 11, 1977).

Originally implemented on OEC System 10 and POP-11 equipment, Finar has been converted by Seicon for use on the Univac 1100 series. This version will be sold and supported by Seicon for in-house machines in addition to being available on the Milton Keynes bureau service.

Claimed to be accessible to any user who can operate a desk calculator, Finar covers requirements such as the evaluation of alternative investment plans, budget-variance analysis, sensitivity analysis, and profit and loss statements.

Seicon says that it plans to

Interface Finar with a number of existing packages to create an integrated management tool. A software identified package for forecasting and project control and evaluation.

Finar has already been installed by two DEC bureau services, Computer Services, of London and Octacell, of Leeds.

Coral compiler

A RESIDENT Coral 86 compiler for the OEC PDP-11 has been produced by Systems Designers. Based on the company's universal front-end, the initial release is intended for 11/24 and 11/45 equipment under RSX-11M.

Systems Designers claim the compiler and complete capability, based on the OEC standard, as the major advantages over the compilers available. The software is priced at £4,500.

PROGRAMMER NOTES

De Bono's views on Lateral Thinking

There is an enormous body of knowledge within the DP world. And, according to Edward de Bono, it represents a far greater deficiency than within any other occupation.

De Bono, the father of Lateral Thinking, was expounding his views at a three-day seminar organised by Intofech. Object of the sessions was to stimulate DP

people into extending their normal techniques of problem solving.

According to de Bono, part of the difficulty for DP people is that there is usually at least one obvious solution to a problem—probably of a conventional processing type.

Lateral Thinking should be used as a stepping stone to new ideas, to kick away from well-worn channels of thought. A means of introducing external influences, it can sometimes bring out important insights, leading to new techniques.

De Bono does not advocate expanding too much time and effort on Lateral Thinking approaches. He recommends its regular application, but in moderate periods of perhaps 10 minutes. Thereafter if LT has not suggested any new possibilities, conventional methods should be adopted.

De Bono's views on Lateral Thinking are expounded in his book, *Lateral Thinking*, published by Intofech. The book is available for £4.50.

De Bono's views on Lateral Thinking are expounded in his book, *Lateral Thinking*, published by Intofech. The book is available for £4.50.

PEOPLE

Sir Rex appointed to the IBM board

Sir Rex Richards

Irish BETA officials

OFFICIALS of the Irish Business Equipment Trade Association, IBETA, have been elected for 1978-79. They are:

President, John Campbell, Rank Xerox (I); vice-president, Aidan McKenna, Memory Business Machines; hon secretary, Ted Cantwell, Regent Typewriter (I); hon treasurer, Laila Johnston, Dublin Office Equipment Co; PRO, Brian Grent, IBM Ireland; administrator, Jack Simpson.

Derek Blackiston, previously central accounts senior territory manager with Reddon Computers, has joined Infocore as a senior salesman.

Dave Bennett (separate right) explains the workings of a CMC Key Processing System to members of CMC's, the CMC Users' Association, at the Open Day held recently at CMC's headquarters in Hamel Hamstead, Herts. (Left to right) Alan Fitch, Haven Computer Services, Niggard; Ray McKinnon, Johnsen Mithay; Ann Maek and Guncac; Camas secretary Bob Foster; and Mary Skinnell and Selly Stevens, Lagel and General.

Motorbikes for charity

A 2,000-MILE Vintage Motorcycle Tour of Great Britain organised by the Electrical and Electronics Industries Benevolent Association will be successfully completed on June 4.

The five machines set out from Stroud in Gloucestershire on May 27, and their route took them to John o'Granta and Land's End before finishing in Denning in Surrey.

The event was organised to raise funds for the EEISA through sponsorship.

Janet Lennox joins F International as a regional manager. She was previously with Leyland International where her responsibilities included management of systems programming and systems engineering support for all Leyland's European installations, evaluation and acquisition of all equipment, setting of standards for all aspects of a computer installation, defining job responsibilities and selection of senior staff, together with a functional responsibility for overseas companies.

Charles Nash, formerly Surroughs' promotion manager for the North of England and Scotland, has been appointed manager of the company's Preston branch.

Michael Toomey, formerly operations manager with UCC Datacam, has joined Memory Ireland as manager of the computer bureau payroll service division.

Len Berons, a director of wire-makers Johnson and Nephew (Non-Ferrous) of Sheffield, has been appointed to the board of GMS Computing.

Keth Bishop has become a senior systems analyst with Logobex in Leeds. Previously he held a similar position with Adior.

Peter Evans joins Raytheon Corcor Data Systems as a general manager, from Burroughs, where he was manager of the applications program product centres in London and Paris.

John Clark has become president of ICL's data products group in the US, of which he was formerly executive vice-president, and has been elected a vice-president of the parent corporation. He has been operating responsibility for the group from Richard Lustig, executive vice-president of ICL, whose responsibilities have been extended to include the air and equipment management and the data services groups, as well as the data products and financial services groups.

Among these reporting to Clark is the president of ICL International, Joseph Foster.

Derek Hoffmann, general manager of Kins Applied Technology, has been appointed to the board. Brian Balle has been promoted from marketing executive to marketing manager, and Gerry Hughes, lately of Foxboro-Yoxall, has joined Kins as a marketing executive on computer systems.

Paul Martin joins Logobex as a senior sales executive for the city and North London. Previously he was with Unilever in a similar capacity.

The South of the Thames heat of the Computators took place in brilliant sunshine last Sunday at Craydon Sports Arena. The event had the highest attendance so far, with 28 men's and 12 ladies' teams participating. Winners of the men's events were Hounslow Borough Council with 126 1/2 points, with Commercial Union and the Rank Organisation second and third respectively. It was a notable achievement for Hounslow, since their team captain, Peter Griffin, had to retire early in the competition with an injured knee.

The Rank Organisation won the ladies' event with 67 points, after a close contest with Parkin Elm, who finished one point behind them. Hounslow Borough Council were again represented by the ladies' division winner, Janet Davison. For the men's computer services, it was a day for double celebrations. The winning ladies' team is seen above, left to right: Dinne Stephens, Janica Cook, Jackie Low, Diane Jonas. The winning men from Hounslow were, left to right: Gary Strannon, Dave Royston, Brian Hughes, Steve Stratton, Gary Reed.

Penta agent moves

UK AGENT for the Penta system, Miles 33, has moved to new premises in Bracknell. The address is Cog House, The Ring, Bracknell, Berks RG12 1AX. Tel: 0344 56033. Sales manager of Miles 33 & The 1111, who was previously sales manager of Comptel.

First prize in the Computer Weekly/Dataskill essay competition, Computer-style 2000, was shared between Bryn Jones of Haverfordwest, whose essay was published last week, and David Butler

(pictured right), of Butler, Cox and Partners, of London EC1. Butler's essay, entitled "Britain in Turmoil 1975-2000", appears below.

Third prize in the competition was won by John

Garratt of CSI, London; and Garratt's essay, and those of the special award winners — John Finlay of Solihull, Paul Holden of Dublin, and A. Thornton of Darby — will be published soon.

By DAVID BUTLER

Britain in turmoil—with a ban on political parties and the Press censored

(This article is based upon excerpts from A Social History of Britain in the Twentieth Century published by the Oxford University Press in the year 2000. Copyright OUP, MM).

LOOKING back on the final quarter of the twentieth century, one is struck by two apparently contradictory phenomena. The first is the amazing rate of change — technical, social and economic which prevailed.

The second is the almost total lack of awareness of the significance of that change among the acknowledged leaders of society, including businessmen, politicians, economists and sociologists. They simply pretended that the computer revolution was a 'happening' and that the Information Society (or Infocore for short) would go away if it were ignored.

On reflection, however, these two trends were not as contradictory as they seem. For, if the political leaders of the 70s and 80s had understood Infocore, they would probably have struggled to keep it.

Few people paid much attention to even the most fundamental changes, such as patterns of employment. In 1952, for example, 43 per cent of the British workforce worked in manufacturing and only 38 per cent in services. Twenty years later manufacturing accounted for only 27 per cent while services had grown to 49 per cent. As manufacturing declined, office and administrative work expanded to absorb the surplus workers.

But by the late seventies, the advent of word processing, microprocessors, effective telecommunications systems and cheap terminals made it glaringly obvious that the office workforce would also decline. Where would the surplus workers go then, squeezed out of factories and offices by the progress of automation? A few lonely voices were raised in warning.

A consultancy firm in London devised the "Green Circle Plan", aimed at helping redundant workers back to the land as part-time telecommuters and part-time smallholders. The plan was widely derided. The opportunity to embrace Infocore in the UK without bloodshed and violent revolution was lost in the face of the impenetrable ignorance of the political leaders of the day.

The trend for the workers themselves to take the lead in closing down obsolete plants thus became known as "Swan Hunterism".

The most obvious sign of industrial change in Britain was the rapid and drastic decline of manufacturing. Solidly resistant to change, wracked by internal dissension and apparently indifferent to the threat of its competitors, the UK manufacturing sector slid painfully downhill.

In the 1980s and 1970s manifestations of this decline included the nationalisation of virtually every strategic manufacturing industry — aircraft, motor cars, ships and so on. Unprofitable companies were subsidised (consuming virtually all the revenues from a few highly profitable industries) in a vain attempt to save employment.

unemployment had reached three million. A confidential Treasury forecast of five million unemployed by 1985 was leaked to the Press and the ugly and violent Work Riots broke out in 1981. In the course of three months over 1,000 lives were lost, including rioters, police and troops.

After the signing of the famous Birmingham Declaration by the representatives of the unemployed (now representing an important constituency of nearly 10 million people including families and dependents), the police, the armed forces and the trade unions, the inevitable consequences followed. Under the Emergency Powers Act (1982) a Government of National Reconstruction was appointed for an indefinite period. Political parties were banned and strict Press and media censorship imposed. With few exceptions the people of Britain heaved a sigh of relief and began work on the construction of Infocore, a task for which Britain was in fact uniquely well qualified.

It had been clear for some years that the British people had a clearer perception of their future than their leaders. As long ago as 1978, the Government of the day had bought an airliner from the Polish Government, to try to preserve jobs in an obsolete shipyard. The workers themselves declined this subsidised make-work scheme, as if sensing its inherent economic folly. The trend for the workers themselves to take the lead in closing down obsolete plants thus became known as "Swan Hunterism".

But the decline in factory headcounts was a global trend. In countries where conventional engineering had persisted longer such as the US, Japan, Canada, France and Germany the decline of factory employment left behind huge pools of labour in the 1980s. By 1990, Britain had a big advantage because it had begun its shake-out more than a decade earlier. Factory automation exploded in this newly-rich countries of China, Brazil, Saudi Arabia, Iran and the United States of Africa, where the absence of a workforce dependent on conventional factory employment eased the introduction of totally automated factories.

Many of these factories are managed today by British engineers sent as consultants in Britain. The factories are sited close to their source of raw materials and to their markets, rather than to large pools of semi-skilled labour or management resources. Thus they save transport costs in an era of scarce mobile energy.

Meanwhile, in Britain, social attitudes had gone through 180 degrees. By 1985, it was clearly

understood that the inalienable upon a full-time job was characteristic of an unlightened, unconstructed personality. Those who retained the old work-dependent attitudes of the 50s and 60s were contemptuously termed "jobbers". They lacked the inventiveness of the majority to use their leisure creatively and to enjoy part-time employment. They received the some tolerant disapprobation as alcoholics, drug addicts or those fanatical devotees who were unable to adjust in the new order.

By 1985, it was clearly understood that the insistence of a full-time job was characteristic of an unlightened, unconstructed personality.

Gradually Infocore emerged, painstakingly built on the sacrifices of a generation trained for work that no longer existed. Many of today's largest industries did not exist a quarter-century ago. Global resource management was in its infancy: many British systems corporations looked after the conservation of 70 per cent of the world's consumable resources. They monitor pollution in 12 of the world's 15 largest industrial nations.

In 1975, public entertainment consisted of TV, two-dimensional films and performances by live "stars". Today's holographic and polyphonic fantasy factories, shipping their spectacular multi-media products to every corner of the world, were undreamt of. Britain supplies over 40 per cent of the fantasy output of the world.

While countries with a less developed regard for human life have specialised in manned space exploration, the UK has pioneered the development of telepresence lunar engineering. For most applications, the 1.2 second transmission interval between the tele-engineering centres on Earth and the surface of the moon is acceptable. Two-thirds of the Chinese and African colonial centres on the moon are British-built teleconstructs. The next step is the design of intelligent machines to exploit the mineral wealth of Mars.

Education programmes, pioneered in the 1960s by the Open University, are another British product which leads world markets, exploiting the fact that English is the world's most widely spoken language.

The remote development of software and the remote solution of management problems have exploded into huge mar-

kets, in the wake of the globalising programmer and consultant. Perhaps Britain's most distinctive contribution to the emerging global Infocore has been the National Association of Experts, whose members encompass every branch of human knowledge. All over the world people dial in to the NAE's global video network, using the knowledge index to find the leading expert on ancient Chinese music, plasma physics, genetic research — or whatever. The opinion of the human experts supplements the vast factual information in the NAE database.

The NAE was Britain's fifth largest earner of overseas currency in 1985. It consumes no raw materials and runs on

Britain's most precious resource — brainpower.

All of these developments took time and effort to launch. But it is worth recalling that the

The city centres, previously dominated by offices and banks, have been converted to urban funfairs.

seeds of Britain's current prosperity were sown as long ago as 1970, when the world's first home computing service was launched in our country under the title of "Videodata". The happy and prosperous people of

Britain in the year 2000 owe much to the great pioneers of that time.

The social impact of Infocore has been equally dramatic. At community work centres, workers log into a public terminal for their short daily shift, irrespective of who their employer may be. The old pattern of life where workers lived in suburbs and commuted to offices is fast disappearing. The majority of workers now live in the country, where the extended family (including aunts, uncles and grandparenas) has been reconstructed. Juvenile delinquency and adult crime have been vastly reduced by adequate family care.

The family aggraption, with every smallholder rewarded for reaching self-sufficiency targets, has made Britain only a small-scale importer of food. The derided Green Circle Plan of the 70s came to fruition after all.

The city centres, previously dominated by offices and banks, have been converted to urban funfairs. Now that Britain is prosperous and stable again, the ruling National Reconstruction Party has announced that the re-introduction of democracy is imminent. Political parties will again be permitted. Before a decade is out, elections may even be held. It is to be hoped that Britain's progress towards the target of a democratic Infocore will not be disrupted by small bands of agitators and malcontents, mostly backed and financed by anxious and less happy countries such as the People's Republic of America.

Buy a Versatec hard copy unit for £7,500 and get your line printer FREE!

Versatec hard copy systems

operate as:

plotters at one inch per second, line printers giving 525 to 1075 lines per minute. They will: interface with the HP 2648 Tektronix 4000 series and most raster video terminals, produce hard copy from between 1 and 8 video terminals, operate on-line with most popular computers.

With one printer/plotter a Versatec Hard Copy Unit does the work of three peripherals — hard copy device, system line printer and plotter.

For more facts and information complete and post the coupon today.

APL is the language of the future

PO £2m order for Marconi

THE Post Office has placed an order valued at about £2 million with Marconi Communications Systems of Chelmsford for the supply of 300 bps modems to be used in the Datal 200 service.

The U1108 modem is a single card which can be supplied either in a box with a power supply or rack mounted with a bulk power supply and up to six boards to a rack.

30 more terminals

THE Alliance Building Society's online branch investment and mortgage system is to be enhanced with the addition of 30 Transdata 313 printer terminals worth £25,000. They will be used at branch offices in conjunction with VDUs linked to a Burroughs B8700 at the society's headquarters in Hove, Sussex.

Explosive

A BURROUGHS B1700 system has been installed by Nobel's Explosives, a subsidiary of Imperial Chemical Industries. The £70,000 system will be located at Nobel's Ardeer head office, and is to handle local processing and standard hasp communication with an IBM 370 system.

Time sharing

ADDING to its IBM mainframe service, computer bureau Southwark Computer Services is offering an interactive time sharing service based on a Digital Equipment PDP-11/70 minicomputer operating under RSTS/E Level 6B. The service is aimed at software houses requiring program development facilities and at relatively inexperienced computer users.

Tally range

NEW UK distributor for the Tally T1812 aerial buffered printer, Computer Marketing, is now able to offer the full range of Tally line printers and terminals, largely on an ex-stock basis, with full contract maintenance.

Phillips installation

TO cope with the growing volume of invoices and other accounting routines, the R. H. Freight Group of Nottingham has installed a Phillips Data Systems P410 business system.

Free brochure

A FREE six-page brochure has been published, detailing the services offered by the Engineering Mechanics group of Atkins Research and Development of Epsom, Surrey.

SIGNIFICANT cost savings are expected to be made by BSC Stainless, part of the British Steel Corp, in the production of stainless steel at two of its plants which are now using a computer system developed jointly with Scicon Computer Services.

BSC Stainless has already invested over £90,000 in the project, known as Least Through

Cost Mix, and the system is based on Scicon's two Univac 1108 computers at its bureau installation in Milton Keynes.

LTCM is a simpler method of working out the most cost effective 'recipes' for varying grades of steel. BSC staff at the two plants, Panteg in South Wales, and the new £50 million facility at Tinsley Park, Shef-

field, access the system via on-site VDUs linked to Scicon by Post Office lines. It is simple to use, as all the operator has to do is input the relevant parameters such as current value of materials, associated processing costs, and any practical restrictions. The least expensive option can then be produced in minutes.

Previously a manual system was employed in which 'pencil and paper' work was sent to BSC's management services centre in Sheffield for processing on an Elliott 503 machine.

Development of the LTCM system took about a year, and the software is based on Scicon's mathematical programming system Sciconic, and is supported by a wide range of commercial software including MGG, Sciplo, and Special For

trans enhancements.

It is likely that after another year or so of using the system BSC Stainless and Scicon will market their expertise in this specialised application to other interested parties in the steel industry.

Three big orders for Datatext

ORDERS for three large shared-logic word processing systems have been placed with General Computer Systems of London. The orders are for the Datatext IV announced recently (CWI, May 28) which uses purpose-designed intelligent VDUs.

Two of the systems are going to Codrury Schweppes of Bourville, Birmingham, and will form a 23-station network, using five different locations in the building. There will be two CPUs and six printers, and if one processor is out of action the screens can be switched to the other. The order is worth £140,000. Text storage will be on two 28-Megabyte disc units.

Purchase orders will be typed on the word processor, with the information from them simultaneously recorded on magnetic tape for transfer to the firm's IBM 370 minicomputer. This is the accounting system will be updated without duplicate key-boarding by the data preparation department.

A 12-station Datatext IV has been ordered by ICI Agricultural Division at Billingham. This is costing £84,000 and will be operated by two separate departments.

An interactive transaction processing system called Trax, for Digital Equipment PDP-11 systems, has been introduced by DEC at prices ranging from about £87,000 for a 20-terminal PDP-11/74 based configuration. It includes a new intelligent terminal, the VT82, which provides form handling and error-detection capabilities plus a software system which places special emphasis on file handling, resiliency and data protection capabilities.

PDP-11/34 minis for Tote

AFTER a detailed study of how to computerise its on-course business, the Horserace Totaliser Board has decided to acquire six mobile systems, each based on two Digital Equipment PDP-11/34 minicomputers and supplied by Gamma Associates.

The six systems will be moved around the country along with 400 tickets issuing terminals manufactured by Control Systems of Uxbridge, which will also install and commission the systems, having been appointed as the prime contractor.

Apart from issuing tickets, the Tote systems will be used to calculate dividends and cash winning tickets and will be able to handle win, place, combination and multiple bets of any value.

Apart from Gamma Associates, some of the other sub-contractors include SEN

Meanwhile, the development of a domestic electronic mail network by the US Post Office has reached the stage where special transmitting and receiving equipment has been tested.

The equipment includes a very high speed facsimile type scanner for transmitting letters, and a high speed printer for the receiving end which reproduces each letter page on to A4 size paper. The pages are then automatically folded and put into envelopes by machinery developed by Pitney-Bowes.

The high speed printer was

developed for the US Post Office by Varsatec, the electrostatic printer/plotter manufacturer. It handles 11-inch wide paper, printing 2 1/4 inch wide A4 pages on their sides at a rate of 17 1/2 inches, or about 20 pages a second.

This print speed, equivalent to about 80,000 lines per minute, is far faster than any electrostatic printer that is now available commercially. But it was not difficult to achieve, according to Varsatec, because the speed of electrostatic printers is kept down in practice only by the inability of computers to feed them with information fast enough.

One of the biggest problems to be overcome before this public electronic mail system can go into live operation will be getting permission from the US government and approval from the general public for private mail to be opened and scanned in the Post Office at the transmitting end and printed out at the receiving end.

But with the vast distances between cities in the US, the speed offered by the electronic mail system could make it a very useful service for customers wanting fast delivery of letters that are not highly confidential.

Electronic mail will be one of the services offered by Satellite Business Systems, the firm in which IBM has a major shareholding, but the main difference between the SBS system and the US Post Office system is that SBS users will be mostly big companies transmitting electronic mail from their own terminal equipment.

PROM agency

THE PROM programmer and simulator produced by ITT Components Group is now available through Rapid Recall. It has the ability to 'blow' most of the popular programmable memories, and in addition eliminates the requirement for a teletypewriter or video display in target system development and debugging.

Initial running under DME, the 2960 will be used to implement the society's new management control system which trends each of the 600 outlets in the London area as a separate cost centre.

The system will also cover Co-op bakeries, farms and funeral service.

Co-op orders a 2960

IN the year since ICL announced the emulation facility on the 2960, orders for the machine have grown rapidly. Latest to London Co-operative Society, which is replacing its ICL 1904 with a one Megabyte 2960.

More staff taken on by Systime

AS part of its expansion plans, the Leeds-based minicomputer systems manufacturer, Systime, is currently taking on more R&D staff, including engineers and software development personnel.

They will work for two senior managers who have just been appointed by Systime to report to the firm's technical director, Ian Fallows. One is Barry Slinger, formerly plant engineering manager with Mullard at Hazelgrove, Cheshire, who has taken over as product development and engineering services manager at Systime.

The other new man is Ian McNeill, who has joined Systime as systems software development manager. In this post he will be responsible for the development of operating systems, networking systems, telecommunications and software for micro-based controllers. He was formerly a senior project manager in the computer special systems section of Digital Equipment at Reading.

SHOWN on its way to the Ninian offfield is the Howard Doris platform. One of the design contractors to Chevron Petroleum (UK), was a recently-acquired subsidiary of University Computing, Electronic Calculus Ltd. ECL conducted finite element analyses of the entire structure, and also used its space frame analysis program, Eclips, for discrete analysis and design checks of the steel deck. Chevron had access to UCC's twin Univac 1108 installed.

Logica takes look into the future

TWO new books have been published by the Simplification of International Trade Procedures Board; one illustrating the possible future trends for computer systems and the other setting out recommended standards of data formatting for those in the Import/export business.

The first book, "Future Trends in Computer and Communications Systems," was prepared by software consultancy Logica for SITPRO as part of a project to develop standards for data interchange, details of which are given in the second and bigger book, "Computers in International Trade and Transport - Data Standards."

In looking at possible future trends, the Logica study makes a number of predictions, which it backs up with graphs, tables and other illustrations, on what sort of changes one can expect to take place between now and 1990 - although it does venture as far as the year 2000 in the last chapter.

Among its basic conclusions, it states that "the prices of processors will decrease dramatically, particularly those of microprocessors," although it does balance this with the further statement that "trends in software are unlikely to lead to similar reductions in costs, but are expected to lead to improvements in the implementation and operation of computer systems."

Among other predictions are that there will be limited improvements in public telephone/telex networks for the period under study, but new data networks will offer greatly improved transmission facilities; end computer systems, particularly databases, will gradually become easier to use in terms of physical access and easy-to-use languages.

And in the long term (1990 onwards) computer systems may develop to the point where complex calculations will be carried out on hand-held or desk-top devices, mainframes being used primarily for database applications.

The second book, "Computers in International Trade and Transport - Data Standards," is, in fact, a manual for UK trade and transport organisations that provides them with a glossary which itemises the standard formats for documentation and recommends or lists coding systems that cover the requirements of importers/exporters, forwarding agents, carriers, port authorities, and HM Customs.

Further sections also deal with standards for the interchange of data between computers and other related equipment over telecommunication links, or by other media such as magnetic tape.

All the standards have been designed to be independent of

both the type of computer and system application, and the manual took 18 months to complete. It comes in two loose-leaf volumes and was compiled with the assistance of over 80 UK companies and organisations.

On show in Switzerland

THIS month sees the latest growing number of European microcomputer exhibitions and conferences, when IMMA, the International Microcomputer, Minicomputer and Mainframe Show, gets under way for the third time at the Palais des Expositions in Geneva, Switzerland.

Over 80 companies are taking space at the show, which runs from June 20 to 22, and the exhibition will be supported by three days of conferences, with three sessions running in parallel on each day.

Among the well-known names scheduled to appear are Ampex, Data General, DEC, Ferranti, Hewlett-Packard, Honeywell Bull, ITC, Comshare, Imal, Nalco, Semiconductors and Plessey. Other companies come from Switzerland, France and Italy.

Further information can be obtained from the organisers, Kiver Communications, at 185 Fowell Road, Surbiton, Surrey.

Rory Johnston reports on the International Word Processing Exhibition at Wembley

ELECTRONIC mail was the hottest topic at the International Word Processing Exhibition at Wembley last week. Several manufacturers showed their machines communicating with each other over Post Office lines.

These demonstrations made the point forcefully that the obstacles to full-scale paperless communication between firms are now largely administrative and political rather than technical.

As far as other technical developments go, it was clear from the word processors on show that their capabilities are rapidly converging; most can now do more or less the same things.

Forwards-and-backwards printing, justification, decompiling, and other features are becoming almost universal. It would appear the designers are working on the principle of "Great Minds Think Alike".

User interfaces and their ease of operation, however, are not nearly so consistent. Twenty-nine word processor suppliers displayed their wares at the show, along with several component distributors and makers of dictating equipment. BETA, the organisers, report that 6,239 visitors attended, a 40% increase over last year; yet the show did not seem particularly busy, perhaps because the number of suppliers in this market appears to be increasing faster than the number of customers.

Prominent among the machines seen communicating at the show were the Philips WP5001, Logica's new VTS/100 (CW, June 1), and the Ontel machine, being sold as the Monotype 80 (this last machine is also being sold by Interscan, who call it WordCom, and by Olympia).

Programmability is a novel feature, that several word processors

In the foreground is the Xerox 850 Page Display System, showing the large, black-on-white screen and the cursor control disc. The 850 Display Typing System, which has a single-line display, is in the background.

Conference offers an up-to-date assessment

THE value of OCR in word processing was emphasised by Dale Kutnick at the Word Processing Conference. It is, more than drafters on ordinary typewriters and then typed them into a WP by OCR, rather than type them on the WP straight from the keyboard.

This saves on capital investment on WP keyboards. "Why use a \$15,000-plus machine to do something that can be accomplished equally well with an 800 machine?" he asked.

Kutnick is director of market research at the Yankee Group, a consultancy based in Cambridge, Massachusetts. He was one of three American gurus who were among the speakers at the conference, "Word Processing - An Up-to-Date Assessment," which ran concurrently with the exhibition. The others were Phil Dorn, of Dorn Computer Consultants, and Jeb Eddy from Dataquest, based in the heart of Silicon Valley.

The importance of phototypesetting direct from word processors was emphasised by Jeff Thomas, of the Solicitors Law Stationery Society, and Harry Selvey, a communications manager from BP.

Great minds think alike in paperless communication

Pictured right to the new Magna II from A.B. Dick, costing £5,990. It uses magnetic cards for storage, both of text and user-defined programs.

processors on show now have: the DEC WS78, the A.B. Dick 850 range among them. This allows the user to record a sequence of editing keystrokes in the memory, and then perform long repetitive operations automatically, in the same way as some calculators now work.

This promises to be very useful. Of the new models on show, the star was definitely the Xerox 850 Page Display System. It is so new to the UK that the Rank Xerox stuff themselves know not much about it, and it has a suitably astronomical price: £11,050 to buy, or £420 a month to rent. Its most impressive feature is the large screen, 102 characters wide by 70 lines high, thus big enough to show a full page at one time and make layout considerably easier. The characters are clear and are displayed black on white, and this being much more like paper than many WP screens, it will probably appeal to typists.

The cursor on the 850 is moved about by means of a capacitative disc. According to where you put your fingers on the disc, the cursor moves in the corresponding direction. This is quite a convenient device but it struck some users as rather too much of a gimmick.

The 850 uses floppy discs for

storage. There are relatively few function buttons on the keyboard, most operations being selected from a "menu" on the screen. All the features of the 800 screenless machine are there, together with new ones such as automatic expansion of abbreviations. User programming is done with a special command language, typed as text.

Another newcomer was the Digital Equipment WS78 stand-alone machine, which is sold by Hamilton Rentals. This costs

£9,975 and incorporates the usual twin floppy disc drives and Diablo daisy wheel printer. The command language is conventional, using both menus and a large number of colour-coded function buttons. Unlike most screen systems, the cursor cannot move about the screen but stays always on the bottom line.

Documents can be put together from standard "boilerplate" paragraphs, and letters can be typed repetitively with addresses inserted from a name and address file. The insertion program can be quite complicated, using "IF" instructions operating on data in the address file.

Also on the WS78, function keys can be defined as "macros," so that one key represents a sequence of keystrokes, and these macros can even be nested. This feature is used for tasks such as moving columns of figures left or right, as the machine has no special table mode for that purpose.

Other new stand-alone machines were introduced by Siemens, and by Fortronica, the Scottish firm which hitherto has specialised in banking terminals. Scientific applications are receiving more attention, in that

several machines can now produce complicated mathematical typing, with subscripts and superscripts, Greek letters, and scientific symbols. Among these machines were the Logica VTS/100, the Monotype 80, and Vydec's systems.

A sheet feeder-stacker for the ubiquitous Qume printer was on show on the Facit-Addo stand. This can be used on any Qume printer, requiring only a form-feed code from the software to drive it. It has the disadvantage that the typed sheets are stacked in reverse order.

Making a guest appearance on the Logica stand was Cy Endfield, inventor of the Microwriter, which was featured in Computer Weekly on May 11. His hand-held word processor attracted plenty of attention.

Mental indigestion was the main problem of many visitors, faced with such a large array of machines that appear on the surface all to be the same but differ. One visitor took to striding on to stands and saying, "Right. Why is your machine better than all the others?"

Understanding the significance of the subtle differences between systems will require a great deal of user education.

One exhibitor reported considerably higher sophistication among his enquirers than last year. Many had quite a good idea of what they were looking for, he said, and some even had checklists of features.

CA-SORT MAKES DATAPRO HONOR ROLL 3RD TIME RUNNING

To be sure, there were 31 other software packages on the 1977 Datapro Honor Roll ... selected from thousands of software products.

But only twelve made it for the 3rd time ... and none of the other 31 received a higher rating than CA-SORT for "overall satisfaction".

In fact, of all 32 products mentioned, CA-SORT obtained the second highest average rating.

The chart illustrated here shows how CA-SORT fared in all seven rated categories.

Highest rating for each category is 4. CA-SORT rated second highest for all parameters.

Overall satisfaction	3.8
Throughput/efficiency	3.8
Ease of installation	3.7
Ease of use	3.6
Documentation	3.6
Vendor technical support	3.2
Training	3.4

CA-SORT's Honor Roll rating is reflected in the number of its users worldwide.

Over 2,600 users daily enjoy

savings in system resources and increased throughput every time they run a sort.

Isn't it time for you to optimize your sorting operations?

Why not call your nearest CA marketing representative and have him show you how many ways CA-SORT can help streamline your sorting tasks?

CA-SORT installs in ten minutes with absolutely no interruption to your daily work flow.

You can evaluate CA-SORT for 14 days ... entirely without obligation. Send the coupon in today for prompt action!

COMPUTER ASSOCIATES

DATAPRO, a well known American research organization, conducts a survey each year to determine the most valued software packages in use in the USA. To our knowledge, CA-SORT, a three-time winner, is the only European package to achieve this coveted award.

David Toney, Computer Associates (U.K.) Ltd., Park House, Park Street, Mordenhead, Barrow, Tel: (0628) 30318

COMPUTER WEEKLY'S NEW JOURNAL IS TURNING OUT TO BE A LOAD OF PULL.

LAUNCHED SEPTEMBER 1977-ALREADY AVERAGING 2500 ENQUIRIES AN ISSUE.

This big product-news journal, within six months of its launching, is itself big product news!

Our latest issue received 3,600 enquiries and look where they're coming from! A precision-planned readership comprising 18,000 key computer executives in the U.K. and 24,000 in Europe ... while terms of circulation control have now been extended to include 6,600 electronics design engineers, most of them specifying equipment for OEM manufacturers, the rest DP managers and Systems House executives with direct purchasing power.

Each month Computer Products International publishes a special supplement covering a particular range of hardware. In May, we're spotlighting Microprocessors; in June Teleprocessing Monitors; July Plotters and in September 8-bit Minicomputers.

But whatever computer product or service you're offering, an advertisement in CPI will give you a lot of new pull.

For more facts, ring Display Ad. Manager Steve Meadows on 01-261 8000 or direct line 01-261 8293.

The problem of finding suitable sales staff

IT has been apparent for some considerable time that the availability of competent salesmen with a proven record of sales success within the computer services industry is extremely limited.

The reasons are basically simply:

1. Salesmen need to have very special reasons for leaving one bureau to go and work with another for much the same rewards. Such apparent justifications as more effective management, broader product range, success conducive environment, greater personal freedom, greater potential rewards, etc. are somewhat amorphous and mean much more to management inside, than candidates outside. Such intangibles are regarded with suspicion by potential recruits, and generally represent insufficient justification for returning to the hazards of the "commission trough".

2. The emergence of the microcomputer, with its demand for commercial applications expertise, has created an attractive diversion for successful salesmen within the services sector wishing to advance their income and experience.

3. The computer industry, with the exception of some mainframe manufacturers, is by and large not investing in the growth of new sales people, yet at the same time individual sales forces are being expanded in order to sustain very high growth rates. This has resulted in an incestuous situation where companies are "poaching" staff from each other and at the same time making it possible for the most incompetent sales personnel to survive.

Salesmen usually change jobs for one of four reasons: enhanced status; greater assured income; widening of product experience; and greater career prospects.

Of these, the first two are far and away the most typical. Other justifications such as personal ambition, company policy, etc. are often as not excuses for personal failure.

Frustrating though it might appear from the point of view of the computer services sector, it may well be that it could have to resign itself to becoming the training ground for the industry as a whole, ie the point of entry via which salesmen can move into the total computer industry. If this is so, then the implications of a constantly moving sales population will have to be accepted and managed accordingly.

In this context, and from the point of view of its own increasing needs, it is essential that typical "stop-go" recruitment is replaced by an ongoing recruitment strategy for the location and training of new personnel. Implicit in this attitude is the need for management to understand, and accept, the need for ongoing training and

the related increase this will bring about in sales costs.

There are undoubtedly many men and women within the computer industry who have much experience of computers and applications and would be attracted to selling as a career. However, it is likely that the people most likely to succeed are those who have already proved their ability to establish a good working relationship with end users.

While some successful salesmen have come from an operational background, people from this environment tend to be remote from the client's actual applications problem, ie, they understand tools rather than applications solutions.

Sales support analysts are a more obvious source of good material, for by the very nature of their function they are constantly exposed to client situations, proposals, presentations, general communications and so on.

The location of sales recruits from outside the computer industry is a function of one or both of two disciplines: selling skills and applications experience.

If one accepts that the prime function of the salesman is to sell benefits, then to a degree, any accomplished salesman should be able to sell anything. However, the related necessity of being able to establish professional credibility via a complete understanding of the client's problem, and relate it to a computer-based solution, demands a reasonably high level of intelligence, and the ability to communicate effectively at all levels. If this can be reinforced by meaningful experience within a related business environment, so much the better.

In the commercial applications context, a salesman who has successfully sold clerical systems or office equipment, often has many of the basic skills and disciplines to succeed in the computer services industry. The major change of discipline in this context is often a significant increase in the duration of the sales cycle.

On the other hand, there are many people outside the computer industry who are well-versed in commercial and technical applications with both the characteristics and aspirations to make effective salesmen. Their technical ability to understand the client's problem, certainly gives them a degree of immediate credibility. However, many such people grossly underestimate the level of work discipline and frustration involved in selling, and the assessment of individual applicants needs to be most rigorous in determining that chosen candidates have the necessary characteristics for success in a sales career.

Admittedly, needs to be met in a quick way that the "commission trough" is achieved

In terms of both company promotion and candidate response. The use of anonymous advertising via a recruitment agency should be limited to situations which might indicate a company, failure, cause problems with existing employees, or repeat a failed recruitment exercise. For this reason, it is important that the client's marketing depart-

who read the similar columns in the Sunday Times do so for reasons both of need and interest. Certainly, active business people, by and large, have more time for reading newspapers on the weekend than during the week.

Many companies turn their back on the recruitment of sales trainees because they see them

Alan Williams is a director of Sales and Marketing Services Association of Companies, providing market research, sales training, product promotion, and recruitment services to the computer industry. He has previously worked in sales and marketing with Unilever, Firth Cleveland, IBM, Control Data and UCC.

ment, and in particular public relations people, are also involved in the exercise. The appearance of advertisements should not be ad hoc but planned from the outset as an ongoing strategy.

The best medium for the location of personnel already employed within the computer industry is the computer Press. The speed at which advertisements can be placed is four to six times faster than the national Press. The cost can be seven times less than that of national newspapers. Response can be good, but like all advertising, is a direct function of the precise nature of the job and the availability of directly compatible personnel. Any advertisement can be worded to give a heavy response without attracting the right applicants.

For the location of people outside the industry, there are two principal journals, *The Sunday Times*, and *The Daily Telegraph*. By and large, people who read the job advertisements in the *Daily Telegraph* are actually looking for a job. Those

as a net loss for at least the first year of employment. Those who do so also tend to think of the salesmen as someone who sells all the company's products to the total marketplace. It is not necessary for the salesman to be fluent in his company's total product portfolio to achieve sales success.

The vertical training approach used by Sales and Marketing Services relates selling skills to a particular product or range of products within a specific marketplace or industry. All sales and product training is locked into that avenue.

This is followed by campaign selling in the field so that classroom information is consolidated into "real-world" action. During such periods, all salesmen are actively selling the company's products, not just "swanning" around as observers of the selling process. This phase is then extended by further training to add further product/mark knowledge and new selling skills as well as rectify existing problems. The process

then continues until the total sales cycle and the appropriate product portfolio have been completely covered.

This type of training programme is not ad hoc. It is a planned commitment which is phased to match a consolidated recruitment strategy. A typical training cycle might cover a period of six to 12 months during which time each salesman will have undergone 30/40 days of formal classroom training. This would also be augmented by field-sales guidance, supervision and evaluation provided by the company's own sales management.

The costs related to the training aspects of such an exercise have to take into account both the preparation of the training programme which typically includes both standard and customised modules, and actual classroom presentation. Clearly, there is a wide range of cost depending on content, duration, class size, number of instructors, and more particularly, the proportion of product training which can be performed by the computer itself. However, a typical cost per head external charge for a total training cycle should be in the order of £1,000 to £1,200 per salesman, ie, the same level of cost per head that most companies are quite happy to pay in recruitment fees for unproven salesmen.

Generalised ad hoc training can be obtained at a much lower cost. However, it tends to make little impression on the overall performance of a sales force. Effective sales training should enable a salesman to go on to territory knowing exactly what he is selling, to whom he is selling, whom he is selling against, how to gain optimum benefit from his clients from his company and its resources, and have a clear understanding of his company's sales strategy.

By Alan Williams
of Sales and Marketing Recruiters

There can never be any guarantee about the return to be gained from investing in the training of new people, neither are there similar guarantees related to apparently experienced personnel. However, the "home grown" product tends to be more loyal and less cynical than a ready-made imports. By and large, people new to the industry tend to be more enthusiastic than the average established salesmen. They have fewer preconceived ideas about the scope of the computer industry, its products, its marketplace, and more particularly the benefits of effective selling and hard work.

It may well be that many service and hardware companies continue to limit recruitment to experienced computer salesmen because they do not have the resources to train or time to recruit newcomers. If this is the case, then consistent failure to recruit the quality of salesmen they require may yet persuade them to invest in training their own.

In this case, the usage of an external organisation such as Sales and Marketing Services, which can handle both recruitment and training, makes a lot of sense.

On the other hand, it may be that some companies already have educational resources which can be augmented to cater for sales training and personnel staff who can effectively handle recruitment.

Whatever the situation, it is clear that the present shortage of effective salesmen will not be overcome until the industry takes on a firm commitment to invest in the growth of new salesmen, and at the same time flings its presently incestuous recruitment net further afield than its own territory.

A THREE-DAY course on the Pacific finite element system has been organised by Compu-Tec in conjunction with Pacific Ltd. The course, which runs from July 13-15 at Cranbrook, Staffs, will concentrate on the use of the finite element method and participants will be able to submit and run their own examples during the course. Further information can be obtained from Mr. Ogilvy, Technical Services Manager, 1st Floor, 251.

A COURSE on computer audit techniques is being offered by the City University Business School on July 4-5. It will include lectures, discussions, case studies and practical work, and a video link with the University computer will illustrate some of the features. Further information from Patricia Harrison, Marketing - Postgraduate Centre, Overseas College, 81, 808 261.

A RESIDENTIAL database workshop is being held by Lifford and Russell Management Systems on July 3-7. It is intended for technical staff and technical managers and aims to provide them with a detailed insight into methodology for developing database systems. Details from Mrs. Ellen Lee, Course Registrar, Lifford and Russell Management Systems Ltd, 22, Newmarket Street, London W1P 2EP, tel: 01-257 4999.

LOGIC and Microprocessor System Design is the title of a four-day intensive course to be held by Interprojects Ltd in conjunction with the University of Liverpool. The course will run from July 16-19, at the University's Greenbank House, Liverpool L17, 3L. The course is designed to enable designers and users of digital control and computer systems to learn the requirements and attain control over the behaviour of their systems. Details from Interprojects Ltd, 25 Church Street, Edmonstone, London NW9 9DQ, tel: 01-852 8998.

AN introduction to modern digital systems is offered by the University of Leeds on September 16-22. Aimed at a wide range of people, such as science teachers, medical engineers, computer scientists as well as those from the more obvious engineering categories, the course is tailored to the individual; for example, the high work participants can exercise choice in the subject and level of activities. Further details from Dr. G. E. Lockhart, Dept of Electrical and Electronic Engineering, The University of Leeds LS2 9JT, tel: 0532 757170.

COURSES on inventory management and control manufacturing/production control concepts, effective presentation

techniques and effective marketing and selling computer services are scheduled by MMS for September. With reports later in the year. For details of these and others, apply to MMS Computer and Business Consultants Ltd, MMS House, 49 Chapel Road, Worthing, Sussex, tel: Worthing 34785.

A SCHEDULE of training courses for the MSS General Ledger and Financial Reporting System has been released by BSC. The courses are: 1. Would you buy a used DP job from this man?

"No, seriously squire, lovely little number. Could be up to five grand a year... well, with a little overtime... well, with quite a bit of overtime actually. But anyway, the previous gent was very satisfied, very happy - he's in South America now they tell me. Still, this little Catchpole 69/1 1/2, it's lovely little machine, a real little mover. 'Course, the only system they've actually managed to run on it is the canteen menus, but Rome wasn't built in a day, was it?"

Ever had the feeling that the guy trying to sell you into a new DP job would be far more at home selling you a 1963 Vauxhall Cresta? Quite probably he has the same feeling, too. Because a lot of people have come into the DP recruitment market convinced they've found an easy way to make a fast buck. And a lot of people have been disappointed. At Knight Computer Services, we've never had any such illusions. Because one of

the things our long years in the computer business have taught us is that when you're looking for men and women to do a job and do it well, you can't afford to take short cuts.

So instead of talking you into a job, we'll listen while you talk about the sort of job you want, and why. (If you're going for a senior job, we're happy to bend our ears for anything up to an hour.) We'll put a true value on your experience, and a new perspective on your whole career. And because even in the computer business, people are still stubbornly individual, we'll get to know you as a person, not just as a list of qualifications and experience. And of course, we'll make sure any job we put your way does things for your earnings.

So you could find yourself looking for a new car, instead of just another used one.

SYSTEMS ANALYSTS & PROGRAMMERS.

This division of Rolls-Royce specialises in applying aero-engine technology to marine and industrial uses. Our markets are world-wide, with every project presenting its own individual problems. To systems people with initiative and ingenuity we offer a unique and challenging environment.

Systems teams are already involved in the Production, Spares and Accounts areas. Now we plan further activities which means we want additional teams of Systems and Programming staff with relevant experience. There are opportunities at all levels. Our training schemes will expand your skills and maintain them up to the high standards you'd expect us to demand.

Currently we program in COBOL on

ICL 1900 hardware under George 2. In the light of our future requirements we are actively reviewing our hardware plans. We expect to implement database systems in our next phase of development.

Salaries are highly competitive. House prices are reasonable. Overtime is paid, and assistance with removal expenses will be provided where appropriate.

If you would like to talk over the vacancies before applying, please ring and ask for the Chief Systems Analyst or the Chief Programmer on ext. 228.

Or write for an application form to: Mrs K Brown, Personnel Department, Rolls-Royce Limited, Industrial & Marine Division, PO Box 72, Ansty, Coventry, CV7 9JR.

Rolls-Royce Limited, Industrial and Marine Division

Analyst/Programmer

How does your experience measure up?

Polaroid are an internationally famous company manufacturing 'instant picture' cameras, film and photographic apparatus for a wide variety of applications.

Data Processing systems are playing an increasing role in the continued growth of the company and recent developments include the implementation of online IMS Database systems in the areas of Materials Management and Personnel.

Development is commencing on extending the range of online systems to Accounting, Purchasing, and Financial and Production Planning.

We are therefore looking for a first-class Analyst/Programmer to perform Systems Analysis and Design, Database Design, Programming and tasks related to the implementation and maintenance of these systems.

The Hardware and Software facilities include IBM 370-148, OS/VS1, IMS/DC, Datasman and Data Capture devices situated in user areas e.g. ITT 3280 screens.

If you have experience of any 3 of the following, we should like to hear from you -

IBM/370 IMS/DC
JCL Data Dictionary
COBOL Online Systems
OS/VS Manufacturing/Financial Systems
DLI Distributed Processing

In-house and external training will be provided as appropriate.

As an international company we are in a position to offer a highly competitive salary plus a wide range of fringe benefits. Our modern plant is situated close to Loch Lomond and within easy travelling distance of Glasgow.

We can offer not only excellent working conditions in an expanding company, but an environment ideally suited to the pursuit of leisure activities. Telephone Alexandria 54141 Extension 228 for an application form or write to The Personnel Department, Polaroid (UK) Ltd., Vale of Leven Industrial Estate, Dumbarton G82 3PW.

COMPUTER SCIENTISTS

SOFTWARE: Engineers, senior analysts or scientific programmers, needed to develop real-time systems software, overall system design and operating system organisation for applications stated below.

HARDWARE: Senior eng's. needed with computer hardware and systems design/development experience to support aircraft, space craft, missiles and defence system projects.

LONG TERM, highly paid freelance consultancy posts in Germany or France.

Please send detailed resume including educational attainments to:

Contact: CHRIS PHILLIPS or BOB CARR on 01-388 0036.

Fraser Williams
computer consultants

JBA

We have been retained by one of the leading computer services organisations in Europe and the U.S.A. to recruit a number of professional and technical staff to join the expanding systems development teams. The growth of this group is part of the overall company plans to cater for the demand of its services over the next twelve months. The company, which was founded in 1949, has an impressive record of success and continues to set the standards in this sector of the computer industry.

Programmers and Analyst Programmers

London and Manchester up to £6,000
Birmingham up to £5,000

The systems development unit designs and installs tailor-made commercial systems for clients and provides support during the initial stages of operation.

Applicants must have a minimum of two years' experience on commercial applications, such as accounting, stock control, production, etc. and must have programmed in at least one high-level language, such as COBOL, PL/I or RPG II. Fortran would also be considered.

For the Analyst/Programmer positions it is essential that candidates have been involved with the design of a major commercial system. Knowledge of on-line systems would be an advantage.

Ability to communicate with clients is essential as these positions involve considerable customer contact.

Systems Programmers Project Leader

London up to £6,000

The systems software team is responsible for the support of a large sophisticated multi-processor installation, the largest of its type in Europe.

The software includes teleprocessing, database and distributed processing facilities and offers the chance to work on new technology and software systems.

Candidates should have at least two years' experience of mainframe software, such as IBM, DEC, ICL, Burroughs, Honeywell or Univac, preferably in a multi-language environment. Ability to write Assembler is obviously essential together with a practical knowledge of diagnosis techniques.

Manchester up to £6,500

A Project Leader is required for the Company's Manchester office to take responsibility for projects through all the implementation phases.

Candidates should have a sound commercial background and at least one years experience in a project leader position. Experience of controlling teams against time and financial budgets is essential.

Applicants must be capable of demonstrating responsibility for the successful implementation of at least one significant project, including budget preparation, and be prepared to apply these skills in a sales intensive environment.

This is a positive opportunity to work with professionals in a dynamic and expanding organisation. As well as providing a challenging and satisfying career the company can offer:

* Excellent salaries * Pension & Life Assurance * Free BUPA

Apply in the first instance to

JAMES BAKER ASSOCIATES, International Personnel Consultants

16 Maddox Street, London W.1. Tel: 01-491 4478

BRISTOL... BRISTOL... BRISTOL

Due to a proposed expansion scheme which will considerably enhance their existing data processing facilities, our Clients a medium sized engineering company located in Bristol, wish to appoint the following:

Project Leaders

Reporting directly to the Data Processing Manager, Project Leaders will be required to build an extremely important role in the proposed development of Batch and On-Line communication systems in two specific user areas.

The majority of the development work will occur within production and stock control. Suitable candidates will require either as a Project Leader or Senior Analyst relevant experience within a manufacturing environment.

The development of commercial systems although less complex is considered of equal importance. In terms of relevant experience applicants will require considerable prior involvement with financial systems.

Systems Analyst

Working in close liaison with a Project Leader, Analysts will be involved in the design of Batch and On-Line Systems for both the commercial and manufacturing areas.

The position would most suit an Analyst with 2/3 years' systems experience. However, serious consideration would be given to applicants with either an O/M background or a part qualified accountant with commercial accounting experience.

Programmers

Although there is a requirement for more than one Programmer our Clients are particularly interested in recruiting as a Senior Cobol Programmer, an applicant having had considerable ICL 1800 applications/standard software experience.

For the other posts ICL experience is not essential, although beneficial. Consideration will be given to applicants completing either a BSc/BEng in Computer Studies.

9A Princess Victoria Street
Clifton, BRISTOL 8.

Senior Systems Analyst

Message Switching Software
Home counties to £8,000

Our client, a major multi-national company, prominent in the defence systems industry, has vacancies at both senior and intermediate levels for analysts specialising in the development of message switching and communications software. Successful candidates will have the opportunity to pursue creative work on challenging projects in a stimulating environment involving multi-processor systems. Applicants should have had experience with CORAL 66 or Macro 11 and be familiar with RSX 11M and RSX 11S. Career prospects are excellent, starting salaries realistic and there is a full range of company benefits.

IF YOU TALK OUR LANGUAGE LET'S TALK BUSINESS

SENIOR SOFTWARE ENGINEERS

Systeme is a major British manufacturer of mini-computer based business systems, with a remarkable track record of consistent success. It offers a highly stimulating working environment and significant opportunities for staff to extend their experience and income.

The company's development plans require the appointment of SENIOR SOFTWARE ENGINEERS.

A minimum of three years' relevant experience is required, preferably including a period of working in assembler code.

At system level, successful applicants will work in an expanding department and will be responsible for major software developments. These projects will include developments related to operating systems and tele-processing monitors for FCP II's and VAX II's. An attractive salary is offered with participation in a bonus scheme. Pension scheme and a relocation assistance available.

Write or telephone to:
IAN MCNEILL, Systems Limited
Concourse Computer Centre
432 Dewsbury Road, LEEDS LS11 7DF
Tel: 0532 707411.

SYSTEME

Software Manager

Hertfordshire
The dynamic software development group of a U.S.A. computer manufacturing company now require a manager to take over part of the current project team. The work is technically orientated involving the operating systems and communications aspects of mini-computer processing within terminal networks. Candidates must have proven man-management experience, be highly communicative and have the flexibility to handle all the duties associated with new product development. A heavy software background and ambitious aspirations are essential.

Excellent prospects and satisfying career goals. Contact Mike Croemer

Systems Consultants

Berkshire
A major communications network that will link sites in the U.S.A., U.K. and Europe is just one of the projects being developed by this important American company. Through internal promotion, two vacancies have arisen in their European Systems team which provides support and advice on project development. Ideal candidates will have considerable experience of IBM hardware and software, and will have controlled at least one project of reasonable size from start to finish. The ability to deal with, and advise, management at all levels is essential and some appreciation of management problems would be an advantage.

International travel, high salaries and unlimited career opportunities are available for the right people. Contact: Andy Wright

Programmer/Analyst

Basildon
Our client is a well established manufacturing company with an expanding world-wide market. Due to this expansion, they now wish to recruit a Programmer/Analyst with 18 months + COBOL experience under OS. Experience with BOMP or financial applications would be an asset. However, training will be given where appropriate. In addition to the chance of involvement in analytical design work, self-motivated d.p. professionals will have a progressive career path. The company also offers re-location assistance, where applicable, a subsidised canteen and an excellent pension scheme. The salary quoted could be significantly higher for the successful candidate with ideal experience. Great opportunity to maintain high living standards by not travelling into London. Contact: Mike Croemer

For further information on any of the above vacancies please contact the appropriate consultant. If your qualifications do not match the above positions but you are seeking other opportunities please contact us anyway.

JAMES BAKER ASSOCIATES, International Personnel Consultants
16 Maddox Street, London W1. Tel: 01-491 4478

Business Systems Consultants

South London based
Our client, one of the major computer manufacturers in the UK, has opportunities for Business Systems Consultants to join the Customer Support group based in South London. Applicants should have five years' experience in data processing with the majority of that spent in the design and implementation of commercial applications. For the more senior positions candidates must have undertaken feasibility studies and been involved in defining user department requirements. The Company is looking for staff with maturity, sound business background, diplomacy and the ability to meet objectives with minimal supervision. Excellent salaries and career development. Retraining available. Contact: Jim Baker

Engineers

Surry
Our client, a well established computer services organisation, is about to form its own computer maintenance group and has vacancies for two engineers. The existing mainframe installation will be expanded later this year to include DEC 10 systems. Applicants should have at least two years' experience of the maintenance of the DEC 10 or PDP 11, although a background of similar hardware would be considered. Knowledge of software, diagnostics, unit and board repair is obviously essential. This is an ideal opportunity for career development since responsibility and promotion will be given at an early stage. Excellent basic salaries, shift call out allowances, LV's and other generous fringe benefits, including relocation where applicable. Contact: Jim Baker

Analyst/Programmer

City
A specialist city bank has retained us to recruit an Analyst/Programmer to help in the development and maintenance of a highly sophisticated real-time foreign exchange system. The ideal candidate will have experience of programming in MACRO-11 under RSX-11M on PDP11-70 in a financial/banking environment. However, if you have good, solid experience of programming and design work in the financial field and would welcome the opportunity to be retrained, then please apply immediately. Excellent salary and several valuable fringe benefits are offered for the right experience. Contact: Andy Wright

Data Processing Staff
£3,000 - £5,500 p.a.
Leading life assurance office,
Salisbury, Wilts.

We are a very successful and forward-looking life office dedicated to intense computer involvement with on-line applications for all user departments, including New Business, Policy Servicing and Actuarial Departments. We need experienced, ambitious people at various levels to strengthen our small development team.

We can offer you really stimulating and challenging work using the latest techniques, with good opportunities for progress and professional development. As a bonus you can live and work in Salisbury, a cathedral city in a pleasantly rural area, convenient for Bournemouth, Poole and Southampton.

Two Systems Analysts (up to £5500)

Job: Systems development and business specification level and subsequent implementation of new systems. Our requirements: Education to degree or 'A' level standard, five years DP experience, two as analyst. (Good background in business systems level).

Senior Programmer (c. £5000)

Job: Advising on computer system design. Our requirements: ICL 1900 COBOL experience using George 2, 2+ or 3. Communications background (e.g. DRIVER). Knowledge of database and structured programming helpful.

Computer Operators

(up to £3000 including shift allowances)
Our requirements: Age at least 20, educated to 'A' level standard. Minimum of one year's operating experience on disc based ICL 1900 using George 2 or George 2+.

In addition to a good salary we offer excellent fringe benefits. Please apply quoting reference No. HO/24 to:-

Miss J. E. Barry
Personnel & Training Manager
DE PRODUCE
Dolphin House, New Street
Salisbury, SP1 2QQ, Wilts.

Applications are invited for
the following posts:
Faculty of Business - Banking Precinct
Department of Systems and ComputingLecturer II
Business Administration

To teach in the field of business administration, organisation, or policy. Some knowledge of computing applications would be an advantage. Applicants should be graduates with an interest in new developments in teaching methods and in part-time education. (Ref. S/BE 118A)

Lecturer II
Systems and Programming

Applicants for this post should have recent commercial, industrial or teaching experience in Operating Systems and Programming in COBOL. Appropriate academic qualifications should be held and experience of ICL 1, 600 series would be an advantage. (Ref. S/BE 118B)

Salary Scale: Lecturer II: £4,101-£8,558 per annum (Plus applicable London Allowance)

The above posts are available for appointments as at 1st September, 1978.

Further details and application form from:
The Senior Academic Personnel Officer (2)
North East London Polytechnic
Forest Road, London E7 4JB
Telephone: 01-527 2272 (extension 20)

Closing date: 30th June, 1978.

MAKE A MOVE TO COVENTRY

"SYSTEMS AND PROGRAMMING OPPORTUNITIES"

Our client a major manufacturing company based in Coventry wishes to recruit the following D.P. staff to augment their existing team.

At present the company are using a Univac 9070 running under O.S.4. Later this year a second machine will be delivered operating under V.S.9.

They are presently involved in the complete redevelopment of several of their major systems, using on line V.D.U.'s.

Training courses are available for candidates without Univac experience.

PROJECT LEADER to £5650

- At least four years' commercial systems including Production Control
- The ability for solving business problems
- Able to motivate and communicate effectively

SENIOR ANALYSTS c£5000

- Two years' commercial systems
- The ability to work independently
- Knowledge of on line techniques

PROGRAMMERS c£4500

- At least 12 months COBOL
- The desire to progress into systems
- The ability to work in a team environment

Contact: Graham Aston, M.E.C.I.

MARTINS COMPUTER SERVICES

First Floor, Western House, opposite Library Hotel, Broadwood, Coventry, Warwickshire CV1 1JG. Telephone 021-643 2111. 24 hour answering service. Evenings and weekends 021-644 0931.

We are now able to interview until 6.30 p.m. and Saturday morning by appointment.

Large company benefits apply including: Flexitime; Pension Scheme; Subsidised Canteen; Sports and Social Club; Relocation Expenses; Etc.

Although this company is situated in Coventry, it is easily accessible to the M6 motorway with low city housing nearby.

Berkshire + Relocation

Our client is a U.S. multi-national producing and marketing a complete range of mini computers to scientific and commercial users. Growth is fastest in the commercial area, and in order to provide high quality software products and environments to commercial users, they are seeking additional Software Programmers to strengthen their development activity.

The European Headquarters of the company is located in Berkshire, including one of the two software development centres in the world. Their products are produced for the world market and, as might be expected of an organisation of this stature, professional standards are high and the working environment congenial.

The people sought will have approximately 3 years' software development experience at Assembler level and will have an unparalleled opportunity to enlarge their practical experience on compilers or data base systems. They will receive excellent fringe benefits and salary up to £7000.

Enquiries concerning these openings, please, to Tony Baker on 01-499 4501.

RW 24/5

★ Opportunity for Early Promotion ★

Our client is the UK subsidiary of an American company engaged in the manufacture of interactive terminals.

The parent company has a well established computing function, and the UK subsidiary is now about to install its first ICL 2903. As a result, they now wish to recruit a capable and experienced Cobol Programmer to handle the implementation of a wide variety of accounting applications, some of which will be based on systems operational in the USA, and others which he will create himself.

The company's DP plans envisage a continuous growth and development for at least 4-5 years, and as there are currently no plans to appoint a Systems or DP Manager, promotion prospects could be particularly good for the Programmer appointed.

In addition to practical programming work, there will be early involvement in systems design and you can expect to be working closely with the US computer operation in Texas.

Enquiries in the first instance by letter to Tony Baker on 01-499 4501

RW 24/6

Technical Support

Reading

£3,300-£5,500

The following vacancies are at a computer centre providing an internal bureau service for a software house. Current hardware includes an ICL 2970 as well as two ICL 1903A and an ICL 2904 supporting a terminal network.

2800 Systems

The Support Technicians' function is to support and maintain all 2800 services provided by the centre and to provide technical support to operations units and users.

Candidates will probably have 4 years' experience in a computer operations or systems and programming environment with one year in a 2800 VME support role. Consideration will also be given to less experienced candidates with good potential and a minimum of 1 or 2 years' programming experience with a degree or HND qualification. They must have a personality suited to a support function and must be able to communicate clearly, orally and in writing. They must be keen to further their technical knowledge by learning constantly about new products and development units' work. Ref: 520/CW/Ronde Nuts.

1900 & Small Systems

The Support Technicians' function is to support and maintain all 1900 and small systems services provided by the centre and to provide technical support to operations units and users.

Applicants are expected to have a minimum of 1 or 2 years' programming experience with a degree or HND qualification, although 4 years' experience in computer operations and/or a systems programming background would be preferable, ideally to include one year in a 1900 George III support role. They must be capable of absorbing technical information on standard and new products and must be able to respond to support demands at all times. They must have very good communicating skills and must be willing to work in a servicing environment. Ref: 521/CW/Ronde Nuts.

If your experience is in line with the above requirements, please telephone or write to Ronde Nuts on 01-242 9356 (day) or 01-874 6372 (evenings/weekends).

Accord Computer Efficiency

Sophisticated HOLLAND Software

We are a recruiting company which has earned an outstanding reputation for high class software design and implementation in Europe. In return for your skills in any of the above sectors, we would like to offer programmers, analysts and consultants the following:

- ★ Technical and Scientific projects
- ★ Consistent career progression
- ★ Competitive Continental salaries
- ★ First class conditions of employment
- ★ Relocation paid, including family if applicable

Projects currently engaged upon are extremely varied and comprehensive in terms of the use of mini-computers and involve interesting and often complex systems.

Telephone Bill Seymour or Andrew Ellis for further details regarding positions available; and background information about living in Holland.

Accord Computer Efficiency

Bill Seymour, Portland House, UK Office,
UK Office, 4 Great Portland Street, London W1N 5AA England. Tel: 01-580 3754
Andrew Ellis, Sarphedijk 36, Amsterdam, Holland. Tel: 020 264664/264682

International Small Systems Project Manager

MAJOR INTERNATIONAL BANK

Salary: Up to £8,000 per annum

Plus normal banking fringe benefits

We are specifically looking for someone with experience of NCR 299 and 399. Our client is a major International Bank installing a number of accounting systems throughout the world, covering such areas as the Middle East, India and the Far East.

We are looking for someone who has experience of the hardware mentioned, ideally, someone who has already worked for the relevant manufacturer, who would enjoy working for a significant period of time overseas. You would be totally responsible for installing a package that has already been developed but may require some modification, and you will have to spend a lot of time working on your own. Therefore, you will be a self-starter, and not someone who has to constantly "refer to base" for instructions.

Your ideal background would be a data processing one, then banking but more important, experience of 299 or 399. Quite honestly, if you do not have the latter experience you will be wasting your time in applying.

The opportunities are very good indeed, our clients regard this as a training base for about two years and thereafter, promotion is almost certain if you perform well. You should be able to demonstrate between two and three years' experience of working on the relevant hardware. You will have been responsible for at least one series of systems and will be anxious to move into a larger data processing area which this position will eventually lead to.

The international travel aspect is either attractive or it isn't, you have to be prepared to "pack your bags" and go at short notice, therefore, if this is a deterrent this isn't for you. However, if you feel you have the drive, the tact (most important), enthusiasm and technical ability, we would like to meet you.

The fringe benefits are excellent, they include a low interest mortgage, free medical services, non-contributory pension and a subsidised luncheon.

Please apply to John Goldsmith, Ref. 1886/CW.

WE ARE ALWAYS INTERESTED IN HELPING YOU WITH YOUR CAREER
John Goldsmith (Computer Recruitment) Ltd., 15, Buckingham Palace Road, London, S.W.1.
Tel: 01-828 5356 - 24 hour answerphone service.

JOHN GOLDSMITH (Computer Recruitment) Ltd.

Data Processing Manager

INTERNATIONAL BANK BASED IN KARACHI, PAKISTAN

Excellent Income Package

We want to meet a Pakistani National to take responsibility for the installation, development AND redevelopment of a number of very important accounting systems being installed by our client, a major International Bank. These systems will be installed initially in Karachi although responsibility for data processing will cover the whole of Pakistan.

We want to meet someone who has spent some time either here or in another Western country, learning the "tricks of the trade" of data processing. Probably now, you will be working as a Senior Systems Analyst or Project Manager with about six or seven years' data processing experience. The ideal specification will be someone who has come from programming then into systems and before that, will have achieved a professional qualification, ideally in the U.K.

Within the Bank's data processing unit — this is "number one in Pakistan", we are looking for someone who doesn't sit in his office all day hoping things will get done, because they don't do they? You will ensure that they do! Certainly, initially, you will have to lead from the front from the technical point of view and you will be very much dependant upon your own resources. However, as you progress successfully, your own responsibility will become much wider and eventually, encompass a wide range of locations.

The position offered is a rare opportunity, we do not remember seeing a comparable position, therefore, we are looking for someone who is prepared to relocate back to Pakistan, later if necessary, to travel elsewhere in the Middle East for our client, but first and foremost, get the new operation off the ground in an impressive way.

Please apply to John Goldsmith, Ref. 1683/CW.

WE ARE ALWAYS INTERESTED IN HELPING YOU WITH YOUR CAREER
John Goldsmith (Computer Recruitment) Ltd., 15, Buckingham Palace Road, London, S.W.1.

JOHN GOLDSMITH (Computer Recruitment) Ltd.

Software Engineering

Research & Development - Brighton

ITT Creed is a world leader in the design and manufacture of teleprinter and data-transmission equipment. As a major division of ITT Business Systems, Europe's largest telecommunications group, innovation and sophistication are the keys to our continuing success in this growth market. Which is one of the reasons why we invest heavily in software research and design for new products.

This is the environment we are offering to the Software Engineer — a man or woman — who joins us now. The team is young and highly talented, and you will be expected to match up on both counts. You will have individual responsibility for developing mini and micro-based software systems. So you must have two years' or more programming experience in Assembler, preferably with micro-computer applications.

Although an advantage, shop-floor experience of advanced automation/control systems is not a necessity. In terms of formal qualifications, however, you will need a degree or HND/HNC in Computer Science or a related subject. A distinct advantage would be some experience of hardware and computer logic.

Salary is very attractive, and a good range of company benefits includes staff residences and a progressive sick pay scheme. There are all the advantages too of our location, with the benefit of both sea and country. And naturally, where appropriate, we'll help you out with relocation expenses.

Please write or phone for an application form to: John Heath, ITT Creed Limited, Hollingbury, Brighton BN1 6AL. Tel: Brighton 507111 ext. 3523.

SYSTEMS ANALYST

£28,000

OSSENFORD
A graduate with two years' experience in a commercial environment as a programmer or analyst is required for this position. A mature personality with a practical, analytical approach to work on accounting and planning applications, assisting users and implementing new systems.

PROGRAMMER/ANALYST

£24,000

NORTH HURVEY
This is an ideal opportunity for a programmer wishing to get involved in systems development work. International Company, requiring a good programming background with RPG 11 experience.

PROGRAMMERS

£23,000

NEAR GATWICK
To work on commercial/business systems using mini-computers. At least one year's high-level or low-level programming language experience will be considered, not necessarily on mini.

SOFTWARE PROGRAMMER

£28,000

NEAR GATWICK
If you have at least one year's recent experience of writing in ASSEMBLER, preferably on mini-computers this vacancy will suit you. Experience of working on system software for a multi-processor system with communications and database is an added advantage, which will be well rewarded.

Please phone or call in for more details and an application form.

AMES PERSONNEL
TELEPHONE: 01-767 0611

London Borough of Enfield

Systems Analysts (2)

£4630 - £4900
(Phase III Award Pending)

We wish to fill two posts that have been created to assist with the Borough's development into "on-line" systems. Applicants should have a degree background in programming and systems analysis with some years' experience of either public or private sector data processing.

These posts offer a varied and demanding job in a modern office with attractive surroundings bordering rural Hertfordshire.

If you would like further information ring Ian Gray, 01-368 5555, ext. 2622.

An application form is available, upon receipt of fee, from the Borough Treasurer, PO Box 54, Civic Centre, Silver Street, Enfield EN1 3JF. Closing date 30th June, 1978. Please quote reference ORA/191.

Malmesbury, Wiltshire

Career Opportunities with Pye TMC Limited

Microprocessors Software Computer Aided Design

(Up to £7000)

The Company's Advanced Development Division is a forward looking design group, exploiting LSI technology in the application of stored programmed control to telephone switching and also the development of other advanced products for the telecommunications industry in both the Switching and Sub-Apparatus areas. The Division is situated at the Company's modern new headquarters in Malmesbury, Wiltshire.

SENIOR SOFTWARE ENGINEERS

Required to work in close collaboration with LSI circuit design engineers to produce new micro-processor based products. Applications are invited from Analysts, Programmers, preferably with Intel 8080/85 and mini-computer experience, trained in the electronics industry. A degree in a relevant discipline is preferred but evidence of the completion of self study courses or Assemblers' language together with at least 5 years' experience in this field is more important (Ref. ADD/W1).

SCIENTIFIC PROGRAMMERS

Required to work on the development of software tools for CAD design, simulation, automatic testing and advanced graphics systems as applicable to the realisation of LSI circuit design. Successful applicants will be working on computer types SCL 32

and DEC 2050. Vacancies exist at both Intermediate and Senior levels. Applications are invited from self motivated and creative people with experience of both Electronics design and Further programming. The successful applicant will have a degree in Electronics or Computer Science (Ref. ADD R B1).

These positions are open to suitably qualified men and women. The Company which is part of the multi-national Philips Group, offers the full range of benefits including subsidised canteen facilities, and discounts on group consumer products, etc. Generous relocation expenses will be paid where appropriate.

For further information phone the Personnel Department on Malmesbury 2121 or write with full details of education and career to date (quoting the appropriate reference) to the Recruitment Officer, Pye TMC Limited, Swindon Road, Malmesbury, Wiltshire, SN16 9NA.

CONSULTANCY

West London/City
Mainframe and Minis
To £8,000 + Profit Share
+ Expenses

A successful medium-sized DP consultancy has career opportunities for consultants in its mainframe and mini divisions.

For the mainframe division, we expect programmers to have at least two years' experience of COBOL, PLI or MARK IV. IBM experience would be preferable, but full re-training will be given. Analysts should have two to three years' experience in systems analysis and design with a programming background — any additional skills such as teleprocessing or data base would be useful.

Candidates for the mini division should be experienced in programming commercial minis such as DG, HP or DEC, using COBOL, FORTRAN or ASSEMBLER.

The company offers high earnings, a friendly working environment and the opportunity to work on a wide variety of systems.

FOR FURTHER INFORMATION, PLEASE CONTACT MARK IRENS, QUOTING REFERENCE NUMBER CW/36/L.

Portsmouth Polytechnic
SCHOOL OF ARCHITECTURE
**Computer
Programmer**

Post 464 (A)

A specialist is sought to create and develop computer aided architectural design programs within the School. The department has just acquired a Tektronix 4014-1 interactive graphical terminal linking to the Polytechnic's ICL 2960. The successful candidate will implement existing programs and, in collaboration with staff, develop new programs in areas of architectural education and design including computer aided learning, building utilisation, decision aiding, and acoustic, lighting and thermal design science.

Salary Scale: T3/4. Up to a maximum of £3,702 + £502 supplement per annum.

DEPARTMENT OF GEOGRAPHY
**Technician
for Computation
Laboratories**

Post 583

Duties include computer operating, digitising and data preparation in the department's computation laboratories. The successful applicant will provide technical services for a variety of computer applications in Geographical Science courses. Applicants should have experience of operating a mini computer and have eyesight suitable for digitising work from graphic and stereoscopic images. A particular interest in computer graphics/computer mapping applications and/or familiarity with BASIC or FORTRAN languages would be an advantage.

Salary Scale: T1 or T2 up to a maximum of £2,853 + £470.25 supplement per annum.

COMPUTING CENTRE
**Applications
Programmer**

Post 561 (B)

A new ICL 2960 has been installed running under the VME/8 operating system providing a computing service to the whole Polytechnic. Applications programming projects cover all aspects of the Polytechnic's work, including not only scientific and technical work but also the design and implementation of computer systems for the administration and library.

The Computing Centre seeks to recruit a programmer of graduates or equivalent qualifications, and some previous experience, who wishes to increase his/her experience by working on a large modern computer. There is a wide range of projects now being started, including graphics software, implementation of the IOMS database, and software to support minicomputers linked to the 2960.

Salary scale: AP2/4. Up to a maximum of £3,702 + £502 supplement per annum.

Application forms are available from the Staff Office, Portsmouth Polytechnic, Alexandra House, Museum Road, Portsmouth, or by telephoning Portsmouth 27851, extension 317.

**SOFTWARE ENGINEERS
COMPUTER AIDED
DESIGN AND
DRAUGHTING £6-9K**

Computervision a world leader in the manufacture and marketing of CAD systems, requires additional software engineers to join its expanding European development and support teams.

These posts will be based in Computervision's European Software Centre near Amersham and will involve occasional travel to other European Countries.

Applicants should have several years' experience of Fortran programming and preferably some knowledge of mini-computer operating systems and assembler languages. Experience in one or more of the following fields would be an advantage.

1. PC/ES design and production
2. Numerical control applications
3. Cartography
4. Communications

Please telephone for a confidential discussion or write to: 30 Fleet Street London EC4Y 1AA 01-353 0981

Home Office
Central Research Establishment
Aldermaston
**COMPUTER
SCIENTIST**

This post with the Information Division of the Central Research Establishment provides an opportunity to join a team of scientists and other operators existing in the collection and distribution of research information to forensic science laboratories throughout the country.

The successful candidate will be involved in the day-to-day maintenance and operation of a 16K Hewlett Packard 2100A computer, associated terminals and, later, a new computer (planned to come into operation next year) with VDU terminals and on-line links to the forensic science laboratories. Members of the section are encouraged to develop their own ideas for applications into fully operational systems.

Candidates, normally aged under 30, should have a degree/HND/HNC in an appropriate discipline, a knowledge of small computer systems and experience of programming in FORTRAN.

Appointment as Higher Scientific Officer (£4100-£5450) or Scientific Officer (£2840-£4410) according to qualifications and experience. Promotion prospects. Non-contributory pension scheme.

For further details on application form (to be returned by 7 July 1978) write to Civil Service Commission, Aldermaston Link, Seasingstone, Hants, RG21 1JB, or telephone Seasingstone (0258) 88551 (answering service operates outside office hours). Please quote ref: S8/19/LA.

Technical Support

We are looking for the following experienced technical support people

HARDWARE preferably with big disc knowledge.
SOFTWARE with assembler and operating systems experience.

Why change to Data General

You'll receive a competitive salary that really matches your experience. Naturally, you'll receive standard benefits including a company car allowance and be eligible for an excellent pension scheme.

You'll be based in West London, but have the opportunity to travel to Europe on special assignments.

Don't miss this opportunity

Opportunities as good as this don't happen every day at the week. So don't miss out. Write or phone Janet Field at the address below - reversing the charges if you wish.

Data General
Data General Limited, Westway House, 320 Rushway Road East, Greenford, Middlesex UB6 9DH. Tel: 01-578 9231.

Technical Author

IBM United Kingdom Laboratories Limited are looking for a Technical Author, male or female, to join its Technical Documentation department. The work involves the preparation of user and maintenance manuals for the range of program products under development in our Laboratories at Hursley Park, near Winchester, Hants.

You will probably be either: an experienced technical author who has worked on complex programming systems or a data processing professional with an aptitude for communicating in writing.

You must have the ability to negotiate with people at all levels and preferably have a degree in Information Science or a similar qualification.

An attractive salary will be negotiated in line with experience and potential. As well as a substantial employee benefits package which includes a non-contributory pension scheme and free life assurance, we offer generous assistance with relocation expenses where appropriate and variable working hours.

If you are interested, please write giving details of education and previous experience, to Mike Shute, Personnel Officer, IBM United Kingdom Laboratories Limited, Hursley Park, Winchester, Hants, quoting ref.

consultants and programmers - Manchester

consultants	to £9,000	senior programmers	to £6,000
project consultants	to £7,000	programmers	to £5,000

Hoskyns Northern Division has been in operation now for three years. In that time we have trebled in size and can point to an outstanding record of success in a wide range of projects on a wide range of hardware. In the coming year we plan to implement a further expansion programme to build on this success. To support our expansion we need further professional staff with practical experience of designing, writing and implementing commercial on-line systems, both on mainframe and mini-computers.

Opportunities exist at all levels for:

- Consultants:** to evaluate requirements and advise clients on computer strategy; to manage projects from design to implementation. Specific experience of manufacturing industry would be useful.
- Project Consultants:** to be responsible for the design of advanced systems and to manage programming teams writing those systems. Specific DBMS and TP Monitor experience is required.
- Senior Programmers:** with some supervisory experience and in-depth programming experience of on-line systems.
- Programmers:** with at least one year's experience of a commercial programming language.

As one of the largest computer services companies in the country Hoskyns offers a wide choice of career opportunities and locations - we have offices in most parts of the UK and our International Division has worked in most of the European, Middle Eastern, and Commonwealth countries.

Conditions of service are commensurate with what you would expect from a major company in this field - relocation expenses would be paid where appropriate. Although our current offices are in the centre of Manchester we expect to move to Sale in the near future as part of our expansion plan.

If you would be interested in discussing the opportunities with us we would like to hear from you. Write with full career and salary details to:

J. M. Burns
John Hoskyns and Company Limited, Byrom House, Quay Street, Manchester M3 3JD
or telephone: 061-834 4235.

hoskyns

A systems company with over 500 professional staff,
13 computer centres and 14 years of continuous growth

**An unusually interesting position for a person with
an analytical background**

INTERNATIONAL OPERATIONS PLANNING

Salary: Circa £5,600 plus mortgage subsidy

Home base: Very attractive part of Southern England

Our client is establishing a number of international computer sites. They now want to meet someone who can help plan the local computer environment for these sites. By this we mean the physical environment of the computer room, the staffing requirements and also the implication of future business expansion on these two aspects.

The selected applicant must be capable of assisting local staff at the international sites and advising their management. Therefore, a preparedness to get on with people of diverse nationalities is very important. We are looking for someone who will have the ability to "think in the right way", by this we mean analytically, and who will have probably worked in a problem solving environment for at least two years.

The position will require some overseas travel, occasionally at short notice, and when away from the home base, the applicant will be expected to make decisions without reference to a superior. Therefore, you must have the confidence to be able to do this.

The equipment being installed is in the Burroughs B.1700/1800 range, and some knowledge of this equipment would be advantageous. However, this is not the most important aspect, more important is a genuine enthusiasm, flexibility and an ability to persuade people to do things quickly and accurately.

If the position interests you then we would like to meet you as soon as possible.

Please apply to John Goldsmith, Ref. 1648/CW.

WE ARE ALWAYS INTERESTED IN HELPING YOU WITH YOUR CAREER

Senior Systems Programmer

C.LONDON

£6,500 + Benefits

Our client, a large service organisation, is seeking a Senior Systems Programmer to assist with the generation and maintenance of the operating system, liaise with the manufacturer, advise and assist users, write and document software interfaces, provide support for computer operations and generally assist the Systems Programming Manager. An IBM 370/158 is in use.

Applicants with at least 2 years experience of IBM ASSEMBLER should be familiar with OS/VS 2, Release 1 or Release 2. Supervisory experience and some knowledge of TP, HASP, Data Base Management Systems, SYSGEN work or VSPC would be an advantage.

If you have the necessary qualifications and would like to be considered for this position, please call in or phone for an Application Form. Ames Personnel, Suite 14, Dryden Chambers, 119 Oxford Street, London W1R 1PA.

AMES PERSONNEL 01-434 1106

Software salesmen + Technical support staff

Due to our continued expansion in the fastest growing area in DP, we need a further SOFTWARE SALESMAN to cover the south of England.

The successful applicant will know the IBM 360/370 market place, and will have initiative in an area that will provide good rewards.

In addition UCC is looking for TECHNICAL SUPPORT staff to support our customers and marketing staff in maintaining some of the world's leading operating software products. These include UCC ONE (Tape Management Software) and UCC TWO (DOS under OS), which have consistently been voted into the Datapro Roll of Honour. Experience required from our technical staff is a good knowledge of Assembler and preferably experience as a systems programmer.

These vacancies are based in the Norbury office, and if you are interested please write or phone David McBrean.

UCC UNIVERSITY COMPUTING COMPANY
Software Products International

University Computing Company (Great Britain) Limited
125B London Road, Norbury London SW16 4XN. Tel: 01-679 1766.

Norfolk Chief Programmer

c. £6000

We are a privately-owned, leading provincial newspaper group. Our modern head office is situated in the heart of Norwich, an exceptionally pleasant forward looking City, close to the Norfolk Broads and within 30 minutes of a variety of resorts with golden beaches.

We currently use two UNIVAC 9400's with communications equipment to support our real time advertising, accounts and text processing systems.

The chief programmer we are seeking will be an experienced UNIVAC 9400 programmer, capable of managing a team of

providing technical expertise for a small team of programmers.

The successful applicant will participate in profit sharing, pension and life assurance schemes, canteen and social club facilities and will have the opportunity to influence the Company's view on future computer usage. Assistance is given with relocation expenses where applicable.

Application should be made in writing to Personnel Officer, Eastern Counties Newspapers Ltd, Prospect House, Raven Road, Norwich, NR1 1BB. Tel: 01603 2311.

IRANIAN NATIONAL BLOOD TRANSFUSION
SERVICE TEHRAN

PROJECT LEADER

(approx. £19,000 p.a. + termination bonus and car)

for implementation of mini-based interactive computer systems to support the operational functions, planning/budgeting tasks and routine administration of the Iranian National Blood Transfusion Service.

He/she will be expected to make a working contribution to the detailed design, development and implementation of the systems, to participate in the selection of project staff (expatriate and Iranian) and to play an active part in the on-the-job training of Iranian project staff. He/she will have to co-operate closely with the medical and management staff of the INBTS who are actively involved in the planning for systems automation.

Applicants should have a relevant university degree and at least ten years practical experience of systems design/implementation and programming (in more than one language, including Assembler or equivalent), using several different makes of hardware on a variety of applications. They should have managed projects and project teams successfully; in recent years they should have worked on the design and implementation of mini-based interactive system(s) in a senior capacity.

The Project Leader who will report to the Deputy Director of the INBTS, will be appointed for a minimum of 18 months at a salary of 2,500,000 Rials p.a. (which includes a housing allowance). Additional benefits include termination bonus, car provided, 5 weeks paid leave p.a. and generous relocation allowance.

Initial interviews will be held in London during the first half of July; shortlisted candidates will be asked to attend final interviews in Paris between 23rd-29th July.

Applications, with curriculum vitae, should be addressed to Box No. 1957, Computer Weekly, Dorset House, Stamford St., LONDON SE1 9LU.

Custom-Built careers grow from Custom-Built Systems

When a customer needs a system to be built to solve his unique problems then the Custom-Built Department of Centre file will be happy to supply it. The solution may involve our 6 M byte triple 370/155 installation or alternatively could involve PDP11, Datapoint or Intel 8080 equipment.

Work is interesting and varied. Recent projects include a large database system, unit trust administration, retail sales and stock control, and real-time consumer credit sanctioning. We now need:

Senior Systems Analysts

Sell motivated, with broad commercial experience and able to control projects. Salary to £6,500 (subject to review). Ref. 1850/1.

Senior Programmers

At least four years' experience with IBM 370 and COBOL knowledge. Structured programming and database techniques are used and if necessary training will be given in these. Salary to £5,500. (Subject to review). Ref. 1850/2.

Mini-Computer Programmers

Programmers with PDP11 experience are needed to work on a variety of projects. There is the opportunity to work with other mini and micro computers and appropriate training will be given. Salary to £5,500. (Subject to review). Ref. 1850/3.

A range of benefits including house mortgage, pension scheme, free bank accounts, personal loans, etc., available after relevant qualifying periods. Please telephone or write to Mike Sande, quoting the appropriate reference number.

University of Birmingham

COMPUTER CENTRE

Adviser for Interactive Computing

The Centre's provision of a wide range of local and remote computing facilities is now being extended by the installation of a large, dedicated interactive system for both teaching and research.

A new post of Computer Officer, tenable for two years from 1st October, 1979, has been created in the User Services Group to develop the use within the University of:

Computer Aided Instruction and Computer Aided Learning techniques. Applications are invited from graduates with computing experience, especially in the areas of simulation and modelling techniques. A higher degree is desirable, but clear evidence of previous work successfully completed is equally important.

Starting salary, according to age, qualifications and experience, will be on the scale:

£3,189-£6,282-£8,178 (under review).

Further information from the Assistant Registrar, Science and Engineering, University of Birmingham, P.O. Box 363, Birmingham B15 2TT, to whom applications (three copies) including full curriculum vitae and naming three referees, should be sent by 3rd July, 1978. Please quote ref. CW24.

THE OPEN UNIVERSITY Student Computing Service

ASSISTANT AREA COMPUTING SERVICE MANAGER

Applications are invited for the above post, at the university headquarters at Walton Hall, Milton Keynes. The Student Computing Service maintains a large national time-sharing network using DEC-20 and Hewlett Packard 2000 computer systems which provide a practical computing service to 30,000 students via remote terminals. Most of the systems and programming development work associated with student studies is carried out at Walton.

The successful applicant will have a good background in computing, preferably with experience in operating systems, programming, and preferably including some contact with time-sharing communications equipment, staff management, development of procedures and liaison with users and engineers.

He/she will be responsible for the day to day operation of the installation and will assist the Area Manager in the provision and maintenance of a network of remote student terminals.

Salary, according to experience, will be within the range £3189-£8178 p.a. The University offers a holiday allowance of 30 days plus closure days at Christmas and Easter. Excellent superannuation benefits are available and a relocation grant may be made towards the cost of removal to take up the appointment.

Application forms and further particulars are available, by postcard request from: The Computing Officer (ACSM 1), The Open University, P.O. Box 78, Walton Hall, Milton Keynes, MK7 6AL, or by telephone from Milton Keynes 62404, or Milton Keynes 62668 (24 hour answering service).

Closing date for applications: 30th June, 1978.

Distributed Processing and Scientific Systems Junior Systems Analysts

(Ref. F339)
£2600-£4000 p.a.

Programmers (Ref. F320)

£2125-£3515 p.a. or £2800-£4073 p.a. (Salaries to be reviewed July 1st)

The Authority operates an ICL 2900 series computer and a network of 2000 in divisional centres. It is now proposed to extend this network by installing mini-computers in 20 or more laboratories to capture and process scientific data. The laboratories will be linked to the divisional centres which in turn are linked to the central machine via a time-sharing network. The data captured in the laboratories will be progressively refined as it proceeds to the centre of the network.

The present requirement is for energetic and intelligent persons (male or female) to join the development team engaged on this project, and preference is likely to be given to those with a scientific and/or mini-computer background. In addition to this major project there are also vacancies in the Authority's engineering computing support team, and applicants, if willing, will also be considered for placement in that area.

Further details and application forms are obtainable from the Regional Personnel Manager, Severn Trent Water Authority, Abberley House, 2287, Coventry Road, Salford, Birmingham B26 2PU. Telephone: 021-249 2222. Ext. 78 or 77.

Product Management in Control Dataset Ltd.

Control Dataset is a joint venture between Control Data Limited and International Computers Limited. It is the United Kingdom's largest computer supplies company, manufacturing and marketing paper products, ribbons, furniture and magnetic media to a wide variety of computer users. Annual turnover is in eight figures.

In order to support its position as market leader the Company is currently seeking men or women to fill two vacant positions in its Product Management team.

PRODUCT MANAGER
An experienced Product Manager is required for this position which carries responsibility for the Company's major product lines (Magnetic tape and disc). Essential background must include at least four years in marketing consumer goods, education to degree level and preferably an understanding of the computer industry. Starting salary will be attractive and there is a bonus payable against defined objectives. A company car is provided.

ASSISTANT PRODUCT MANAGER
For this position we are seeking a candidate who has substantial theoretical training (perhaps through studies for an MBA) as well as practical experience in systems analysis or computer support activities. The successful candidate will be responsible for a defined sector of our product range, initially under close supervision, and will receive necessary additional training. There is a clear opportunity for personal development in the marketing-oriented organisation. Starting salary for the position will be according to qualifications and experience.

Both these posts are based in Letchworth (allocation to Stevenage early in 1979), and relocation assistance will be provided where appropriate. Other benefits are those you would expect of a major employer in the computer industry.

Please write, giving brief personal career details, to:
Mr. D. Firth-Clark
Personnel Manager
Control Dataset Limited
Ames House, Broadways
Letchworth, Herts SG8 3BX

QUEEN ELIZABETH MEDICAL CENTRE BIRMINGHAM

SOFTWARE PROGRAMMERS

FOR REAL-TIME PROJECT
Salary: £24,400

We are looking for programmers with more than 1 year's software experience to join our software development team. We use Univac hardware with in-house transaction and database software for our Real-time Patient Care System.

Pleasant working conditions and flexible scheme. For further information and application form write to: Mr. D. Wilson, Systems Programming Manager, or Mrs. J. Thomas, Administrative Services Manager, Queen Elizabeth Medical Centre, Edgbaston, Birmingham B15 2TH. 021-472 1372 ext. 280.

UNITED KINGDOM

MANCHESTER BASED (HEADQUARTERS IN BOSTON USA)

TWO OUTSTANDING OPPORTUNITIES FOR SYSTEMS ENGINEERS IN THE COMPUTER GRAPHICS INDUSTRY

SALARY CIRCA £7,000 PLUS COMPANY CAR

Applicon is a world leader in Computer Graphics, one of the most exciting and fastest growing areas in today's electronics industry. They supply the most advanced and cost effective graphic systems available and users include many of the world's leading companies.

In the UK Applicon's potential is impressive and this has led to the recruitment for 2 Systems Engineers of the highest quality. One with STRONG ELECTRONICS EXPERIENCE IN PCB DESIGN and the second with a CAO/CAM/3D ORIENTATION.

QUALIFICATIONS:

1. Strong personal motivation and enthusiasm, and communication skills.
2. PCB candidates will have quality experience in this field and a high standard of academic attainment.
3. Candidates for the CAO/CAM/3D position will be experienced in this field, may well be Ph.Ds and have a background including NC and FINITE ELEMENT ANALYSIS.
4. For both positions mini computer and Fortran experience is important.

Please send your career details direct to OPSC Group, alternatively telephone for a confidential discussion.

OPSC GROUP LIMITED, CROWN HOUSE, MORDEN, SURREY SM4 5EU, Tel: No: 01-540 8311.

Real Time Systems & Software Designers

to meet the needs of
the 1980s
in computer-controlled
communications

At Boston, Nottingham, Plessey is building a team to design a new range of processor controlled switching and office automation systems offering a wide range of fascinating applications. The Company has a monthly export record and aims to increase its influence in world telecommunications markets.

Real Time Systems and Software Designers are needed to come into this growth activity and to enjoy

the scope for career progress and job satisfaction. You would be actively involved in contributing to system philosophy and would undertake the design and implementation of digital systems. Candidates should have experience of real time programming and design or micro-computer hardware experience.

Salaries, up to £6,500, will be negotiated in line with experience and qualifications. The Company will assist with relocation costs and may be able to help in obtaining a mortgage in this low cost housing area. Applications are invited from men and women.

Please ring or write for details:
David Harris, PIR, Lamberth
House East, Clarendon Street,
Nottingham.
Tel: Nottingham (0602) 49781.

COMPUTER MAINTENANCE ENGINEER

The Central Electricity Generating Board is looking for a suitable person to join the staff at HEYHAM POWER STATION which is under construction to the south of Morecambe Bay, Lancashire.

A computer maintenance engineer is required for the power station control equipment. This equipment comprises 3 Turbomatch 500 computers on process control data main frame and recording and 2 off-line PDP 11 based data processors.

This post is for a day work engineer to provide back-up service to a team of shift operators on this equipment.

Applicants should possess suitable qualifications and must have gained experience of digital computer based control systems. The ability to read simple diagnostic maintenance programmes will be necessary although training can be provided.

Salary will be within one of the following ranges depending on qualifications and experience: £5485-£7221 p.a. or £4181-£4175 p.a.

Applications in writing, from either sex, giving details of age, experience, qualifications, etc. to the Personnel Manager, C.E.G.B., Europe House, Bird Hill Lane, Chadda Heath, Stockport, Cheshire SK7 0XA to arrive no later than 3 July, 1978. Please quote vacancy number 614/CW.

SENIOR PROGRAMMER

(Ref. M.18) Salary up to £5,600.
If you are an experienced programmer ready to take responsibility for others, why not come and join us at Lambeth?

In addition to managing a team of programmers you will also assist in the design of systems and the preparation of program specifications. Computing at Lambeth is currently based on twin ICL 1900's supporting a variety of batch and on-line systems.

The computer centre is located close to tube and main-line stations as well as major bus routes. Other benefits include flexible, subsidised canteen, generous holidays and assistance with relocation expenses in some cases.

Further information or application form obtainable from the Personnel Officer, Directorate of Management Services, London Borough of Lambeth, Lambeth House, Brixton, S.W.2, or telephone 01-274 7722. Ext. 696.

LAMBETH

ARRAY PROCESSOR SALES EXECUTIVES £15,000

FLOATING POINT SYSTEMS Array Processors are attached to minicomputers and large mainframes to provide higher speed computation and greater accuracy. This cost effective solution to large scale scientific problems has led to rapidly expanding sales in an exciting range of prestigious applications.

Specialisation: -- Summation -- Signal Processing -- Summation
-- Astrophysics -- Production Testing -- Physics
-- Image Processing -- Medical Processing -- Chemistry

WE REQUIRE: -- Proven record of computer sales -- Experience of Scientific Markets -- Programming knowledge (at least FORTRAN).

WE OFFER: -- An outstanding career -- A high basic salary plus commission and car -- Located at Reading -- Sales in UK, Holland and Scandinavia

SUPPORT ANALYSTS

is needed to complement our highly professional team. This will involve both pre and post sales effort and will require understanding of problems within all our application areas. Experience of matrix computing methods and signal processing will be an advantage.

Please write in confidence to: Steve Markham, Floating Point Systems S.A. Ltd., 42 Queens Road, Reading, Berks. RG3 4JH (0734) 50181

Ludbrook

RECRUITMENT- COMPUTER PERSONNEL

This position will be of particular interest to a dynamic young man or woman with a flair for sales and administration in a very fast moving environment.

The person appointed will work directly with our clients and co-ordinate all advertising and recruitment drives.

Salary and conditions will be commensurate with the importance we attach to this position. Please apply in writing with full Curriculum Vitae to:

Mr. G. W. Ludbrook

Electronic Engineers/Technicians

Your experience pays off in the Computer industry

Data General is the world's third largest producer of small computers with more than 50,000 installations in 53 countries.

We would like to hear from Electronic Engineers/Technicians with ONC, C&G qualifications, or relevant Forces experience. Depending on your experience, you can expect to be offered a starting salary of about £4,000, a company car and, if based in London, a weighting allowance of £500 p.a. You will be offered a career with potential for much higher earnings as your computer servicing experience develops. Our fully trained Engineers can earn £6,500 inc. overtime, on-call etc. Don't miss this chance to get into the highly lucrative computer industry.

Experienced Computer Service Engineers

We also have a few vacancies for experienced Computer Service Engineers in Birmingham, Glasgow, Manchester, London and the Home Counties. For all the above vacancies please write or phone Janet Field in the address below -- reversing the charges if you wish.

Data General

Data General Limited, Watway House, 320 Watway Road East, Greenford, Middlesex UB6 9BH. Tel: 01-578 9231

Computer Programmer

Golden Wonder Limited, a member of the Imperial Foods Group, are now seeking a Computer Programmer to fill a vacancy created by internal promotion.

The present configuration is on ICL 64K/1902T with disc, tapes and VDUs. This will shortly be upgraded to 64K with 7502 systems supporting further VDUs. Applicants should have COBOL programming experience.

We also make extensive use of the FILETAB language and develop on-line systems using applications manager software. The successful applicant will play an active role in our development programme using all three of these languages. Training will be given where necessary.

Our salaries are competitive and we offer 22 days annual holiday plus 3 statutory days, and a subsidised dining room in our modern offices situated in the centre of Market Harborough.

Please telephone Market Harborough 4771 or write for an application form to: Mrs. J. M. Freer, Employment Officer, Golden Wonder Limited, Watway House, Watway Road, Market Harborough, Leicestershire.

B

LEEDS

PROJECT LEADERS

£4,500-£6,000 + Profit Share
Three years' commercial experience with a sound background of ASSEMBLER and high level languages. To be involved in full development from Systems Analysis through programming to implementation.

PROGRAMMERS

£3,500-£5,000 + Profit Share
COBOL experience and ASSEMBLER an advantage. Software house environment. Rapid progression to Project Leader level expected.

SYSTEMS ANALYST

£5,500
Level 68/20. Batch/On-line. Must have 3/4 years' experience. Excellent prospects in fast moving bureau environment. Bureau experience desirable but not essential.

PROGRAMMERS

£5,000
ASSEMBLER preferably on mini but IBM considered. Excellent opportunities to expand with a fast growing software house. Must have a commercial applications background.

CIVIL SERVICE**

SENIOR ANALYST/ PROGRAMMER

The Company is a leading manufacturer of electrical appliances with 1200 employees and two factory locations. It is a registered company and a wide range of manufacturing processes, control of materials and stock involves computer systems, which are likely to be further extended to improve production efficiency.

The person appointed will play a key role in monitoring and extending computer systems. He or she will be in charge of an IBM Systems 3 Model 8 computer installation, and will be involved in varied commercial applications and in preparing a new order entry/invoice system and a much more extensive payroll. Assisted by two trainees and the punch room staff, the Senior Analyst will be responsible for RPG programming and IPICS for the two factories.

Where necessary, training will supplement experience, and prospects of promotion are good. The salary will be in the range £4000-£5000, according to age and experience.

Benefits of working for the Company include, subsidised restaurant, 4 weeks holidays, pension scheme, woodland location with on-site sports and social facilities and BUPA membership.

Write with full details of experience and salary required, or visit/phone for an application form to:

OCC computer personnel limited

*The door
to
opportunity...*

We at OCC have been recruitment consultants to the computer industry at home and abroad for over seven years, and continued growth means we need to recruit two additional consultants. You need self-motivation, the ability to deal convincingly with candidates and clients at all levels, and the ability to express yourself well in speech and writing. Your past experience is less important and could have been in systems support, consultancy or personnel.

**Senior Personnel Consultant
to £7,000**

**Personnel Consultant
to £5,000**

★ Variety of work
★ Personal development

★ Professional environment
★ Excellent conditions

Working as a consultant for OCC offers you a variety of work and exposure to a wide variety of hardware, software and applications. You will meet a lot of people, both as clients and candidates, and you will visit client sites to discuss current requirements. The work provides considerable scope for personal development.

OCC have been at the forefront of developing a set of standards for the recruitment companies through the Computing Services Association. You will therefore join a highly professional team. You will work in a relaxed and friendly environment, although high standards of work are expected. A training programme tailored to your particular needs, will be drawn up when you join. Conditions of employment include pension and sick schemes, regular appraisals and salary reviews, etc.

If you are interested in the opportunities we offer, please contact me, Neville John, to discuss matters further. Day telephone: 01-242 9356. Evenings or weekends: 01-242 9356. Alternatively, to find out more about us and meet some of our consultants, informally, come to our offices at the times shown opposite.

SCANDINAVIAN BANK

EXPERIENCED ANALYSTS AND PROGRAMMERS

Due to the continued expansion of the Bank and its OP activities the following additional staff are required:

SYSTEMS ANALYSTS With at least two years' experience in a banking environment. Experience of on-line systems an added advantage.

COBOL PROGRAMMERS With two years' programming experience on an IBM 370 under DOS/VS and POWER/VS. Knowledge of Assembler and/or CICS/VS an added advantage.

The Bank is currently developing a sophisticated on-line real time system and the new entrants will form part of the development team.

Attractive salaries commensurate with experience. Fringe benefits include low interest mortgage scheme, non-contributory pension scheme, luncheon vouchers and season ticket.

Apply in writing quoting experience to:

DATA PROCESSING MANAGER, SCANDINAVIAN BANK LIMITED
18 LEADENHALL STREET, LONDON EC3A 1BH
TELEPHONE: 01-749 0465

Computer Programmers

Lucas World Service require programmers, with at least two years COBOL or ASSEMBLER experience, to work in the centre of Birmingham. The successful applicants would be required to work on Order Processing and ancillary systems currently running in real-time on two UNIVAC 418 111 but to be replaced by a large distributed network in two years. Experience with mini computers would be an advantage but not essential. Full details of qualifications and experience should be forwarded to: Personnel Manager, Lucas Service UK Limited, Plume Street, Aston, Birmingham B6 7RS.

International consultancy — Opportunity for overseas travel — Turnkey Mini and Mainframe systems.

Already acknowledged as one of the market leaders in the area of Financial Systems development, our client, a major UK based International Consultancy Group, now wishes to appoint a number of additional personnel for new projects both in the UK and overseas. The Finance Division is primarily concerned with the development and implementation of Business and Financial Systems, many of which involve Real Time, Communications or Network Processing.

Systems Consultants £6,000 - £8,500

Systems Consultants should have at least 4 years' Systems experience, and a knowledge of programming. Specific experience should include some involvement in one of the areas listed above. Candidates should have either Project Leader experience or potential to develop into this role in due course.

Software Consultants £6,000 - £8,500

Software Consultants should have experience of Real Time mini computer software in any application area. The essential requirement is the ability to design/enhance and implement complex systems software.

Programming Consultants £4,500 - £7,000

Programming Consultants should have a minimum of 2 years' programming experience. Mini experience is of particular interest as is experience of Financial or Accounting systems. For some projects, IBM PL1/CICS would also be useful.

To apply for these positions, or for further information, please contact
Roger Allington on 01-242 9356 (day) or Berkhamsted (04427) 2299
(evenings/weekends). Ref: 310F/CW/RA.

SCIENCE RESEARCH COUNCIL APPLETON LABORATORY REQUIRES A SCIENTIFIC OFFICER

To work at the Astrophysics Research Division at Culham on a project to study the X-ray Spectra from Solar Flares. The successful candidate will develop software to run on a PDP 11 Computer System for the analysis of data from a satellite that will be launched in October 1979 and should be prepared to spend periods abroad at the Satellite Operations Centre near Washington, D.C., U.S.A.

Applicants for this post should have a degree or equivalent qualification in Physics, Mathematics or Computer Science and some experience of FORTRAN programming. A knowledge of Mini-Computers would be an additional advantage. Salary: on the scale £2,639 p.a. to £4,415 p.a., the exact step depending on qualifications and experience.

Non-contributory pension scheme

Please write for an application form to: The Secretary, Science Research Council, Appleton Laboratory, Ditchen Park, Slough, SL3 9JX, or Telephone 0494 41222. Closing date: July 6, 1978.

LIVERPOOL POLYTECHNIC DEPARTMENT OF MATHEMATICS PRINCIPLE LECTURER COMPUTER SERVICES

Applicants should have a sound knowledge and relevant experience of computer services development and management in the educational context. It is anticipated that this post will eventually be incorporated in a separate Computer Services Unit, the post holder will be responsible for examining needs and making recommendations regarding future provision. Salary scale: £7047-£8844 p.a. Application forms and further particulars are available from the Personnel Office, Liverpool Polytechnic, Richmond House, 1, Bedford Place, Liverpool L3 9ET. Tel: 051-227-8881. Ex. 55.

UNIVERSITY OF SURREY COMPUTING UNIT SYSTEMS PROGRAMMER/ ANALYST

Uvely programmer/analyst needed to develop and maintain a small system involved with the design and implementation of systems using machine code, mini and microcomputers. Projects may include packet switched networks and multiprocessor and distributed processor configurations. We currently operate two ICL 1900 computers; replacement of the 1900 equipment is expected in the near future. The salary scale will be up to £17,724 per annum with generous fringe benefits. Applications should be sent to the Personnel Office, University of Surrey, Guildford GU2 7XH. Tel: 0424 443311. Ex. 222. Closing date: July 1, 1978.

PROGRAMMERS & ANALYST, PROGRAMMERS who want to move to SYSTEMS/ ANALYSIS

Starting salary up to £5600, around three years mainframe programming experience required. Computer Science graduates would be considered at an appropriately lower salary. (Ref: 686W)

COBOL PROGRAMMERS who want to learn DATABASE & TP TECHNIQUES

Starting salary up to £5600, at least two years programming experience required, including COBOL. (Ref: 686W)

PROGRAMMERS who want to move to COBOL

Starting salary up to £5600, at least two years' mainframe experience required (no scientific), any language, any hardware. (Ref: 686W)

We are recruiting for clients who have a large installation in the West End of London, with plenty of development work, using database and TP techniques. Good training and career prospects, excellent working conditions (new offices). Please ring us in confidence, quoting the appropriate reference, or leave a message on our answering machine after hours.

62-63 Margaret Street
London W1N 7FF

COMPUTER OPERATORS & TRAINEES

Cardiff up to £4000

In readiness for our move to 24-hour, 3-shift operating, we need to recruit a number of experienced and trained operators for our computer centre. The system comprises dual B3501 and B3771 processors with a combined memory of 550 KB and sharing a total disk capacity of 900MB. There will be involvement in a wide range of both routine and special applications including a Real Time Stress System.

Applicants for the posts of operator should ideally have a minimum of 18 months' relevant operating experience on a large commercial installation.

We also have vacancies for Trainee Operators who are at least 18 years of age and will have either limited experience or are interested in starting a career within computing. Salary for this position will be from £2550 depending on previous experience.

Career progression, depending on the individual's ability, is available through Operations Development, Programming and Management.

For further information and an application form please write to: Dave Prestwich, Computer Operations Officer, Wales Gas, Snelling House, Bute Terrace, Cardiff, nr ring Cardiff 33131, extension 3278.

**WALES GAS
NWY CYMRU**

oxford polytechnic

Computer Centre
Chief Programmer
(Salary on PO1 scale up to £6000)
An experienced programmer is required to take charge of the Polytechnic team of three programmers. Applicants should hold a degree or equivalent, and have good experience of COBOL II and BASIC. The Polytechnic has an excellent staff which is currently being expanded.
Further particulars and application forms may be obtained from the Admissions Office, Polytechnic, Oxford OX1 1JF, to whom they should be returned as soon as possible.

Computer Scientist for Petro-Chemical Research

Due to the increasing number and complexity of projects both in hand and imminent, our Research Centre at Abingdon - which specialises in fuels, lubricants, and additives - needs a technically-minded and creative man or woman to join a small team providing an efficient and flexible computing service for our scientists and technicians.

Using the Centre's multi-terminal interactive PDP 11 System linked to the worldwide Exxon IBM 370 network, this team is responsible for all aspects of computer application and development arising from projects under investigation, including the use of mini computers in data logging and real-time applications.

With a degree in Maths, Statistics, Chemistry, Electronics, Chemical Engineering, or an associated discipline, you must be able to appreciate the scientific problems encountered in our research - logically thinking them through to provide cost-effective computer solutions.

At least one or two years' practical experience with systems or software is essential - preferably in a scientific environment. A statistical background would also be an advantage.

A competitive salary will be supplemented by a full range of benefits, and generous relocation assistance to this attractive rural area - just an hour away from London and only 20 minutes from Oxford - will be provided where appropriate.

Please write with full details, to: D. P. Sweeney Employee Relations Service, Esso Research Centre, Abingdon, Oxon OX13 6AE. Or phone him on: 0235 21600.

Esso RESEARCH

Programmers Opportunities to move into ADVANCED SOFTWARE DEVELOPMENT

A number of opportunities exist to join the young, enthusiastic and professional software development team at Membrain, using advanced structural development techniques to design and implement software which will be the most advanced ATE software in Europe.

The team is now entering an exciting stage in the development of new software for the recently launched MB7700 range of microprocessor controlled ATE including:

- * High level language compilers
- * Automatic program generation
- * Advanced fault diagnosis algorithms
- * Sophisticated program debug packages

That's just for 1978!

1979 will break further new ground with the introduction of more new products.

Interested? Then read on!

While a knowledge of automatic test equipment would be advantageous, the minimum requirements are education to

degree level, preferably in computing science or electronics, and at least one year's experience, ideally in a scientific or technical environment with familiarity with languages such as Algol or C or Fortran.

We offer excellent starting salaries depending on experience, and our other benefits include a profit-sharing bonus scheme.

We are located in a convenient part of Dorset, close to Bournemouth and the coast, and where appropriate, we provide generous assistance in enabling you to relocate to this area.

For immediate consideration send details of your qualifications, experience and salary expectations to:

SOCIAL SCIENCE GRADUATES TEMPORARY APPOINTMENTS

Applications are invited from social science graduates for a temporary Scientific Officer post with the Social Science Research Council. Initially the appointment will be for up to 6 months with the possibility of renewal for a further six months and the successful candidate will work as part of a team providing the Secretariat for the Computing Committee, as well as the Management and Industrial Relations Committee. Applicants should normally be under 27 and have a good honours degree in a relevant subject. Training, research in, or experience of social science computing is desirable, as also would be experience in administration. Salary scale £3044-£4880 p.a. (including inner London weighting and pay supplement). Salary may be above the minimum depending on class of degree and experience. Application forms and further details may be obtained from: Mrs. Vera Ashton, Social Science Research Council, 4 Temple Avenue, London EC4Y 9BD. Tel: 01-352 2212 ext. 110. Ref: 180/CW. Closing date for applications: 30th June, 1978.

Our Client's leading position in the European Time Sharing Market is based upon its success in offering a powerful, highly-reliable Communications Service. Following increased sales they now wish to augment their Network Trouble-shooting team.

The successful candidate will have:

- * Experience of network-control techniques, probably having gained this in a senior position in Operations.
- * An appreciation of telecommunications hardware and software.

The challenge will be to act as a technical trouble-shooter/consultant in pre- and post-sales situations, as well as assisting in the development of new network facilities. Career prospects and continuous training, in an environment of keen professionalism, are impressive, and reflect the vast technical resources and attitude of this International Corporation.

Opportunities in Computer Programming

A far-reaching programme of work and computer enhancement has created opportunities at our head office in Surrey for people seeking career progression and job satisfaction, tackling the challenging problems arising from our development plans. The present installation consists of a large ICL 1904A configuration which will be replaced by dual ICL 2980's in January 1979, with future emphasis being placed especially on database and communications personnel.

The people we need should have a capacity for original and logical thought and the initiative to work with minimal supervision. We give comprehensive training and recognise individual potential for development on to systems analysis work. Programmers are encouraged to use their ability and experience to contribute as much as they can to the design and planning stages. Promotion is based entirely on merit and the senior positions in the department are almost invariably filled from within.

Candidates should either have relevant programming experience or be suitable for a post as trainee programmers, i.e. of degree standard or with a successful career background.

An attractive starting salary is offered which is dependent upon age, qualifications and experience.

Excellent conditions of employment include contributory pension fund, free life assurance and all the benefits of working for a large organisation. We operate a Flextime system and have an excellent sports and social club.

Please write or telephone for an application form from

MMB The Personnel Office
Milk Marketing Board
Thames Office
Surrey KT7 0EL
Tel. 01-398 4101.

At its London headquarters, the Authority operates two IBM 370/148 Computers connected to a large (160 terminal) teleprocessing network covering the principal centres of population in the Region.

Interesting developments in this network are in hand involving the evaluation of IBM's Series 1 and similar equipment.

The software environment is VM with OS/VS, OS/VS1 and CMS. The teleprocessing monitor is SHADOOW with TP programs written in IBM Assembler. Batch work is handled almost entirely by Informatica MARK IV file management system. Applications are invited from suitably qualified persons for the position of:

Project Leader Program Development £6,834 - £7,302 PER ANNUM (Currently under review)

The successful candidate will manage a team of system analysts and programmers in the day-to-day maintenance and production of new suites of programs to installation standards. Four years' experience of programming and system analysis, two in a senior role, are a minimum requirement. Knowledge of Informatica MARK IV and IBM's Basic Assembler Language would be an advantage, although more weight will be given to evidence of leadership and organising ability.

35 hour week.
Generous holidays.
Pension Scheme — Interchange arrangements.
Staff restaurant.

Applications, quoting reference CW and giving full particulars of age, educational qualifications and previous experience should be sent not later than 14 days from publication to: Laurence O. Wild, C.Eng., F.I.C.E., F.I. Mach.E., F.I.W.E.S., Division Manager, Room 650, Thames Water Authority, Metropolitan Water Division, 173 Rosebery Avenue, London, E.C.1.

THE POST IS OPEN TO MALE AND FEMALE APPLICANTS.

Thames Water

CITY OF MANCHESTER Treasurer's Department COBOL PROGRAMMERS AND SYSTEMS ANALYSTS

£3,388-£5,214 p.a. (including increments)
(Open to all interested persons from 1.7.1978)

Based in the City Treasurer's Computer Section which operates a large ICL System 4/72.

Applicants should have experience in systems analysis or programming using COBOL or another high level programming language.

The successful applicant will be responsible for detailed systems work, program design, project documentation, program development and testing. The work is varied and interesting. There are advancement opportunities, with moves to be developed in the future.

Conditions of employment are good and follow normal local authority practice. A 35-hour week with flexible hours is in operation. The salary is in accordance with a salary scale Grade 39/4 £3,388-£5,214 plus a minimum of £6 a week and a further supplement of 8% with a maximum of £6 a week and a minimum of £2.50 a week. Starting salary will be according to age, experience and qualifications.

Applications giving details of age, education and qualifications should be sent to: Mr. J. H. Smith, City Treasurer, City of Manchester, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82, 83, 84, 85, 86, 87, 88, 89, 90, 91, 92, 93, 94, 95, 96, 97, 98, 99, 100.

Corporation of London
Guildhall, E.C.2

PROGRAMMER £4183-£5954 (Salary review July 1978)

The Corporation of London is seeking a Programmer to join a team of five other programmers in its installation which is responsible for a wide range of financial and non-financial systems. For example, Integrated Accounting System, Rate and Rent Collecting System, Stores, School Fees, Payrolls, etc., together with Traffic Tickets, Register of Electors and Examination System, etc.

The successful candidate should have 18 months of COBOL or PLAN programming experience and will be given in-house training and further external training as necessary. The general environment is such that a broad base of expertise can be obtained from the installation. Both COBOL and PLAN languages are used.

The salaries are inclusive of a salary supplement of £312, special supplement £477 and the 5% Phase II salary adjustment, and will be commensurate with experience. Annual increments are then granted up to the scale limits. Other benefits include generous holidays, superannuation scheme, season ticket advance, subsidised staff restaurant and resettlement advances in approved cases.

The installation comprises an ICL 1902S 48K store processor, 3E0S, 4 tape decks, etc. and GEORGE 2 operating system in use.

Applications with details of working experience and Academic passes, or enquiries, are invited and should be addressed to:

Computer Services Manager
Guildhall, London, EC2P 2EJ

Line Controller

£24500
+ Preferential Mortgage Facilities
Bexleyheath N.W. Kent

The Woolwich, which is one of the country's largest building societies is enhancing its teleprocessing system to support its branches throughout the U.K.

The Society wishes to recruit a Line Controller who will assist in the operational running of what will ultimately be a large IBM based data communications network.

Candidates should preferably be educated to 'A' level, although good 'O' or CSE levels will be acceptable. Previous experience of controlling a data communications network is essential.

A comprehensive remuneration package accompanies this position including a preferential mortgage facility and excellent pension scheme. Relocation expenses may be paid where necessary.

Please ring Mr A. Hughes — Network Controller, on Crayford 528232 Ext 503 (day) or 01-853 8181 evenings/weekends. Alternatively please write to the above for further details or an application form at Woolwich Equitable Building Society, 30 Edith Road, Bexleyheath, Kent, DA7 6BP.

WOOLWICH
EQUITABLE BUILDING SOCIETY

Computer Programmer Research

This appointment offers the chance to join a new pharmaceutical research organisation which is part of one of the world's largest chemical companies. We are seeking to appoint an Analyst Programmer within the Computing Services Group to develop and maintain a variety of software to meet all the data processing and statistical needs for a multidisciplinary group of life-scientists.

The central hardware consists of a Hewlett Packard 21 MX(E) computer with the 50 MB HP 7920 disc linked to a HP 2100 computer and HP 7900 disc. Appropriate peripherals are mostly distributed through the laboratories in accord with our policy of on-line capture and central processing of all data. The scientific disciplines to be serviced include synthetic chemistry, drug analysis, pharmacokinetics, drug metabolism, pharmacy, immunology and information services. A fully equipped electronics laboratory supports this function by the provision of micro-processor based interfaces and other devices as required.

The successful candidate, male or female, will therefore have a minimum of five years experience in a scientific and/or statistical environment and be fully conversant with Fortran and Basic languages. A formal knowledge of statistics would be an added advantage.

A first class salary will be paid, conditions of employment are excellent and our benefits package is of the standard expected from a major international company.

Please write or telephone for an application form to:-

Mrs. M. C. Hannay, Personnel Services Manager, Hoechst UK Limited, Walton Manor, Walton, Milton Keynes, Bucks. (Telephone Pinahem 5066)

Hoechst

DECISIONS, DECISIONS.

Three great places to work, and plenty of work to get your teeth into. At Westinghouse we are at the forefront of innovative technology in the use of computers for railway systems, mining, and process controls. Our order books are growing and we need ambitious (and we mean ambitious) software staff to work on a variety of projects involving mini and micro computers, real time process control and monitoring, CAD linked support systems etc. We've got a wide range of machines: HP NOVA, DEC, and languages: CORAL 66, RPL 2, ASSEMBLER, FORTRAN etc.

We're currently looking for:

Project Leaders
Analyst/Programmers
Programmers
Senior Systems Analysis
Systems Analysts

The jobs are based in Chippengham, Bracknell and Wokingham. You make the decision where you want to work — in any place you'll find the work challenging and absorbing.

If you're really good at problem solving and want to gain more experience in a company known worldwide for its innovations in modern systems then Westinghouse is the company for you.

Write today to: P.A. Murley, Company Personnel Officer, Westinghouse Brake and Signal Co. Ltd., FREEPOST, Chippengham, Wilts. Telephone Chippengham (0249) 4141

14 St. Vincent Place Glasgow G1 2EU

Computer Systems Management

£5,500-£6,500

Outgrow your present job? Prospects looking bleak? If you are seeking professional challenge and career development in a progressive, forward-thinking company then your next move should be to Hilti.

We are part of an international marketing organisation and in the UK we're number one in supplying an advanced range of cartridge tools, fastening systems, and drilling machines to the construction industry. Sophisticated management services play an important part in keeping us out in front of the field and we now wish to appoint a Systems Manager, male or female, to strengthen the data processing team.

Age is not critical, but you will need solid experience of COBOL and systems analysis coupled with a creative thinking approach and a flair for communication. For an analyst or team leader (preferably having managed at least one major project) this is a first-class opportunity to gain broader experience of project control and men management.

Ring Graham Allington, Personnel Training Officer, on 061-872 5010 or write to him at Hilti (GB) Limited, Hilti House, Chester Road, Manchester M18 0GW.

(£2,963-£3,773 per annum)

To work in Borough Treasurer's Department for ICL 2904. Consideration will be given to housing accommodation and relocation expenses.

Application forms and further details from Borough Treasurer, PO Box 4, Town Hall, Gosport, Hampshire (or telephone Gosport 070 77) 5442 ext 102.

SOUTH LONDON PROJECT MANAGER DMS 1100 8-10K+ BONUS — CO. CAR INTERNATIONAL TRAVEL

THIS OUTSTANDING PROJECT MANAGEMENT opportunity is available to candidates who have an intimate knowledge of UNIVAC Software, especially DMS 1100. Applicants should possess the personality capable of interfacing between technicians, THE COMPANY and their Clients.

The Project Manager, who will be the "King Pin" of this MULTI-MILLION Pound contract, will need the SKILL, DRIVE and EXPERTISE to ensure successful completion of every stage of development to Implementation.

A worldwide communications network is envisaged and the Project Manager will advise and consult with the Company's clients — WORLDWIDE.

Our client's operation has grown into one of the largest and most successful computer services organisations in Europe with a multi-million pound turnover. They have a customer base in excess of 1,200 users with a network embracing the major continental cities.

Scope for further advancement is assured and the successful candidate can look forward to a stimulating and exciting future.

The salary is negotiable at between £8000 and £10000 per annum, plus bonus, company car, expenses and other excellent benefits. If appropriate our clients will assist with relocation expenses.

For further information and a confidential discussion please telephone or write to: Dean Williams, quoting reference no. CW185.

TEHRAN

DON'T BE SHORT-CHANGED CHECK YOUR PACKAGE AND YOUR CAREER

HIGH TAX FREE SALARIES PLUS FAMILY ACCOMMODATION AND OTHER SUBSTANTIAL BENEFITS

If you have Honeywell 6000 or Level 66 experience and are considering a term in Iran, then here are the best opportunities available. My client is one of the USA's leading Honeywell systems software companies and as such is able to offer the top packages for Tehran.

Consider the following:

TAX FREE SALARY

A generous tax free cash income of between \$27,920 p.a. and \$33,680 p.a. for personnel with 4-8 years' application experience. Higher salaries are available for more senior and specialised positions.

ACCOMMODATION

The company provides a separate apartment for EACH employee, the size of which varies according to the family.

The company pays for all utilities, e.g. gas, electricity, etc. with the exception of the telephone.

The company provides a good standard of furnishings for the apartment including television, washing machine, fridge/freezer, etc.

N.B. The company budgets for an average of \$17,000 to cover first year rental and furnishings for EACH apartment.

ADDITIONAL BENEFITS

- The company provides home to office transportation
- The company pays local school fees for children over 5
- The company pays Medical Insurance
- The company pays emergency home leave where necessary

HOME LEAVE

The contract is for 18 months' duration and a family trip home is paid for after 12 months.

JOB CONTENT

The company has been awarded a substantial contract due to its reputation for systems and software development based on Honeywell computers. The scope of this project ensures a high level of job satisfaction.

FUTURE CAREER PROSPECTS

The company is a well established systems software house and NOT just a bodyshop. Consequently, they view each new appointment as the start of a long term career through an initial assignment in Tehran. In addition to IRAN, future opportunities exist in the USA, UK and EUROPE.

REQUIREMENTS

PROGRAMMER/ANALYSTS

Minimum of 4 years' good experience in COBOL with applications knowledge of GCOS and JCL.

SYSTEMS PROGRAMMERS

Around 8 years' experience in DP with extensive knowledge of GCOS, GMAR, TDS and/or NPS.

DATABASE SPECIALIST

Around 8 years' experience in DP with extensive knowledge of GCOS, IDS, TDS and database design.

CREATIVE PEOPLE for a CREATIVE COMPANY

LONDON

My client currently operates a large twin IBM based bureau, specialising in systems for the advertising industry. They are soon to take delivery of an additional machine, a PDP 11/70 to cater for their expansion programme (future plans include ordering 2 more PDP 11/70s during the next 18 months). Enjoying the financial support of their parent public company, this thriving young subsidiary employs approximately 60 DP staff. It has good internal communications, with highly visible senior management, and practices a "promotion totally on merit" policy. All the current systems are to be completely re-designed and rewritten to operate in an on-line environment.

PROGRAMMER/ANALYSTS IBM DOS COBOL Up to £6000

Currently over 40 advertising agencies are serviced by these administrative and accounting systems. These systems are undergoing significant enhancements and development of new facilities towards a totally integrated package to cope with the needs of the advertising industry.

This interesting project requires self-reliant, young professionals who can enjoy a company atmosphere which encourages them to use their initiative and imagination to the full. The steady pressure of an assured, workload will enable you to develop your skills at your own pace. Planned growth will allow the company to accommodate fast developers.

REF. RW 24/2

DEC PROGRAMMERS £4000-£6000 BASIC +

The installation of a large disc based PDP 11/70 and the probability of 2 additional 11/70s in the next 18 months give rise to a heavy development schedule. Very interesting projects are to be undertaken including sophisticated on-line systems for the booking of TV time. The machine will operate under RSTS and use RMS 11/K file management system.

Excellent opportunities exist for junior programmers to join a very attractive company and for senior programmers to gain highly marketable experience developing sophisticated systems in a technically advanced environment. All positions require some exposure to DEC programming, preferably BASIC+ under RSTS.

REF. RW 24/3

RSTS SPECIALIST MANAGER £ NEG

This person will be responsible for the generation and maintenance of machine software and the development of PDP applications programs by his team. He will be highly experienced in DEC systems and possess a thorough detail level knowledge of RSTS. This is a superb opportunity for a strong technician to develop his career into management through an interesting and challenging role.

REF. RW 24/4

CALL DAVID J. HUTCHINSON ON 01-499 4501

Philips Telecommunications Computer Controlled Telephone Exchanges

The recent large order from Saudi Arabia has confirmed the position of Philips as one of the world leaders in the supply and manufacture of computer controlled telephone exchanges. This, plus enhancements and additions to the range of switching systems, coupled with the current rapid expansion of the department, has created vacancies within the U.K. part of the international development team working on these systems. The U.K. base for this effort is Malmesbury, Wiltshire where the laboratories of Philips Telecommunications and Pye TMC are located. The development effort extends into the fields of space and time division switching systems, local and trunk applications, integration of microprocessors, and network management centres.

Software Systems Designers Systems Programmers

£4,000-£7,000

Are required to work in real time telephony applications, basic operating system design and general support areas. At least two years programming experience, preferably in assembler and control systems programming, is required for the systems programming vacancies. Four or more years experience in real time of control systems software design is required for the senior positions. Experience of telecommunications would be advantageous. Some positions may entail occasional short visits to our other laboratories in Holland and Belgium.

Malmesbury is in the north west corner of Wiltshire between the Marlborough Downs and the Cotswolds, and combines a town of historic interest with all the amenities of a modern community. Motorway systems and good class roads bring it within easy reach of most major towns and cities.

These are exceptional opportunities providing scope to develop your expertise.

First class salaries and conditions of service are offered and assistance with relocation will be given where necessary.

STOP PRESS

Job Opportunities also exist in Holland

Data Processing Recruitment Consultants

PL/1 Programmers City of London

Salary: not less than 6K & up to 9K Plus Mortgage

An important international financial institution based in the City is expanding its team members and is seeking PL/1 programmers at all levels up to and beyond team leader level. Ideally, you will have around 3 years of solid PL/1 experience under O.S. and will either have on-line expertise or a desire to move into this area or Data base design through participation in our Client's training programmes.

Of particular importance is the ability to work as a member of a specialist project team under strict documentation and programming standards. A second language (COBOL or Assembler) would in addition be considered advantageous. Our client offers a 2 1/2% subsidised mortgage, personal loan scheme private health and a non-contributory pension plan. Interviews will be held in London during June.

Ref L132A

Mini Communications E.E.C.

Salaries: £9.5-15K + exceptional benefits

A prestige international Client is seeking to expand and establish new project teams working on wide and varied applications areas with emphasis on Data Communications, Message Switching and Mini Software.

Existing and new project teams require Consultants, Systems Designers, Senior Analysts, Analyst/Programmers and Programmers with direct, relevant experience in at least one of the above areas of activity. In particular extensive Mini Computer Assembler experience is essential. Successful candidates are likely to be aged between 22 and 35 with either a degree or equivalent

(Computer Science or Maths) or extensive relevant experience in lieu. You are certain to contribute valuable expertise to this prestigious group whilst expanding your own threshold of experience through working closely with other professionals at your own level. Our Client will pay full re-location expenses for you and your family and provide a generous re-settlement advance in addition to meeting the costs of temporary accommodation pending location of permanent housing. Numerous other first-class benefits go to making this every attractive opportunity.

Ref L132B

IMS Data-Base London + E.E.C.

Salary: U.K. to 9K E.E.C. to 16K

Our client one of the 'Seven Sisters' Oil Companies has asked Logistix to assist in recruiting a number of IMS Data base specialists up to project leader level and beyond. The only pre-requisite incorporated in our brief is that candidates are able to demonstrate solid IMS Data base skills. DL/1 is of course essential and if linked with PL/1, COBOL or Assembler will be of considerable interest to our Client.

This company is amongst the most advanced and sophisticated users of O.P. and should be regarded for its long-term career potential rather than as a stepping stone to greener pastures. Fringe benefits normally associated with a Major Oil Company are offered together with other rewards of a more unusual nature. These are of course in addition to well above average salaries. Interest to our Client.

Ref L132C

Banking or Financial Applications Switzerland

Salaries: £1,500 per month

We have urgent requirements for a team of four comprising two Programmers, an Analyst and a Project Leader to work in Switzerland. It is an absolute requirement that all applicants have considerable UNIVAC 484 hardware experience. Additionally, candidates with recent or current experience in a banking or other financial

environment will be of special interest. There will be an opportunity at the expiration of the project to relocate to West Germany, Spain or Scandinavia. Interviews will be held in our office by the end of June, and offers to successful personnel made within seven days thereafter.

Ref L132D

Copenhagen Communications

Salaries to £15K

We have several outstanding permanent career vacancies for Scandinavia's foremost hardware and software systems supplier. Particular machine experience is not essential but those who have a solid background in message and telecomm switching, data communications and procedures will prove invaluable to the growth pattern this Company has set for itself. However of special interest are:

- | | |

Senior Systems Analyst

LONDON c. £8,000

Our Client, a leading international engineering company has a requirement for a Senior Systems Analyst to be responsible for the implementation of their Accounting and other commercial systems. It is envisaged that this will be achieved by a combination of software house and in-house staff. The successful candidate will be responsible for both a small team of in-house programmers and for co-ordinating and monitoring the work of the software house selected.

Candidates must have a proven record of major systems development using data base and transaction processing techniques.

The in-house computer system is a newly acquired large mini installation to be used both for technical and commercial applications. The operating system supports Fortran, Cobol, RPG and Basic Language Compilers and Total Data Base Management. It provides time sharing, transaction processing, batch and remote batch processing and communication capability.

Computer Operator

A Progressive Career in Bracknell

We operate a 2030A under CSE/7000 on a 2-shift system, using disc, tape and file output from a Redifon Seachek system.

Owing to the promotion of an Operator to Programmer, we are seeking someone with at least a year's relevant Honeywell operating experience to join our team providing a service to the Clark Eaton Group - involving high glass mechanisms, glazing contractors and glass processors.

The benefits are those normally associated with a progressive company including relocation assistance where appropriate.

Find out more about them and the salary provided by calling Vincent Murphy, Personnel Manager, on Bracknell (0344) 24733 or write to him at James Clark & Eaton Limited, PO Box 19, Southern Industrial Area, Bracknell, Berkshire RG12 4UU.

Anglian Water Authority

CORPORATE PLANNING

To £5,000 (NJC Grade 6)
* Plus New Award from July 1978 *

Do you understand computers?
Can you analyse situations and make computers work for you?
Can you help us to analyse the effects and benefits of our Capital Development Programme?

The Anglian Water Authority invests £300M every 5 years in the water services in areas covering more than 100,000 sq. miles. The investment data base is currently held on a DEC PDP 11 but will be transferred to the Authority's own Honeywell 68/10.

If you have a flair for problem solving and want to join a small professional team of Corporate Planners, contact us but only if you can pull your weight.

We are looking for one good Programmer with at least 3 years at the senior level who wants to broaden his horizons. Previous experience of Corporate Planning is not necessary - but you should understand computers and how to make them do the work. Programming experience in FORTRAN is an advantage. You would experience with Honeywell 66/10 on Dec PDP 10 machine, but we are prepared to train a person with the right attitude and proven ability.

If you are interested or want to know more about this opportunity, why not call Peter Cowie, Huntingdon 248018181 Ext. 263 for information and an application form.

The closing date for applications is 22nd June, 1978 and should be sent to:
ANGLIAN WATER AUTHORITY
Diploma House, Grammar School Walk
Huntingdon, Cambs. PE18 6NL

CONTRACT RPO2 Holland
Bridge 3 months + vacancy for June/July
Must have IBM S/3 experience and at least 2 years

PROJECT LEADER N. Hinds
Good Analyst/Programmer to take over development of accounting system. Well integrated with 4 years + experience preferably IBM and 3 years prior to GEORGE2.

ANALYST/PROG Middle
General commercial experience on any mainframe equipment preferably IBM and 3 years prior to systems installation on IBM 3081/31.

Many more unadvertised positions
COMPUTER SYSTEMS & PERSONNEL

COMPUTECH 01-793 0202

Operators— Do you know George?

Bestobell Oate Systems Limited, the central systems development and bureau service of the Bestobell Group, has the following vacancies as a result of company growth and internal promotion.

Senior Computer Operator around £4,000

Responsible for the day to day operation and supervision of the computer room, to ensure the efficient operation of the computer and its ancillary equipment.
2 to 3 years operations experience required, including a reasonable knowledge of a supervisory role, covering disc and tape based systems and the relevant software. A knowledge of ICL 2903 or 1900 range operating under Executive 1/2 or George 2 is essential.

Computer Operator around £3,500

Someone with a similar background and experience to the Senior Operator but who does not need to have worked as a shift leader. A generous shift allowance is paid for a 2 shift system and a profit linked bonus scheme provides a supplement to your annual salary. You are entitled to 4 weeks annual holiday and you would work in modern premises in Slough (conveniently near the M4).

For further information please telephone Gloria Exard, on Slough 33477 or write to her at Bestobell Oate Systems Limited, Stoke House, Stoke Poges, Slough, Berkshire.

Courses in Systems Analysis 1978-79 Diploma in Systems Analysis

This is a full time one year course for graduates for whom a year's experience in business and industry is required. The course provides a comprehensive and practical grounding in systems analysis and design. It may be possible for successful students to request the Diploma to an MSc by means of a joint honours project and dissertation.

MSc in Business Systems Analysis and Design

This is a full time one year course for graduates for whom a year's experience in business and industry is required. The course provides a comprehensive and practical grounding in systems analysis and design. It may be possible for successful students to request the Diploma to an MSc by means of a joint honours project and dissertation.

Further information on both these courses is available on request from:
Admissions Secretary (Business Systems)
Room No 414
The City University Business School
75 Goswell Road, London EC1A 7BS
Tel: 01-253 4238
Ext 577 or 578
Application should be made as soon as possible but in any case not later than 30 June 1978.

TOPS GRANTS MAY BE AVAILABLE FOR
SUITABLE MSc STUDENTS

LONDON BOROUGH OF HARRINGEY
COMPREHENSIVE HOUSING
SERVICE

COMPUTER OFFICER

£5,044 to £5,300.25 per annum
plus car allowance 50%

Harringeys Comprehensive Housing Service is looking for a person who has computer systems development experience and who would now like to put it to use in a new role.

An enthusiastic, self-motivated person is required who can ensure that new or existing computer based systems are fully developed, maintained and updated.

This is a new post which is based within the Housing Service to ensure that benefits derived are services oriented. The post holder will also be required to liaise closely with an existing Borough development team, whose main role is to develop the use of a new computer, on line, computer networked OLA, which uses an IBM 370/108. The area of responsibility is to develop the Housing Service's computer system.

Application forms and further particulars are available, by post, from: The Recruitment Office (OP2), The Open University, P.O. Box 78, Walton Hall, Milton Keynes, MK7 8AL or by telephone from: Milton Keynes 83404 or 83555 (44 hours answering service).

Closing date for applications 29th June 1978.

UNIVERSITY OF ESSEX COMPUTER OFFICER

In the department of
Computer Science
Computing Service

Applications are invited for the post of Computer Officer (Grade 1A) (salary scale £3,333-£5,627 p.a. under review). Applicants should have interests in non-sequential systems; interests in the establishment and development of computer networks would be an advantage. Previous experience in three years, whilst desirable, is not essential; familiarity with the concepts of low-level programming would be useful.

The successful applicant will join an established Programming Group, which has responsibility for all aspects of software maintenance and development on the University's Service machine. This is a DEC system - 10/70, providing an extensive Timesharing and Batch service.

Applications (six copies) including a curriculum vitae and the names and addresses of two referees, should reach the Registrar (AG 7/1/CW) University of Essex, Wivenhoe Park, Colchester CO4 3SQ, from whom further particulars may be obtained by July 7th, 1978.

THE OPEN UNIVERSITY
DATA PROCESSING DIVISION

OPERATIONS PLANNING

SALARY UP TO £6,000

The Open University founded in 1969, is now a major force in higher education. It has pioneered new forms of under-graduate and post-graduate education, and its future plans include developments requiring a similar level of innovation.

Data Processing has been fundamental to the growth of the University, and is scheduled to play a major part in its continuing development.

The Operations Planning Section plays a vital role in representing Data Centre interests in the early development of systems, in facilitating the hand-over of newly developed systems for live operation, and in supporting existing systems on a continuing basis.

Applications are invited from persons with knowledge of Univac 1100 and who have some experience of programming and computer system design. Career development prospects are good and in addition we offer: good holiday provision; excellent sports and social facilities; and full location with houses available to rent or to purchase at reasonable prices. (Removal expenses are payable).

Application forms and further particulars are available, by post, from: The Recruitment Office (OP2), The Open University, P.O. Box 78, Walton Hall, Milton Keynes, MK7 8AL or by telephone from: Milton Keynes 83404 or 83555 (44 hours answering service).

Closing date for applications 29th June 1978.

CONTRACT PROGRAMMERS

Experienced in one or more of the following:
* COBOL * PL/1 * ASSEMBLER * CICS * BASIC *
* ICL * IBM * MINIE * GII * GII * XOS * OS *
Then call us now for your next contract at up to £250 p.w.

THE SALES BIT

Objections and rebuttals PART II

IN last week's column we were discussing some of the disciplines which salesmen might adopt, related to the handling of questions within the sales negotiation. The main points were: 1 - Answer all objections and questions truthfully but qualify their relevance; 2 - Don't leave questions unanswered; 3 - Always listen carefully and never interrupt.

Let's consider a couple of more basic rules:

The salesman should never argue with the buyer or tell him he is wrong. Whatever the circumstances, an unemphatic atmosphere is almost certain to result. This is true whether the buyer is actually wrong or not. Full-frontal contradictions seldom work to a salesman's advantage.

Having said that, it is often important for a salesman to make his point without upsetting the applicant. Here are some useful prefixes which can take away the initial impact of a statement which might be at odds with the buyer's own opinion.

I agree but...
I'm surprised, my impression is...
I didn't realise that...
I always thought that...
I agree that is usually the case, but in this particular instance...
I always used to think that, but recently I've discovered...
Then the salesman makes his point. It just makes the blow a little softer.

Sometimes an objection

needs to be qualified, so the salesman may know if it is real or just a diversion.

This is where the "but if" test is useful.

Objection:—We don't need computers. Our manual system gives us all the information we need.

Rebuttal:—I am sure your present system fulfils its function admirably. But if I could prove by way of existing evidence that there are many substantial financial and management control benefits which can be brought about by our special computing approach to your type of problem, it would be an asset to your company, wouldn't it?

Objection:—Your system is too expensive.

Rebuttal:—It is certainly not cheap, one tends to get what one pays for. But if I can prove that our cost/performance is at least equal to that of our competitors, will you give us the business?

You will notice an effective rebuttal converts an objection into a "trial-close", or at least attempts to gain commitment from the buyer. That is a very important point to remember, and one of the best times in a negotiation to ask for the order is on successfully overcoming an objection.

Objection:—I'd like to, but I don't feel I know you well enough.

Rebuttal:—I know we've only just met, but if I tell you the story of my life, then will you?

TRADER

How computing will affect management

From Page 23
development, the lack of precise definition of jobs and tasks can produce personal ambiguity, which many people find unacceptable.

With the insight this provides the more participative views of Anshen would seem to be favoured. If we can be sure of anything in the future it is that the rate of change we will experience will be more rapid than ever before. A move towards a more Theory Y style will be necessary to enable us to cope. Our creeping bureaucracy must change themselves. It is to be expected, therefore, that the data processing profession should be strongly Theory Y in orientation.

This, however, does not seem to be the case. If anything the definition of tasks and jobs is more precise than in most areas of management. Notwithstanding the highly desirable improvement in intelligibility of coding gained, the highly authoritarian management controls which seem to be a major aspect of structured programming are a matter for concern.

The results of a study of

the management style of data processing managers presented at an IFIP conference in 1974 by Enid Mumford and Bo Hedberg gave a further cause for concern. Comparing British and Swedish managers, the British managers were found to be more Theory X in style compared with their Swedish counterparts. This reflects in no way on their technical competence. But it may indicate a relative lack of ability to put sound innovation into practice.

Isn't that something we've heard before?

On the move in Manchester
THE Manchester office of Computer Machinery Co has been moved to St James' House, Pendleton Way, Salford, Manchester; M6 5JA. The telephone number remains 061-737 8023.

Puzzle answer

The smallest set is 44-147-240, giving the perfect squares 125, 244 and 207. The next largest set is 88-234-480, and the next 85-132-720.

The sign of a better job.

You already know the Gemini name as the largest software group in Europe. Now we're the name to come to if you're looking for outstanding job opportunities — anywhere in the industry at any level.

How does our service differ from other recruitment agencies?

You'll be dealing with consultants who have an in-depth knowledge and experience and are therefore able to see things from your point of view because we're in the industry ourselves.

We're better able to make an assessment of your true worth. We'll never send you to an interview unless we feel you're right for the job... and it's the right move for your future.

You'll be advised of jobs that are not advertised — giving you that invaluable 'first crack' at the job. Where we think fit, we'll also recommend career opportunities that may not have occurred to you before. Interviews can be arranged anywhere in the UK or Europe.

How do you contact us?

We'll be appearing regularly in this position (inside back page) from now on. Just look for the advertisement with the 'G' border.

So now you know where to find the better jobs... on this page... at Gemini Recruitment.

GEMINI Recruitment

Ascii through the Logic Gate

An epic in 32K words, by Richard Forsyth

Block 2 (A Mental Block)

Hex has been taken prisoner at Sprocket's Hole and forced at gunpoint to switch off Ascii. Now he awaits his fate with resignation.

Sheriff Sprocket accepted the pipe from his partner and took a couple of deep breaths. A look of satisfaction settled on his features. Hex averted his eyes and sat with his head cast down, his mind so empty of ideas for escape it might have been running the mill job. He gazed at the floorboards in silence, losing all track of time.

Suddenly he was aware of a minotaurous rhythmic drone. He raised his eyes to look at the androids. There was Sprocket, slumped deep in the rocking chair with the rifle still cradled in his arms, fast asleep and snoring like an old walrus. Bill Bootstrap had actually slid off the bench and knelt against the table, his chin propped up by it, with a beatific smile on his face. The clay pipe had fallen from his lips and splintered into pieces on the floor. Beside it lay his shotgun.

At that moment, as Hex gaped in astonishment at this golden opportunity for deliverance, the door creaked gently open and Cleo crept into the room. In spite of his amazement, Hex was the first to speak.

"You raked your life," he said.

"So did you when you dragged me clear of the mob on the reservation," she answered, "and by coming here."

"How did you do it?"

"I knew when I overheard the Network news that they were expecting you, so I changed the hash coding algorithm in Bootstrap's dimensions into a vector. He got something stronger than he bargained for. Now he's gone into a hibernation state." She broke off as Davy Sprocket's body was rucked by a particularly convulsive snore. "Better get packing," she urged Hex, "we can't sit about talking all night."

"But I will take hours to power up Ascii safely."

"By which time Kluge and his inquisitors will be here. They're due early in the morning."

Hex looked down at Ascii's prone body, weighing the best part of a hundred kilograms, and scratched his chin. "I've had an idea," he said after a moment's thought. "Is there any wire in this godforsaken hole?"

"Well, there's a 25-pin cable leading from the teletype."

"Fine! This will only take a few minutes."

Hex went over to Bill Bootstrap and gingerly extracted from his limp hand the leather pouch containing all his worldly possessions which the android had confiscated. In it were the blueprint for an anti-dota "block noise" generator and the 40-pin microprocessor that Null had bequeathed to him. At the bottom was his soldering iron. He took it out and moved over to the archaic teletype.

Then watched in puzzlement and some impatience as he

"Yes, but if I just switch the juice on again he might have a head crash, or worse."

"If you don't want to risk it we'll have to carry him."

Hex looked down at Ascii's prone body, weighing the best part of a hundred kilograms, and scratched his chin. "I've had an idea," he said after a moment's thought. "Is there any wire in this godforsaken hole?"

"Well, there's a 25-pin cable leading from the teletype."

"Fine! This will only take a few minutes."

Hex went over to Bill Bootstrap and gingerly extracted from his limp hand the leather pouch containing all his worldly possessions which the android had confiscated. In it were the blueprint for an anti-dota "block noise" generator and the 40-pin microprocessor that Null had bequeathed to him. At the bottom was his soldering iron. He took it out and moved over to the archaic teletype.

Then watched in puzzlement and some impatience as he

ripped out the dota lead and brought it over to Ascii. "What's the idea?" she inquired.

"It's safe enough to turn on his motors," explained Hex, "but I'm worried about his logic circuits. I didn't have time to go through the proper shut-down procedures, you see, and his memory may have been scrambled. So I'm going to drive him by remote control. Then when we have time I can check all his circuits and restart him in the normal way."

"You mean you're going to rig him up as a peripheral unit?" she asked.

"Exactly. I wonder if you could give me a hand," Hex said holding out the connector. "If you look on the back of my head you'll see a socket marked 'Auxiliary I/O port'. Plug it in there."

Cleo plugged it in and Hex finished soldering the connection on Ascii. "Right," he said, "now before we try it out, you collect their weapons." Cleo carefully prised the rifle from under Sprocket's forearm, then picked up Bootstrap's shotgun.

"Okay, stand clear," advised Hex, "here we go!"

Cleo edged towards the door. Hex touched the live wire to Ascii's batteries. For a fraction of a second nothing happened. Then a red warning indicator flashed on Ascii's nose and the hut was filled with the screech of a siren.

"Motherboard!" swore Hex, throwing open the lid between Ascii's ears. His hand dived in and flicked a switch. There was peace once more. "I forgot to switch off the audio alarm," he apologised to Cleo.

"So I noticed," she replied.

Throughout it all Sprocket's regular snoring had continued uninterrupted. "It seemed louder than it was," added Hex in self-justification. "Anyway he's ready to roll now. Could you please open the door for us?"

Cleo pulled it open and made her exit into the night. Then Ascii jerked into motion under Hex's guidance and the pair of them, linked by two yards of wire, lurched drunkenly towards the door. Mercifully, they missed all the obstacles in their path.

When they rejoined Cleo outside Hex turned to shut the door behind them, then paused as if he had forgotten something.

"Wait a minute," he said, and pulled out the dota cord again. Before Cleo could voice her objections he had re-enslaved the hut and strode over to the now-defunct terminal in the corner. He switched it off-line and typed one word.

BYE.

Would Cleo be better off without her "rescuer"? Read next week's issue for her own opinions on the subject.

SENIOR SYSTEMS ANALYST

West End £6000 to £7300

An opportunity has arisen for an experienced and articulate Systems Analyst to progress into a more demanding and responsible position, leading and co-ordinating the work of a team of three other analysts.

The installation comprises an ICL 1903 machine running under GEORGE II, and an extensive Real Time system utilising DRIVER and COMMS MANAGER. Experience in any of these areas would be highly desirable, as would a programming background in either COBOL or PLAN.

You should have at least 4 years total DP experience, 2 years of which should be in Systems Analysis, and during this time you ought to have installed 2 major systems. The work will cover many different projects and will involve a wide area of systems and applications.

Reference JC 23/1

COBOL PROGRAMMERS

City £4000-£5000 plus Mortgage

A major financial organisation with an expanding ICL 2900 system is seeking several programmers for their city-based installation. These positions will be ideal for people with at least one year's commercial experience gained preferably on ICL equipment.

The company offers a high starting salary and an excellent benefits package including Season Ticket Loans, Flextime and a Mortgage Subsidy Scheme.

Reference JC 23/2

PL1 PROGRAMMERS

City £25000 plus mortgage

A major financial organisation needs programmers with 2 years good commercial experience to join their expanding DP department in the City. They currently operate a twin IBM 370/138 system, running under DOS/VS, and have a comprehensive communications network; so any knowledge of CICS would also be an advantage.

In addition to a competitive starting salary and excellent career prospects, the company offers interest-free Season Ticket Loans, free Life Insurance and an Annual Bonus scheme, and a 3% Mortgage.

Reference JC 23/3

SYSTEMS PROGRAMMER

City Negotiable

A large and highly respected financial institution is seeking a capable and imaginative OS/VS Systems Programmer to work in their City based installation. They are using two IBM machines — a 370/148 and a 370/158, running under OS/VS1 with VM/CMS.

The ideal candidate would have a general programming background preferably in ASSEMBLER or PL1, with a minimum of around 18 months in OS or OS/VS Systems Programming. Knowledge of IBM 370 Hardware and Software fundamentals is desirable as is any experience of performance measurement and estimation techniques.

Salary will be totally dependent upon ability and experience, and will not prove a limiting factor for the right person.

Reference JC 23/4

FORTRAN PROGRAMMERS

London £4000-£5000

A major engineering company located just south of the river near London Bridge Station requires an experienced Fortran programmer. The suitable applicant should have a degree in Applied Mathematics or Engineering and at least two years experience in Fortran, preferably on IBM equipment.

Dealing with users and other programmers you would gain experience in Scientific Applications, Straining, Thermo Dynamics etc and could expect good career progression and an above average salary.

Reference PG 23/3

COMMUNICATIONS PROGRAMMERS

Hartfordshire & North Kent £4000-£8000

A market leader in computer based communications equipment have a number of opportunities for engineers and programmers in the following areas:

- Real Time
- Software Engineering
- Compiler Software
- Data Communications
- Micro Processors

Experience in any of the above, possibly coupled with a degree, would lead to an excellent salary together with a generous benefit package which includes Flextime, 24 days Holiday, L.V.O. Generous relocation expenses and Subsidised Company products.

Reference PG 23/6

The quiet frequency converter

QUIETNESS of operation is one of the main features of a frequency converter now available to users of big computers like the IBM 370/158, 3033, and 4140 and Univac 1100/80. Called the Super Silent Block, it is built by Anton Piller (UK) Ltd and converts power from mains frequency to 441 Hz.

The Super Silent Block comes with an asynchronous motor and an AC generator mounted on the same shaft. The motor is housed, together with the associated control equipment, in a sound proof cabinet which reduces the noise level to 56 decibels (dB) measured at one metre. Anton Piller points out that this meets the NR-65 standard.

The Super Silent Block is supplied as a 75 kilowatt unit, but versions are available for different voltages and frequency requirements.

The input voltage is 380 volts or 415 volts at 50 Hz, and the output is 441 Hz, and the unit is 1.5 metres high and 1.5 metres wide.

Using a parallel unit also supplied by Anton Piller, up to eight converters can operate in parallel for greater capacity. Anton Piller added that there must be one more converter than the number of computers to two computers.

The Super Silent Block is 1.5 metres high and 1.5 metres wide, and the unit is 1.5 metres high and 1.5 metres wide.

Anton Piller (UK) Ltd, 100, 102, 104, 106, 108, 110, 112, 114, 116, 118, 120, 122, 124, 126, 128, 130, 132, 134, 136, 138, 140, 142, 144, 146, 148, 150, 152, 154, 156, 158, 160, 162, 164, 166, 168, 170, 172, 174, 176, 178, 180, 182, 184, 186, 188, 190, 192, 194, 196, 198, 200, 202, 204, 206, 208, 210, 212, 214, 216, 218, 220, 222, 224, 226, 228, 230, 232, 234, 236, 238, 240, 242, 244, 246, 248, 250, 252, 254, 256, 258, 260, 262, 264, 266, 268, 270, 272, 274, 276, 278, 280, 282, 284, 286, 288, 290, 292, 294, 296, 298, 300, 302, 304, 306, 308, 310, 312, 314, 316, 318, 320, 322, 324, 326, 328, 330, 332, 334, 336, 338, 340, 342, 344, 346, 348, 350, 352, 354, 356, 358, 360, 362, 364, 366, 368, 370, 372, 374, 376, 378, 380, 382, 384, 386, 388, 390, 392, 394, 396, 398, 400, 402, 404, 406, 408, 410, 412, 414, 416, 418, 420, 422, 424, 426, 428, 430, 432, 434, 436, 438, 440, 442, 444, 446, 448, 450, 452, 454, 456, 458, 460, 462, 464, 466, 468, 470, 472, 474, 476, 478, 480, 482, 484, 486, 488, 490, 492, 494, 496, 498, 500, 502, 504, 506, 508, 510, 512, 514, 516, 518, 520, 522, 524, 526, 528, 530, 532, 534, 536, 538, 540, 542, 544, 546, 548, 550, 552, 554, 556, 558, 560, 562, 564, 566, 568, 570, 572, 574, 576, 578, 580, 582, 584, 586, 588, 590, 592, 594, 596, 598, 600, 602, 604, 606, 608, 610, 612, 614, 616, 618, 620, 622, 624, 626, 628, 630, 632, 634, 636, 638, 640, 642, 644, 646, 648, 650, 652, 654, 656, 658, 660, 662, 664, 666, 668, 670, 672, 674, 676, 678, 680, 682, 684, 686, 688, 690, 692, 694, 696, 698, 700, 702, 704, 706, 708, 710, 712, 714, 716, 718, 720, 722, 724, 726, 728, 730, 732, 734, 736, 738, 740, 742, 744, 746, 748, 750, 752, 754, 756, 758, 760, 762, 764, 766, 768, 770, 772, 774, 776, 778, 780, 782, 784, 786, 788, 790, 792, 794, 796, 798, 800, 802, 804, 806, 808, 810, 812, 814, 816, 818, 820, 822, 824, 826, 828, 830, 832, 834, 836, 838, 840, 842, 844, 846, 848, 850, 852, 854, 856, 858, 860, 862, 864, 866, 868, 870, 872, 874, 876, 878, 880, 882, 884, 886, 888, 890, 892, 894, 896, 898, 900, 902, 904, 906, 908, 910, 912, 914, 916, 918, 920, 922, 924, 926, 928, 930, 932, 934, 936, 938, 940, 942, 944, 946, 948, 950, 952, 954, 956, 958, 960, 962, 964, 966, 968, 970, 972, 974, 976, 978, 980, 982, 984, 986, 988, 990, 992, 994, 996, 998, 1000.

Anton Piller (UK) Ltd, 100, 102, 104, 106, 108, 110, 112, 114, 116, 118, 120, 122, 124, 126, 128, 130, 132, 134, 136, 138, 140, 142, 144, 146, 148, 150, 152, 154, 156, 158, 160, 162, 164, 166, 168, 170, 172, 174, 176, 178, 180, 182, 184, 186, 188, 190, 192, 194, 196, 198, 200, 202, 204, 206, 208, 210, 212, 214, 216, 218, 220, 222, 224, 226, 228, 230, 232, 234, 236, 238, 240, 242, 244, 246, 248, 250, 252, 254, 256, 258, 260, 262, 264, 266, 268, 270, 272, 274, 276, 278, 280, 282, 284, 286, 288, 290, 292, 294, 296, 298, 300, 302, 304, 306, 308, 310, 312, 314, 316, 318, 320, 322, 324, 326, 328, 330, 332, 334, 336, 338, 340, 342, 344, 346, 348, 350, 352, 354, 356, 358, 360, 362, 364, 366, 368, 370, 372, 374, 376, 378, 380, 382, 384, 386, 388, 390, 392, 394, 396, 398, 400, 402, 404, 406, 408, 410, 412, 414, 416, 418, 420, 422, 424, 426, 428, 430, 432, 434, 436, 438, 440, 442, 444, 446, 448, 450, 452, 454, 456, 458, 460, 462, 464, 466, 468, 470, 472, 474, 476, 478, 480, 482, 484, 486, 488, 490, 492, 494, 496, 498, 500, 502, 504, 506, 508, 510, 512, 514, 516, 518, 520, 522, 524, 526, 528, 530, 532, 534, 536, 538, 540, 542, 544, 546, 548, 550, 552, 554, 556, 558, 560, 562, 564, 566, 568, 570, 572, 574, 576, 578, 580, 582, 584, 586, 588, 590, 592, 594, 596, 598, 600, 602, 604, 606, 608, 610, 612, 614, 616, 618, 620, 622, 624, 626, 628, 630, 632, 634, 636, 638, 640, 642, 644, 646, 648, 650, 652, 654, 656, 658, 660, 662, 664, 666, 668, 670, 672, 674, 676, 678, 680, 682, 684, 686, 688, 690, 692, 694, 696, 698, 700, 702, 704, 706, 708, 710, 712, 714, 716, 718, 720, 722, 724, 726, 728, 730, 732, 734, 736, 738, 740, 742, 744, 746, 748, 750, 752, 754, 756, 758, 760, 762, 764, 766, 768, 770, 772, 774, 776, 778, 780, 782, 784, 786, 788, 790, 792, 794, 796, 798, 800, 802, 804, 806, 808, 810, 812, 814, 816, 818, 820, 822, 824, 826, 828, 830, 832, 834, 836, 838, 840, 842, 844, 846, 848, 850, 852, 854, 856, 858, 860, 862, 864, 866, 868, 870, 872, 874, 876, 878, 880, 882, 884, 886, 888, 890, 892, 894, 896, 898, 900, 902, 904, 906, 908, 910, 912, 914, 916, 918, 920, 922, 924, 926, 928, 930, 932, 934, 936, 938, 940, 942, 944, 946, 948, 950, 952, 954, 956, 958, 960, 962, 964, 966, 968, 970, 972, 974, 976, 978, 980, 982, 984, 986, 988, 990, 992, 994, 996, 998, 1000.

Anton Piller (UK) Ltd, 100, 102, 104, 106, 108, 110, 112, 114, 116, 118, 120, 122, 124, 126, 128, 130, 132, 134, 136, 138, 140, 142, 144, 146, 148, 150, 152, 154, 156, 158, 160, 162, 164, 166, 168, 170, 172, 174, 176, 178, 180, 182, 184, 186, 188, 190, 192, 194, 196, 198, 200, 202, 204, 206, 208, 210, 212, 214, 216, 218, 220, 222, 224, 226, 228, 230, 232, 234, 236, 238, 240, 242, 244, 246, 248, 250, 252, 254, 256, 258, 260, 262, 264, 266, 268, 270, 272, 274, 276, 278, 280, 282, 284, 286, 288, 290, 292, 294, 296, 298, 300, 302, 304, 306, 308, 310, 312, 314, 316, 318, 320, 322, 324, 326, 328, 330, 332, 334, 336, 338, 340, 342, 344, 346, 348, 350, 352, 354, 356, 358, 360, 362, 364, 366, 368, 370, 372, 374, 376, 378, 380, 382, 384, 386, 388, 390, 392, 394, 396, 398, 400, 402, 404, 406, 408, 410, 412, 414, 416, 418, 420, 422, 424, 426, 428, 430, 432, 434, 436, 438, 440, 442, 444, 446, 448, 450, 452, 454, 456, 458, 460, 462, 464, 466, 468, 470, 472, 474, 476, 478, 480, 482, 484, 486, 488, 490, 492, 494, 496, 498, 500, 502, 504, 506, 508, 510, 512, 514, 516, 518, 520, 522, 524, 526, 528, 530, 532, 534, 536, 538, 540, 542, 544, 546, 548, 550, 552, 554, 556, 558, 560, 562, 564, 566, 568, 570, 572, 574, 576, 578, 580, 582, 584, 586, 588, 590, 592, 594, 596, 598, 600, 602, 604, 606, 608, 610, 612, 614, 616, 618, 620, 622, 624, 626, 628, 630, 632, 634, 636, 638, 640, 642, 644, 646, 648, 650, 652, 654, 656, 658, 660, 662, 664, 666, 668, 670, 672, 674, 676, 678, 680, 682, 684, 686, 688, 690, 692, 694, 696, 698, 700, 702, 704, 706, 708, 710, 712, 714, 716, 718, 720, 722, 724, 726, 728, 730, 732, 734, 736,
